Ākonga Evidence Template
My Passion Page

Exemplar: made-up work at the expected standard (4A), not a real ākonga's. Use it to see what complete work looks like. Your page needs your own topic, words and photos.

Name	Exemplar ākonga
Class	9DGT

How to use this template

- Fill this in as you go. Your kaiako looks at it at each checkpoint.
- Type in the boxes. Tables grow as you type; add rows if you need more.
- Don't share this document with anyone.
- Your code is judged from your zip, so you don't need screenshots of your code or page.

Checkpoints with your kaiako

Your kaiako gives you general feedback at each checkpoint.

Checkpoint	What to show	Date
Checkpoint 1 (end of Week 1)	Part 1: your plan and wireframe	Fri 30/10/26
Checkpoint 2 (end of Week 2)	Your page in Live Server, and Part 2	Fri 6/11/26

Part 1: Plan

Evidence for: Planning and design, Reader, ethics and privacy

- Type this from your handwritten "Writing my page" sheet. Your answers become the words on your page.

The top of my page

Part	My words
`<title>` (shows in the browser tab)	Wharf Fishing for Beginners
`<h1>` (the big heading, a few words)	Let's Go Wharf Fishing!
My reader (one real person or group)	My little brother. He is 9 and has never been fishing.
What my reader needs from my page	He needs to know what to bring, where to go, how to stay safe and which fish he can keep. He needs easy words because long pages are hard for him.

Opening paragraph

Fishing off a wharf is one of the best things to do in Auckland, and you don't need a boat. I started going when I was ten, and now I want to show you how. This page tells you what to bring, where to go and the rules you need to know.

My three sections

Section	`<h2>` heading (your question, shortened)	`<p>` text (2–3 sentences)
Section 1	What do I need?	You need a short rod with a reel, some hooks, sinkers and bait. Pilchards and squid make good bait, and you can buy them frozen at a bait shop. Bring a bucket, a towel, sunscreen and a drink too.
Section 2	Where can I go?	Lots of Auckland wharves are good for fishing, like Okahu Bay, Torpedo Bay in Devonport and Murrays Bay. Always go with an adult and stay back from the edge, especially when it is wet. Watch out for people casting near you.
Section 3	What are the rules?	A snapper has to be at least 30 cm long before you can keep it, and you can only keep 7 each per day. Put small fish back gently. Take your rubbish and old fishing line home.

My pictures

File name (lowercase, no spaces)	Where it came from (my photo, or the website)	Alt text (one sentence)
wharf-sunset.jpg	My photo. I took it at the wharf.	A wooden wharf at sunset with a fishing rod leaning on the railing.
my-fishing-gear.jpg	My photo of my own gear.	My fishing gear on the wharf: a rod and reel, an orange bucket, a box of hooks and a pack of frozen pilchards.
snapper-size.png	I made it in Draw.io.	A drawing of a snapper next to a ruler, showing it must be at least 30 cm long to keep.

My colours

	Colour (name or code)
Background	Light blue #e8f4fa
Headings	Dark blue #0b3c5d
Text	Very dark grey #222222

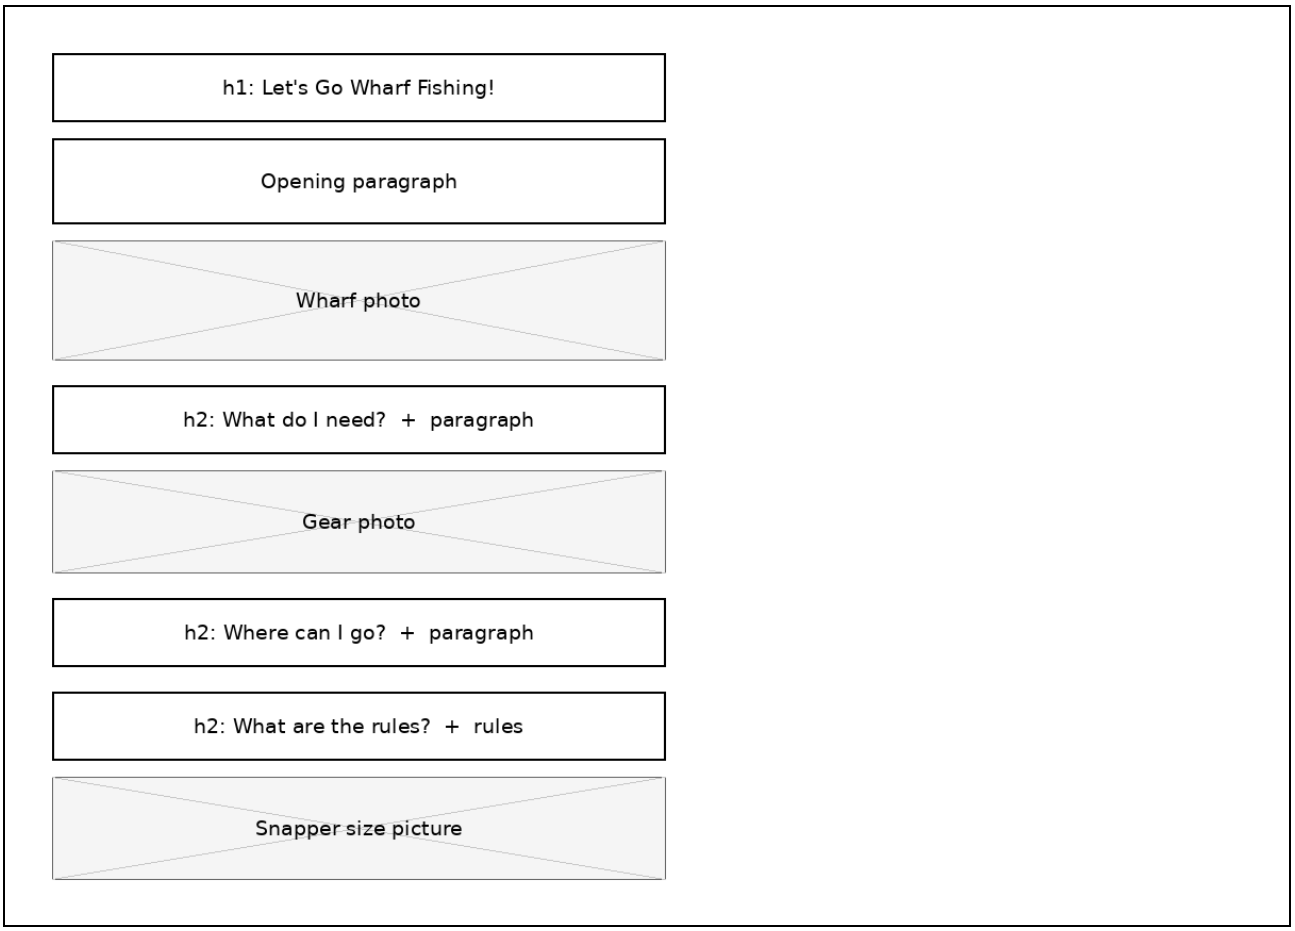

How my plan suits my reader

How your content, images, colours and layout meet your reader's needs.

My brother is 9, so I used short sentences and easy words. My three sections answer his three big questions: what to bring, where to go and the rules. I picked a photo of my gear so he can see what to bring, and a snapper picture so he can see how big 30 cm is. The light blue looks like the sea, and the dark text is easy for him to read.

My wireframe

Redraw your paper sketch in Draw.io, then paste your `wireframe.drawio.png` here.

Part 2: Build

Evidence for: Building the page, Software and file types, File management, Testing, feedback and improving

- Your kaiako judges your code from your zip, so no screenshots of code are needed.

Problems I fixed while building

What went wrong	How I fixed it
My colours and font didn't show at all.	My link said style.css but I had named the file styles.css. I renamed the file to style.css.
The gear photo didn't show. Only the alt text showed.	The path said image/my-fishing-gear.jpg but the folder is called images. I added the s.
Everything after my second heading was big and bold.	I forgot the closing </h2> tag. I added it.

My software and file choices

Choice	What I chose	What it does, or a key feature that helped	Why it suits my page better than another option
Software to write my code	VS Code	It is a code editor. It colours the tags so I can see mistakes.	It is on the school computers and it is made for writing code.

Choice	What I chose	What it does, or a key feature that helped	Why it suits my page better than another option
Software to preview my page	Live Server	It opens my page in Chrome and updates it every time I save.	I don't have to keep pressing refresh.
Software to draw my wireframe	Draw.io (in VS Code)	It lets me draw boxes to plan where things go.	It works inside VS Code, so I didn't need another app.
File type for my photos	.jpg	JPG is the normal file type for camera photos.	My photos have lots of colours, and JPG keeps them small so the page loads fast.
File type for my other images	.png	PNG keeps lines and writing sharp.	My snapper picture is a drawing with writing on it.
Where my CSS goes	style.css	It holds all my colours and fonts.	So all my styles are in one place.

My folder and file names

How you organised `my-page`, why the naming rules matter, and how saving in Google Drive keeps your work safe.

My my-page folder has index.html, style.css, wireframe.drawio.png and an images folder with my three pictures. All my file names are lowercase with dashes instead of spaces, because the instructions said to. I saved everything in Google Drive so I can open it on any school computer.

Part 3: Test, get feedback and improve

Evidence for: Testing, feedback and improving, Planning and design, Reader, ethics and privacy

My tests

Test	What happened	What I changed
Every image shows	All three show now. The gear photo didn't show at first (see Problems I fixed).	Nothing more.
Every `<img>` has alt text	I checked each <img> tag in index.html. The snapper picture had alt="" with nothing in it.	I wrote alt text for the snapper picture.
Text is easy to read on the background	Dark blue headings and dark grey text are easy to read on light blue.	Nothing.
Page fits a narrow Chrome window	The wharf photo went off the side and I had to scroll sideways.	I added img { max-width: 100%; } to style.css. Now the pictures shrink to fit.

Test	What happened	What I changed
My own test: the headings are in order	I have one h1 and then three h2s, in the right order.	Nothing.

Gallery walk feedback

Classmate's first name	What they said	What I changed
Mere	The rules part is really useful, but it's one big block of text. Make it a list.	I changed the rules into a list using and tags.
Tama	Add a picture of what the bait looks like.	I didn't change this. I ran out of time before the due date.

Evaluation

How well your page suits your reader. Use your reader's needs, your tests and the feedback. Include changes from your plan and what you would improve next.

I think my page suits my brother. It uses easy words and answers his questions about what to bring, where to go and the rules. All my tests work now. Mere's feedback made the rules easier to read, so I changed them from a paragraph into a list, which is different from my plan. Next time I would add a picture of the bait like Tama said.

Helping my reader and keeping it safe

How your alt text, colours and wording help your reader, including someone who can't see the images. Your privacy choices and why they matter.

My alt text says what is in each picture, so if a picture doesn't load my brother still knows what it shows. I used dark text on a light background so it is easy to read. I didn't put my name, my school or where I live on the page, and my photos don't show anyone's face.

Sources and help I used

List every source you used: websites, videos, code, images, and people who helped you. Add a link where you can.

Source (title and link, or who helped)	What I used it for
NZ Fishing Rules app (Ministry for Primary Industries)	Checking the snapper size and how many you can keep.
mpi.govt.nz, Auckland and Kermadec fishing rules page	Checking the rules again for my rules section.
My dad	Telling me which wharves are good for kids.

Generative AI use

You must **not** use generative AI (tools that write text, code or images for you) at any stage. This includes Copilot in VS Code, Gemini in Google Docs or Classroom, ChatGPT and AI image makers.

Your own work

Read the Marcellin College Plagiarism poster. Copying, even one sentence, is plagiarism.

Work that is plagiarised is not graded, and "PLG" goes on your report.
