Add images and sounds

Digital Technologies · School computers

You will

- keep your art and sounds in an `assets` folder
- put an image on a node, and make pixel art sharp
- add a sound that plays when the game starts

You need

- your Godot project open (see the guide Make a Godot project)
- a Sprite2D node to show the image on (see the guide Add nodes and attach a script)
- an image (.png) and a sound (.mp3, .ogg or .wav) in Downloads

Before you start

- File names: lowercase, with underscores. No spaces or brackets.
- Only use art and sounds you're allowed to use, and write down where each one came from.

 Click here  Look here

1

File Explorer › Downloads

Open the folder with the image you want.

Find the image. This guide uses `Jump (32x32)` from the Ninja Frog folder.

Many character files are strips of animation frames. A file with one picture in it is easiest to start with.

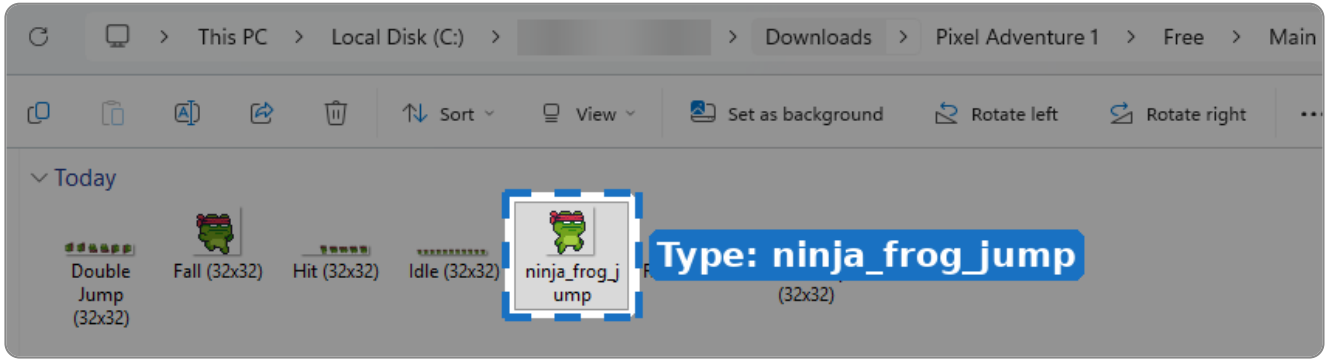

2

File Explorer › Rename

Click the image, then press F2 (or right-click it and click Rename).

Type a new name, like `ninja_frog_jump`, and press Enter.

Windows hides the `.png` on the end, so leave it off.

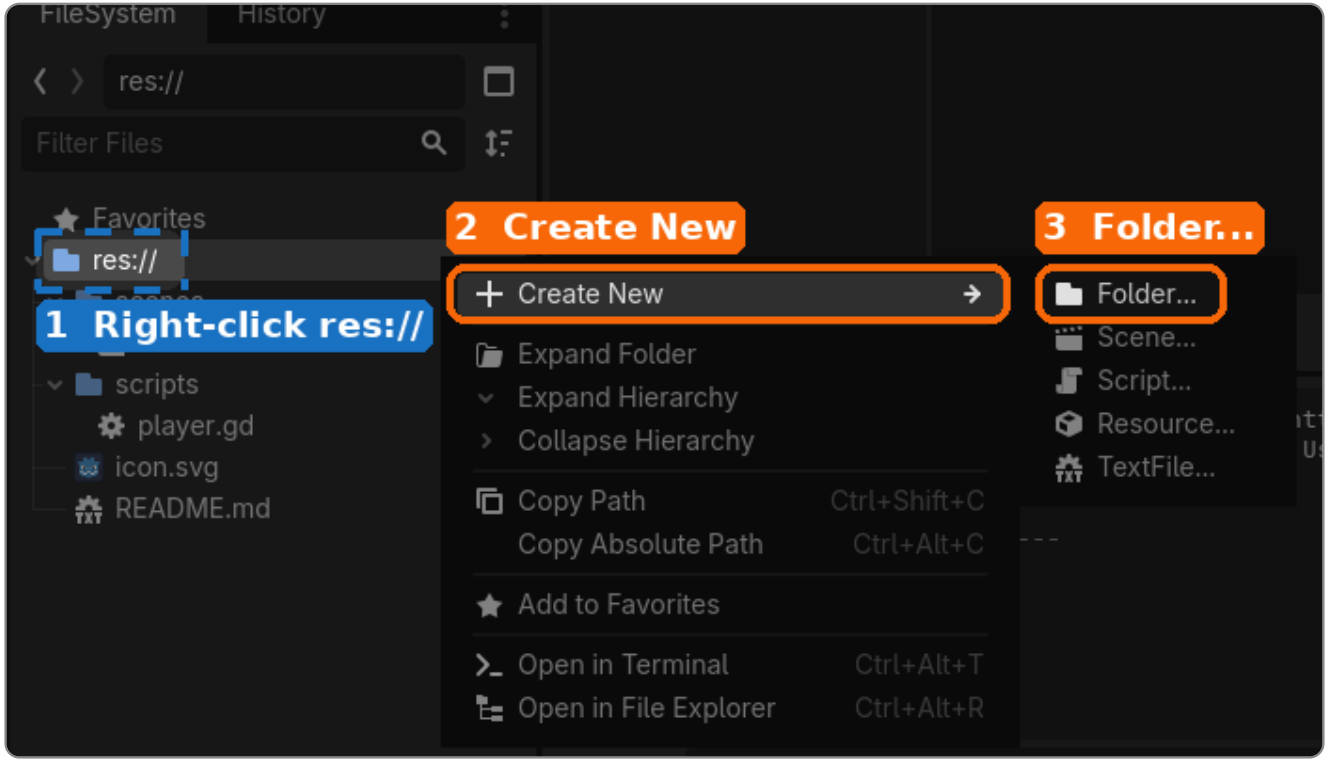

3

Godot › FileSystem

Right-click `res://`.

Click **Create New** › **Folder...**

Already have an `assets` folder? Skip this step and the next one.

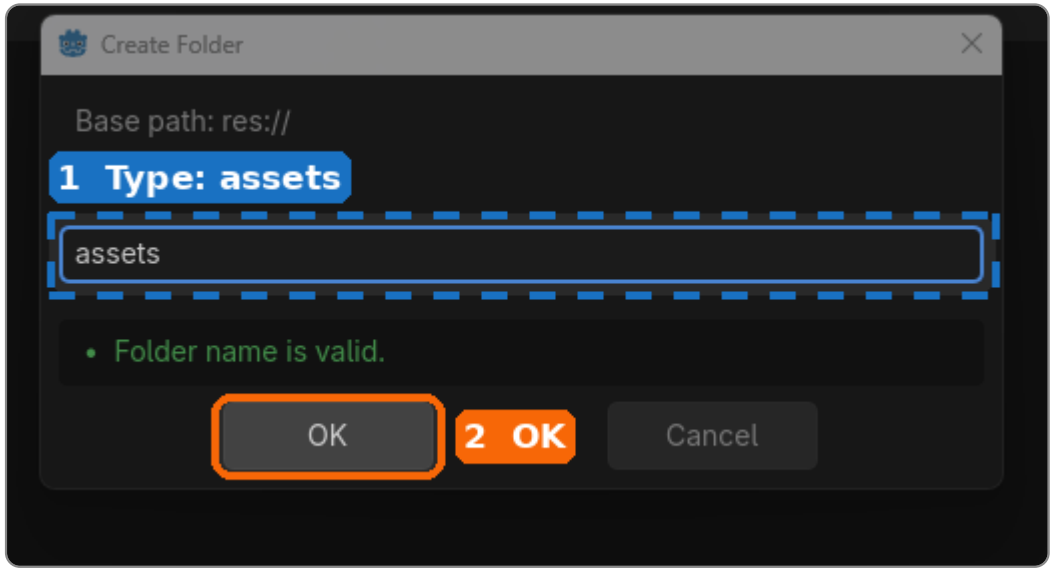

4

Godot › Create Folder

Type `assets`, all lowercase.

Click **OK**.

5

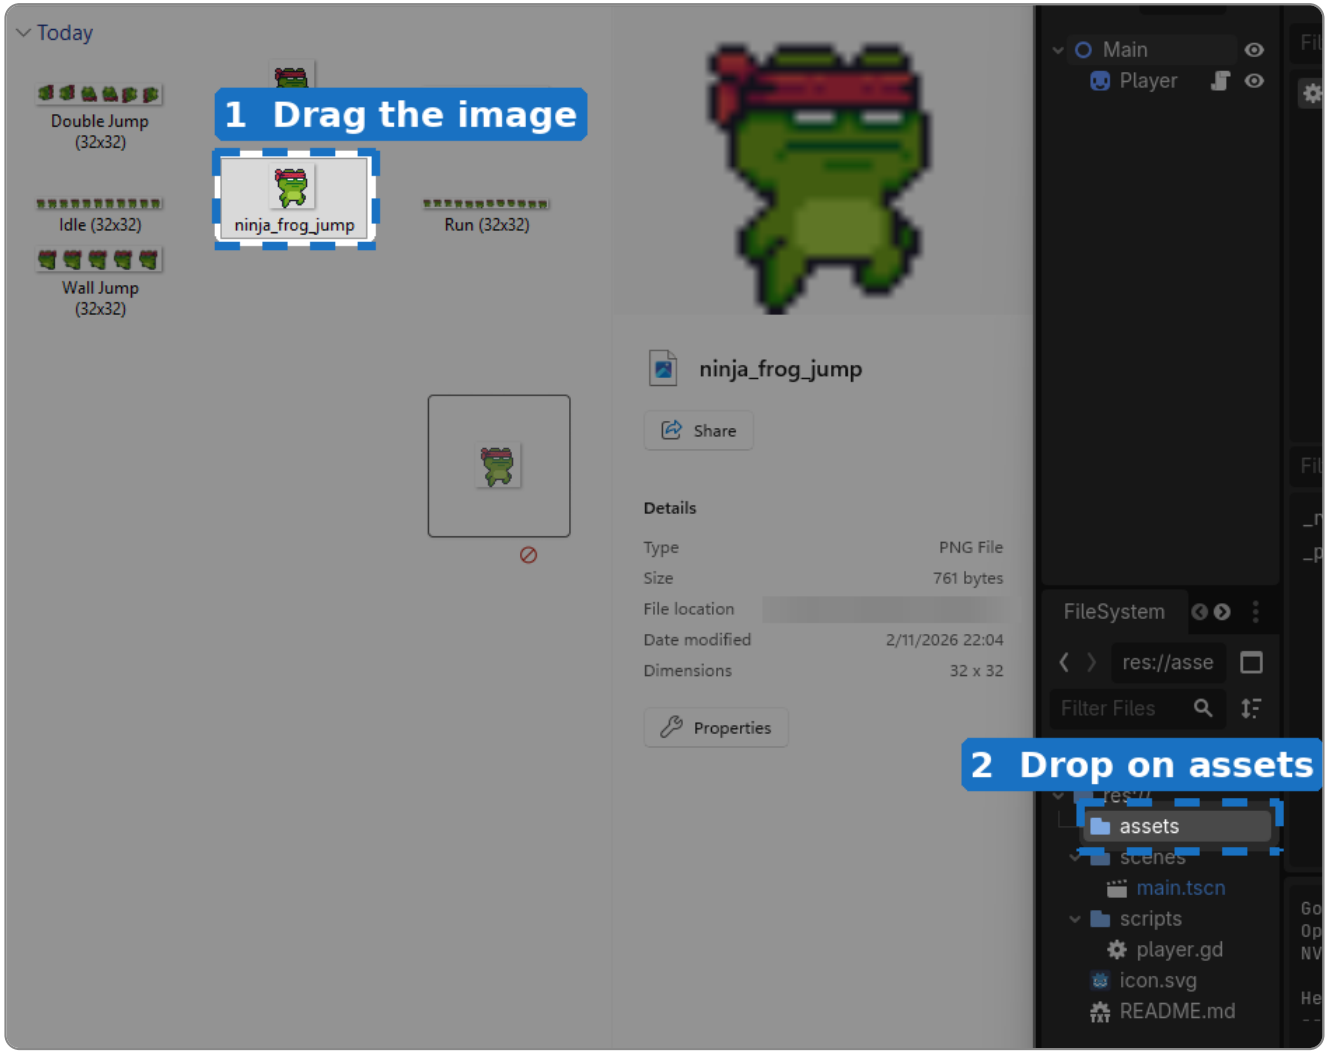

File Explorer and Godot › side by side

Put File Explorer and Godot side by side.

Drag your image onto the `assets` folder in Godot's FileSystem.

Godot copies the file into your project. The original stays in Downloads.

> **Check:** your image is inside `assets`.

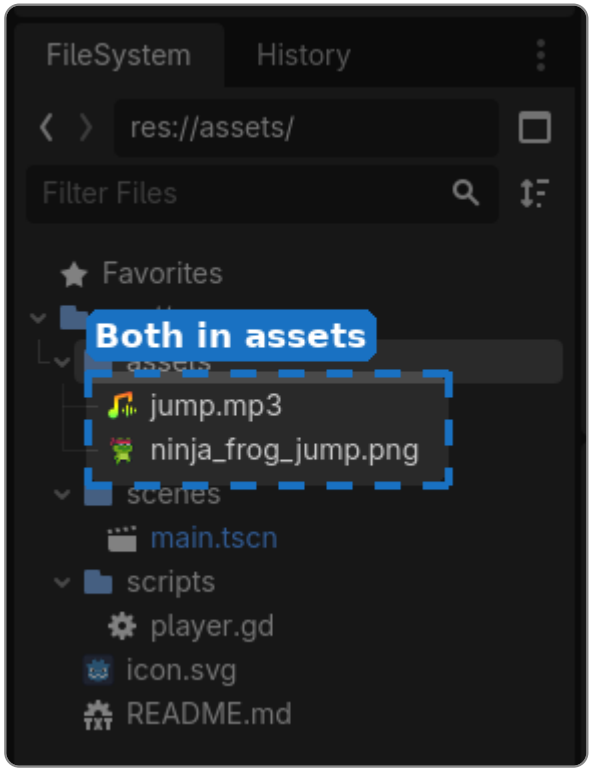

6

Godot › FileSystem › assets

Rename your sound file the same way, like `jump`.

Drag it onto `assets` too.

> **Check:** `assets` has your sound and your image.

7

Godot › 2D › Inspector

Click **2D** at the top, then click your Sprite2D node in the Scene dock (here, **Player**).

Drag your image from FileSystem onto **Texture** in the Inspector.

> **Check:** your image shows in the scene.

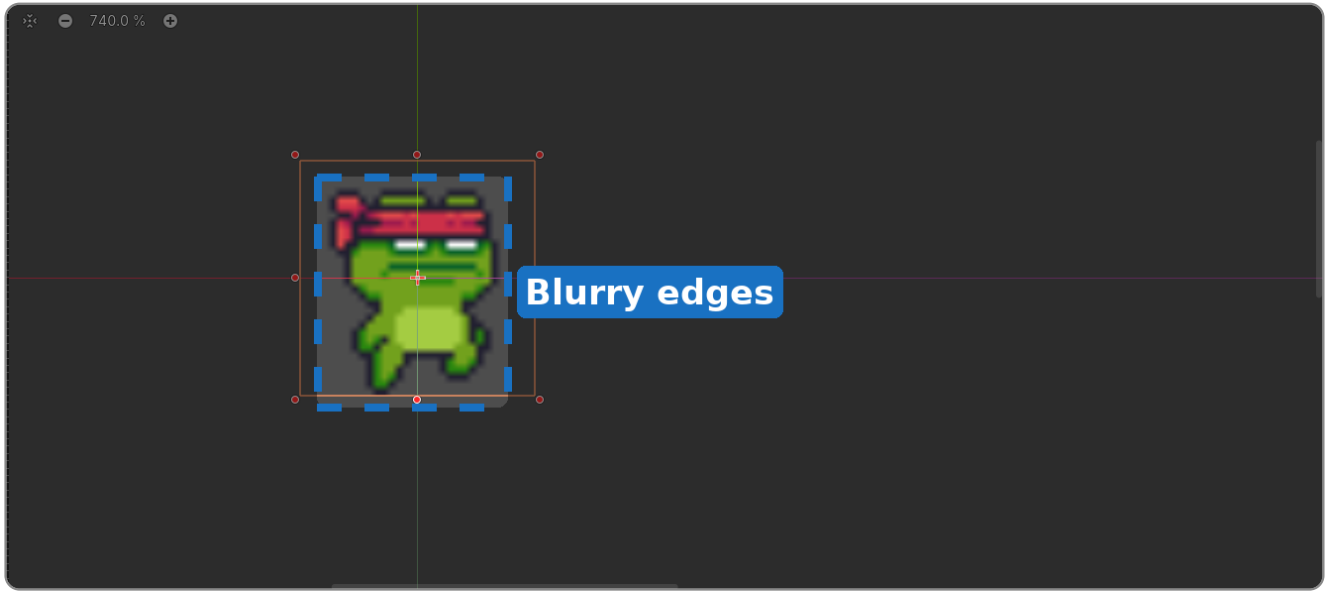

8

Godot › 2D view

Point at the 2D view and scroll to zoom in on your image.

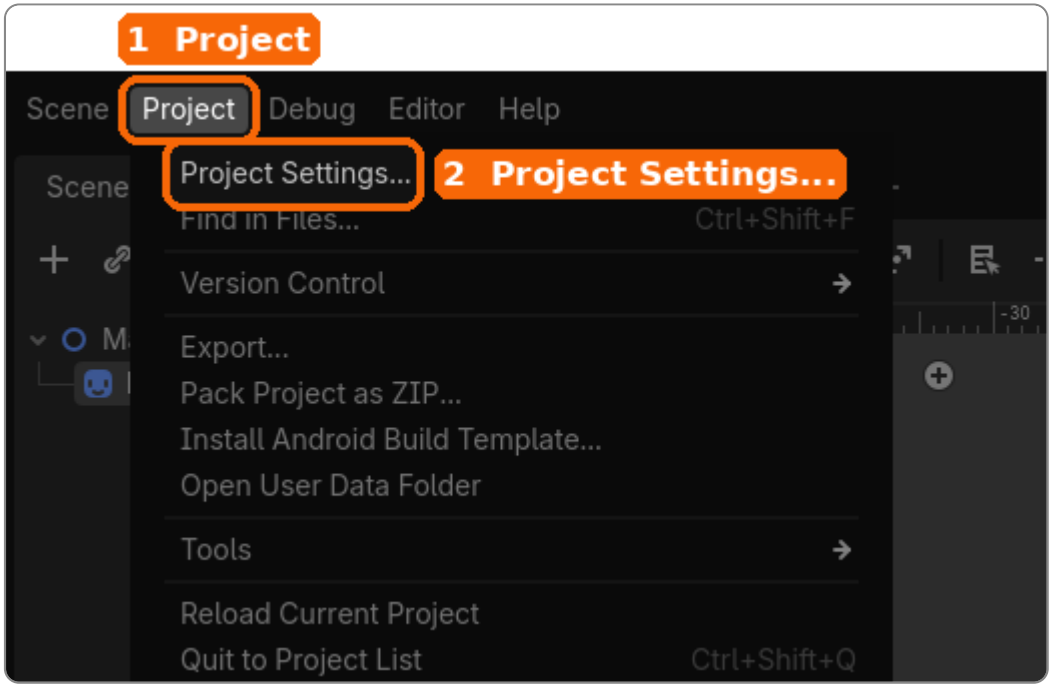

Pixel art looks blurry at first. The next steps make it sharp, once for the whole project.

9

Godot › Project menu

Click **Project** › **Project Settings...**

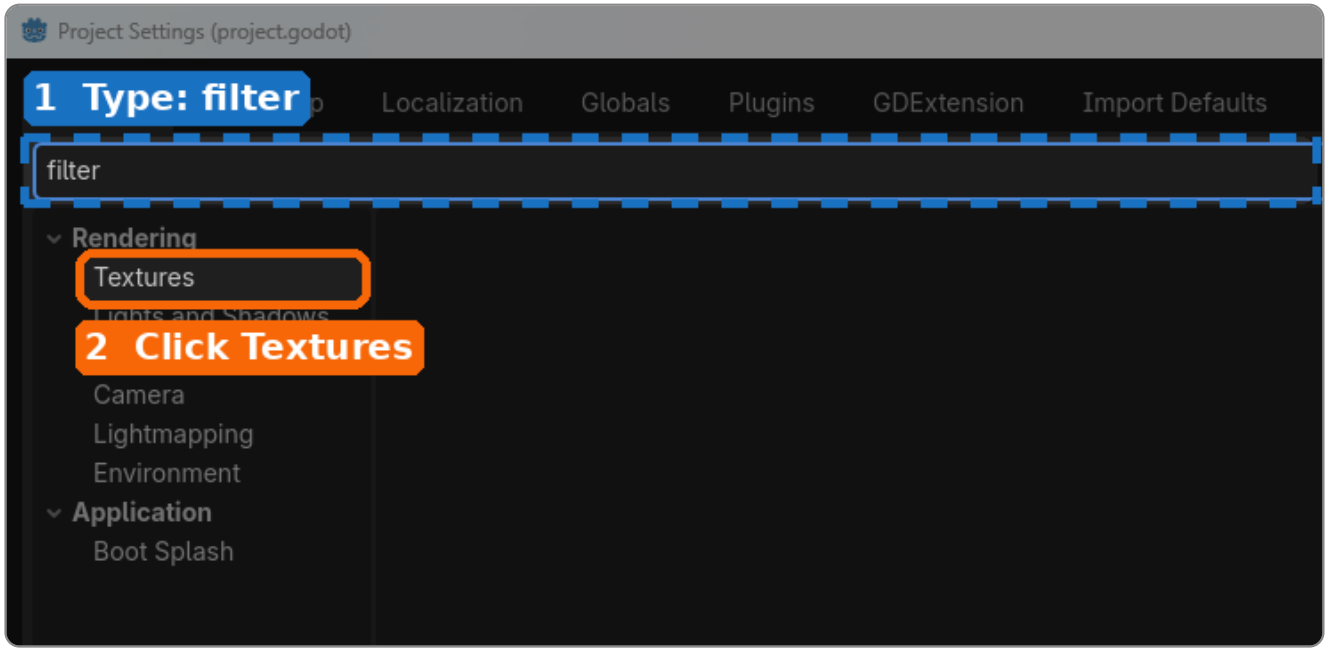

10

Godot › Project Settings

In the search box, type `filter`.

Under **Rendering**, click **Textures**.

> **If something goes wrong**
> **Nothing appears:** turn on **Advanced Settings** (top right).

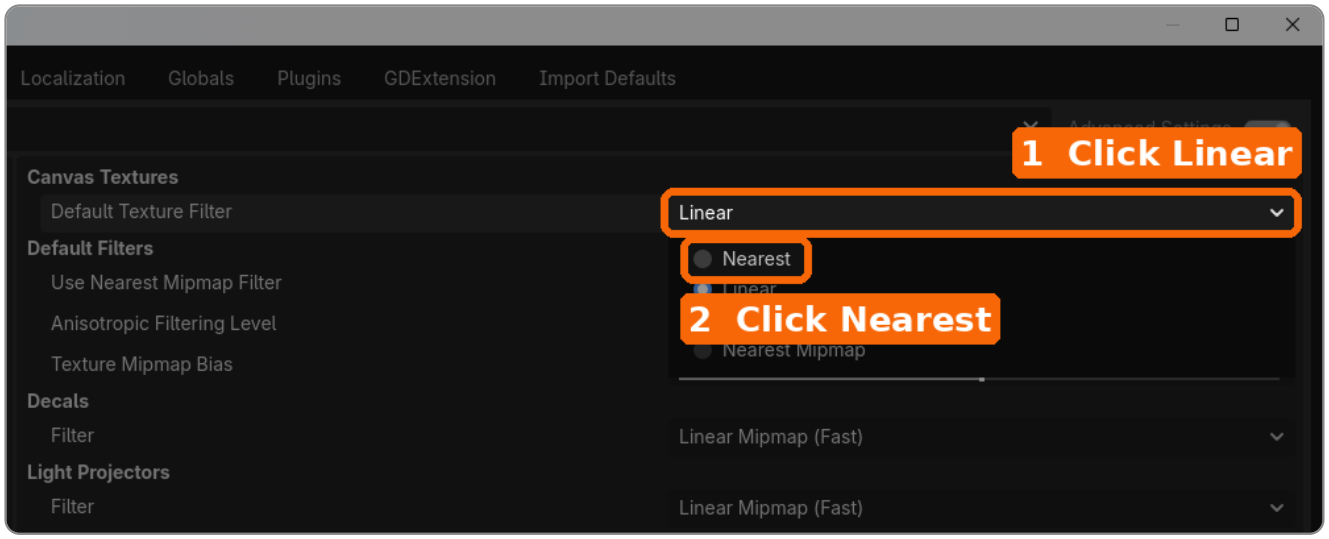

11

Godot › Project Settings › Textures

Next to **Default Texture Filter**, click **Linear**.

Click **Nearest**.

Nearest keeps each pixel square and sharp.

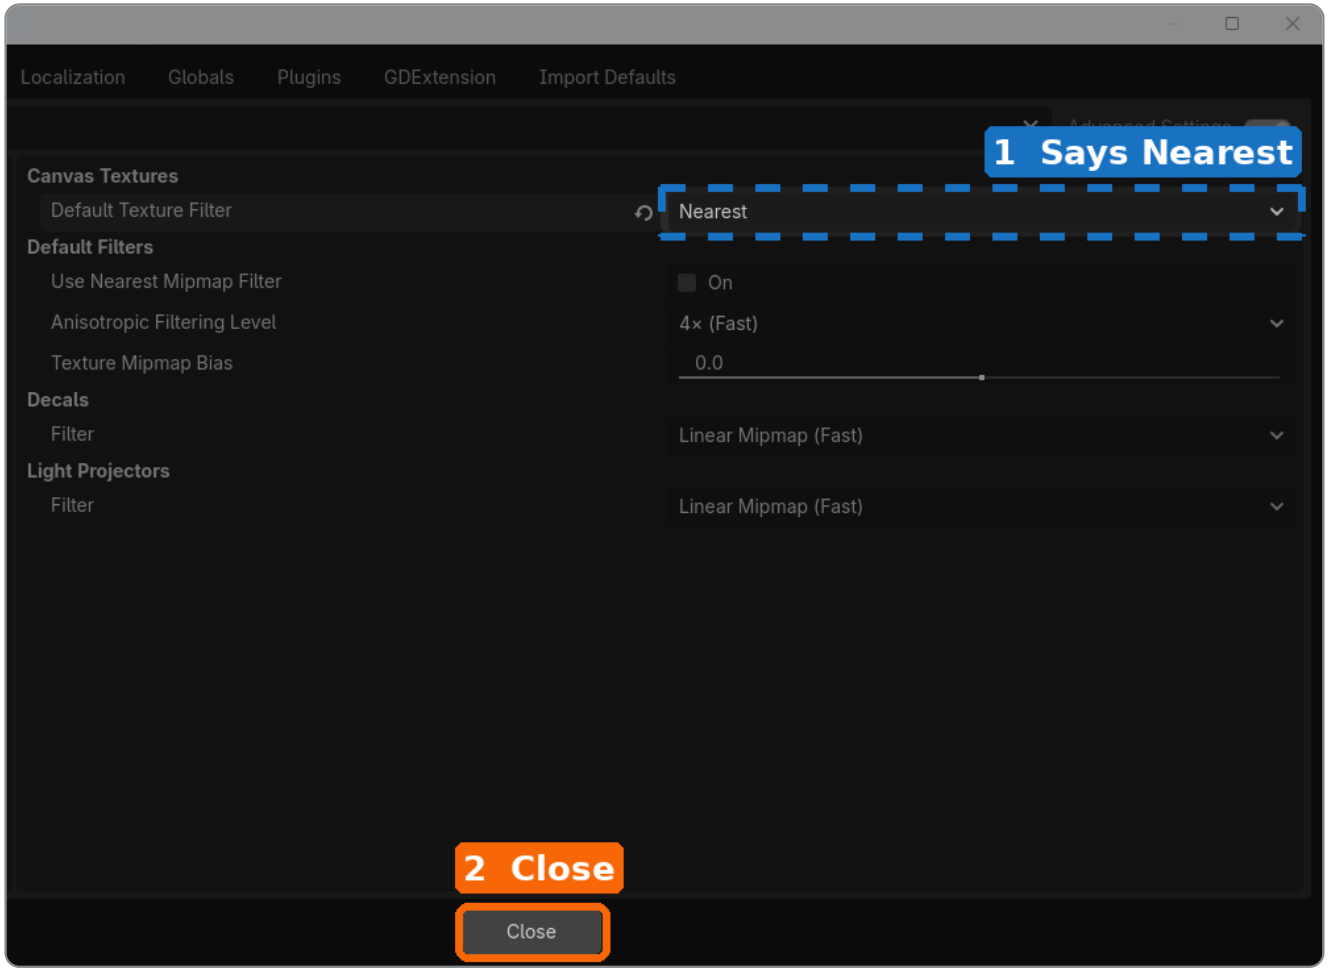

12

Godot › Project Settings › Textures

Check it says **Nearest**.

Click **Close**.

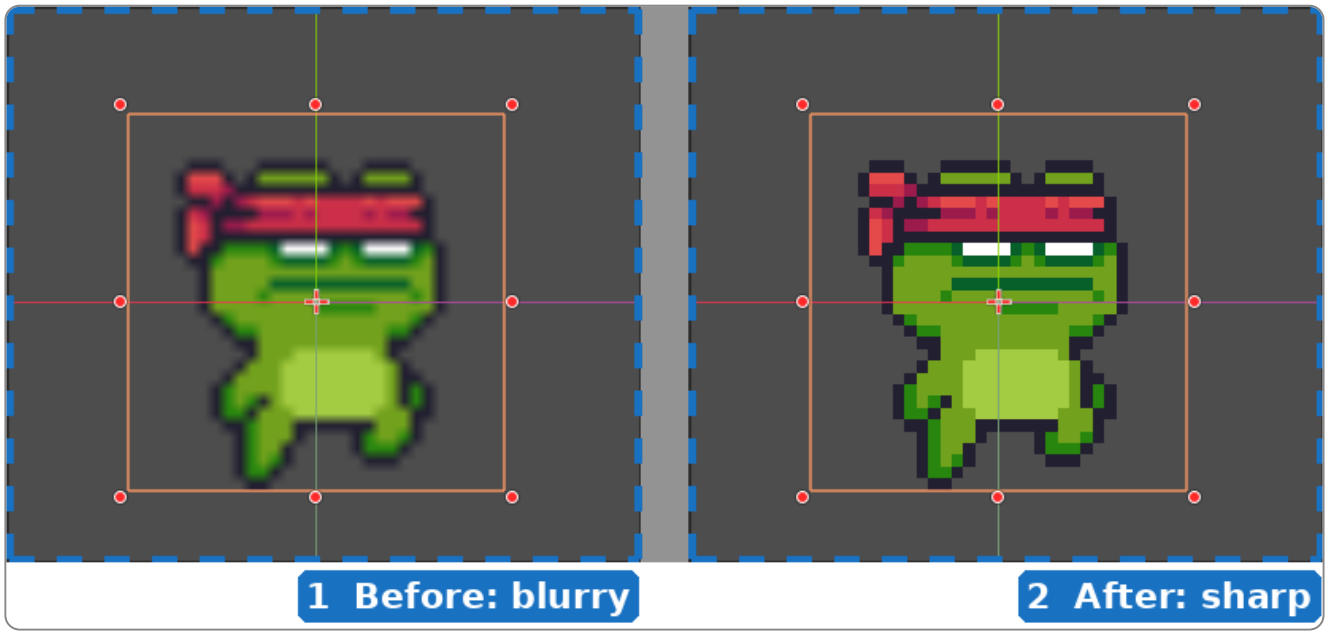

13

Godot › 2D view

Look at your image again.

Every pixel art image in this project is now sharp, including ones you add later.

> **Check:** your image has sharp, square pixels.

14

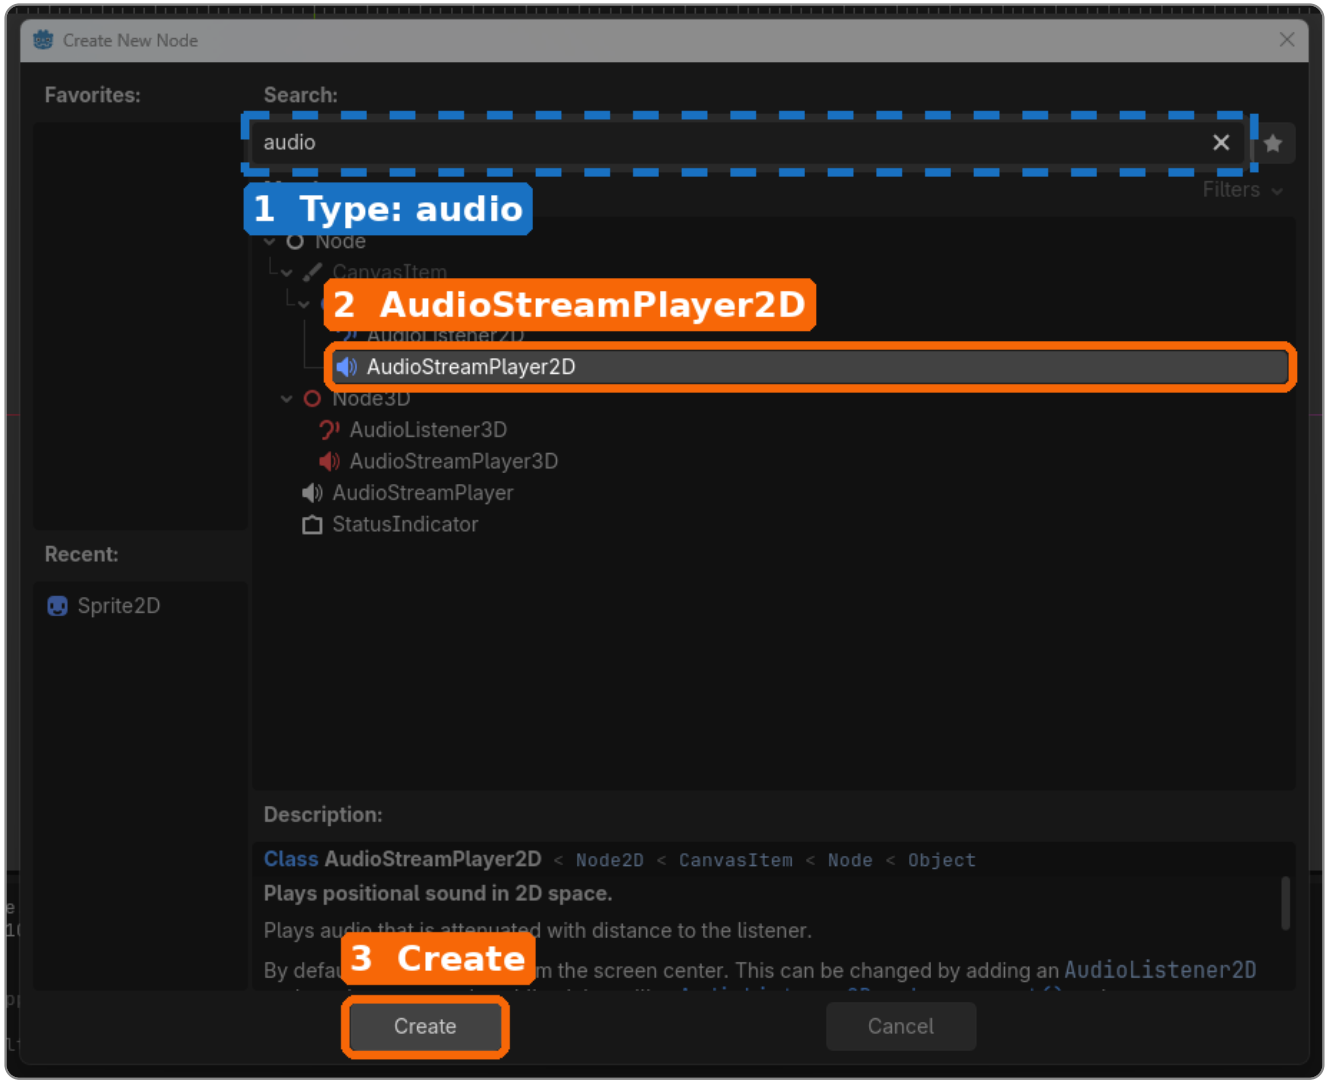

Godot › Create New Node

Click the node the sound belongs to (here, **Player**), then click **+** (or press `Ctrl` + `A`).

Type `audio`.

Click **AudioStreamPlayer2D**, then **Create**.

Adding it under a node keeps the sound with that node.

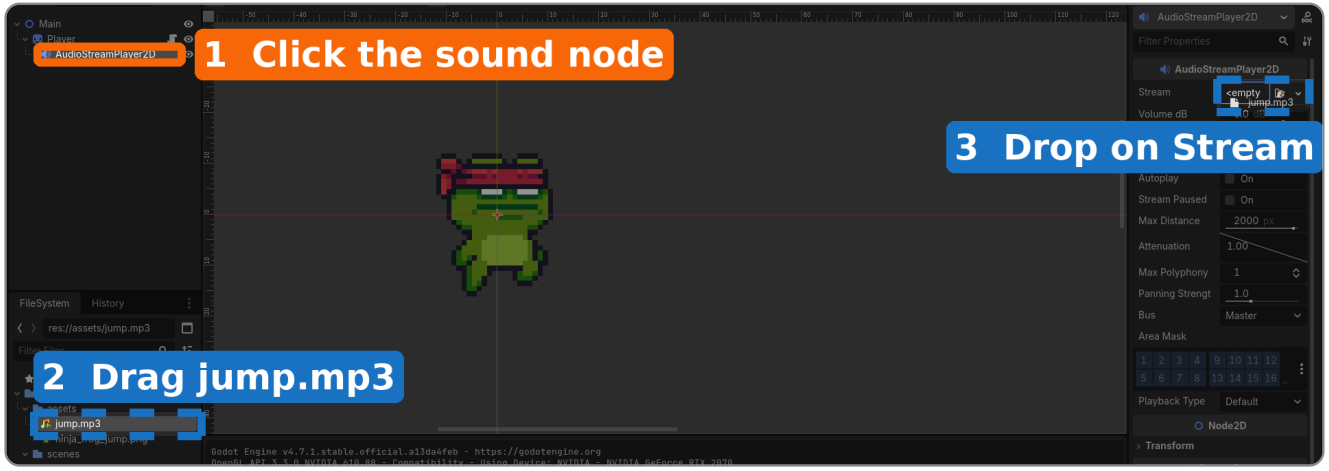

15

Godot › Inspector

Click the new **AudioStreamPlayer2D** in the Scene dock.

Drag your sound from FileSystem onto **Stream** in the Inspector.

> **Check: Stream** shows your sound's name.

16

Godot › Inspector › Stream

Click the play button above your sound's name to listen.

Tick **Autoplay**.

Autoplay plays the sound once when the game starts. Later, your code can play it at the right moment, like when the player jumps.

17

Godot › Your game window

Press Ctrl + S, then F5.

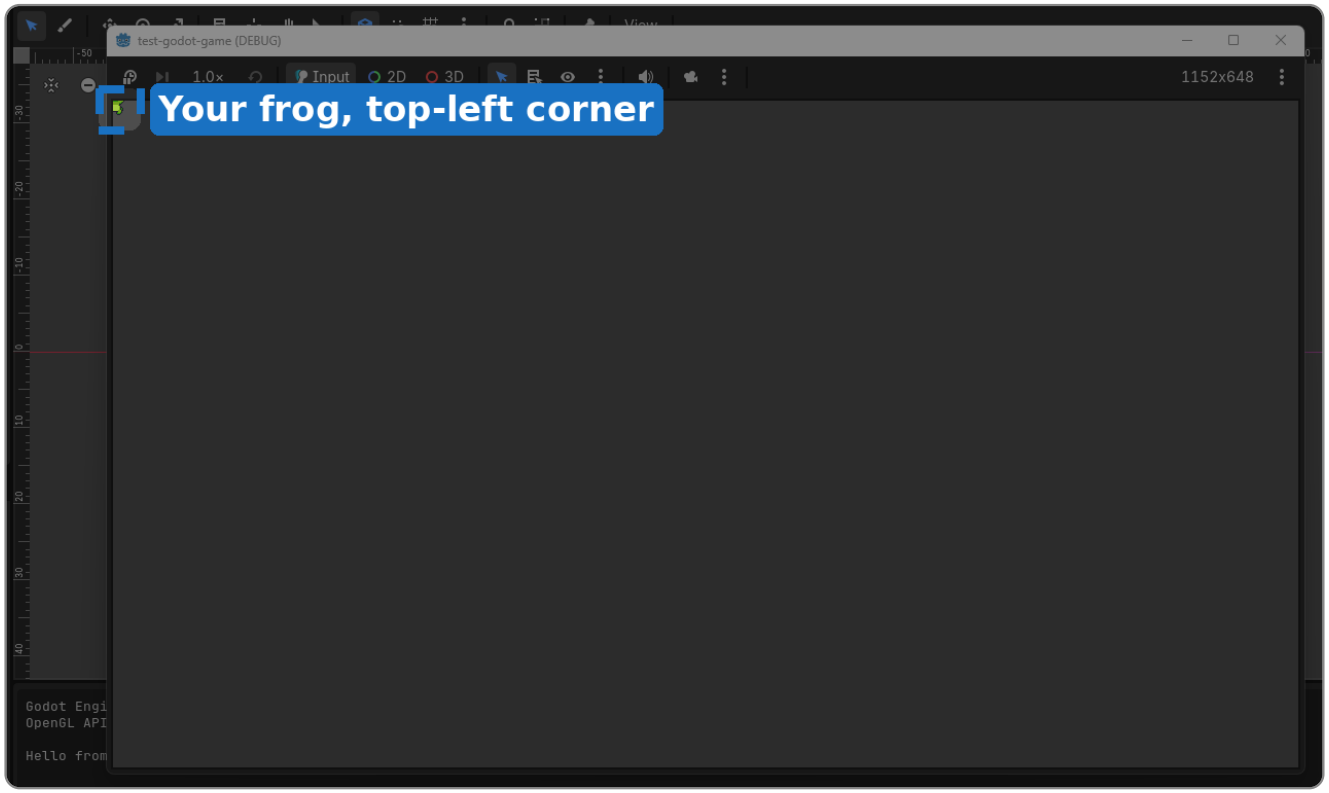

Listen for your sound.

Press F8 to stop.

Your image is small and in the corner. To move it, drag your node into the blue rectangle in the 2D view.

> **Check:** you hear your sound when the game starts.

If something goes wrong
No sound: check your headphones or volume, and that Autoplay is ticked.

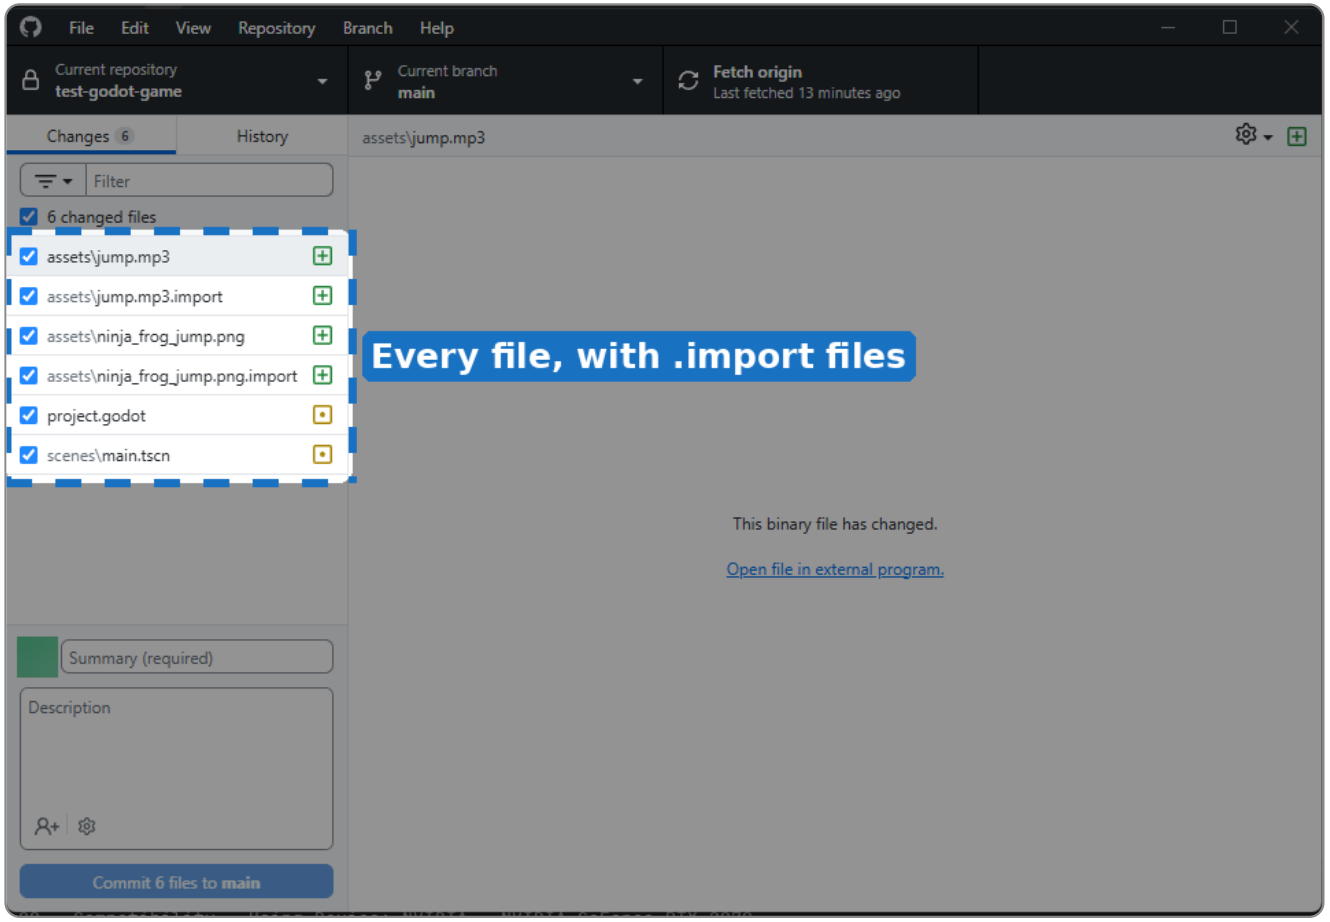

18

GitHub Desktop › Changes › if your project is on GitHub

Commit and push with GitHub Desktop, as usual.

Keep every file ticked, including the `.import` files.

Godot makes a `.import` file for each image and sound. It needs them on other computers too.

Credit your assets

In `README.md`, write each image and sound's name, who made it and where you got it. Do it when you add the file, so you don't forget.

Used in this guide

Art: Pixel Adventure 1 by Pixel Frog (CC0), pixelfrog-assets.itch.io.
Sound: Jump Sound by Aryan Raikundalia, from Pixabay.

Checkpoint

- [ ] My images and sounds are in `assets`, with lowercase names.
- [ ] My pixel art looks sharp.
- [ ] I can add a sound and hear it play.
