Add nodes and attach a script

Digital Technologies · School computers

You will

- add a node to a scene and give it a clear name
- attach a script, saved in the `scripts` folder

You need

- your Godot project open, with a scene open

Before you start

- Projects keep scenes in `scenes`, scripts in `scripts`, and images and sounds in `assets`.
- File names: lowercase, with underscores instead of spaces.

 Click here  Look here

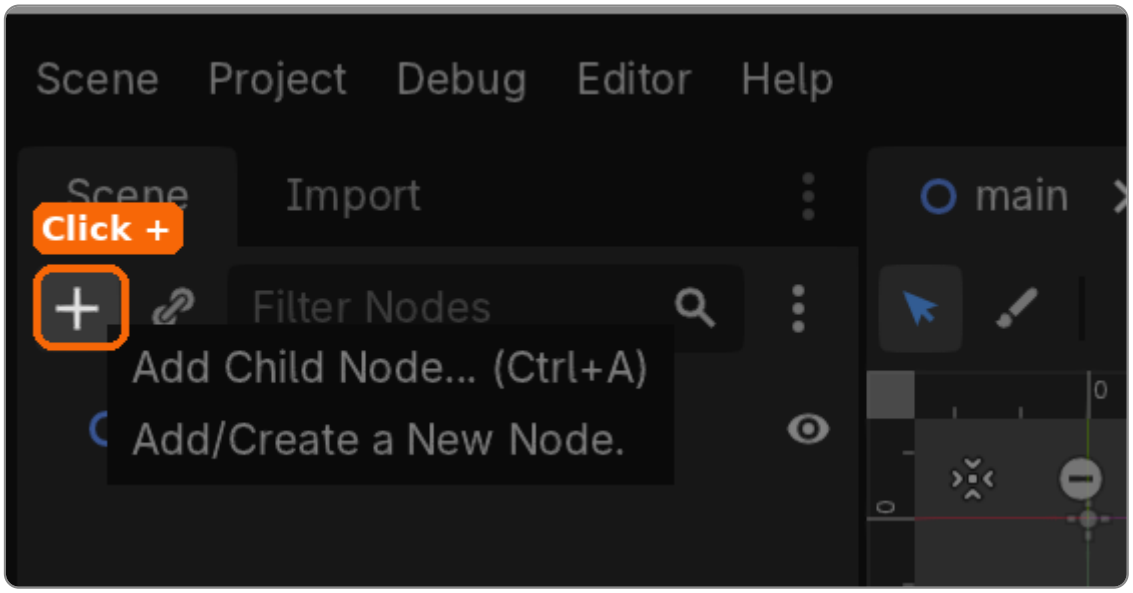

1

Godot › Scene dock

Click the node you want to add to (usually the top one).

Click **+** (Add Child Node).

Or press `Ctrl` + `A`.

2

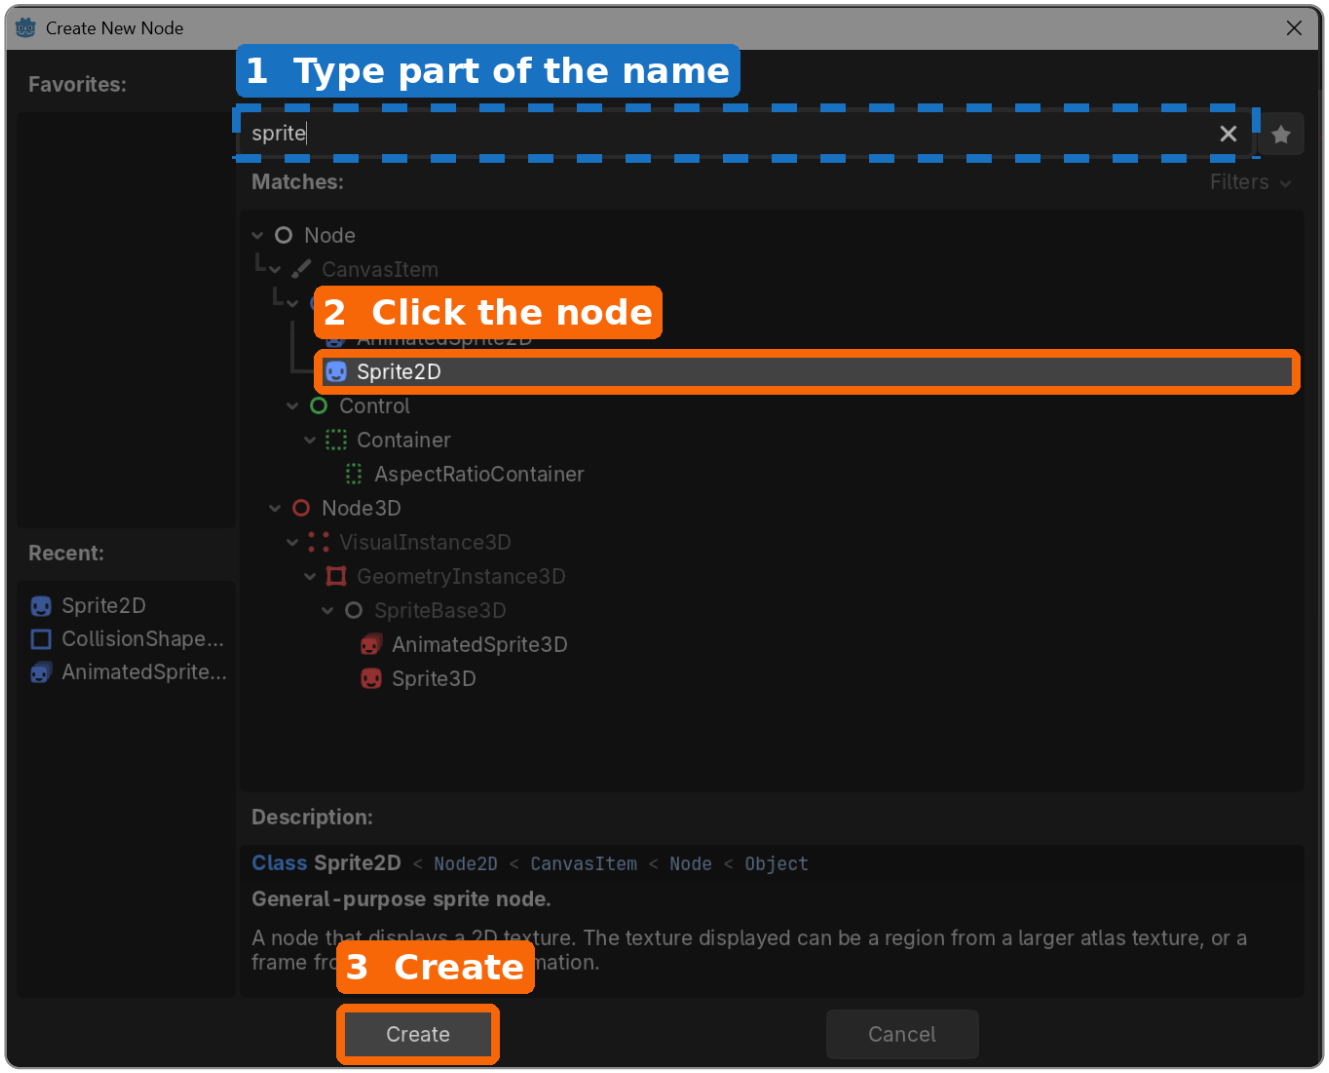

Godot › Create New Node

Type part of the node's name, for example sprite.

Click the node you want.

Click **Create**.

The Description at the bottom says what the node does.

3

Godot › Scene dock

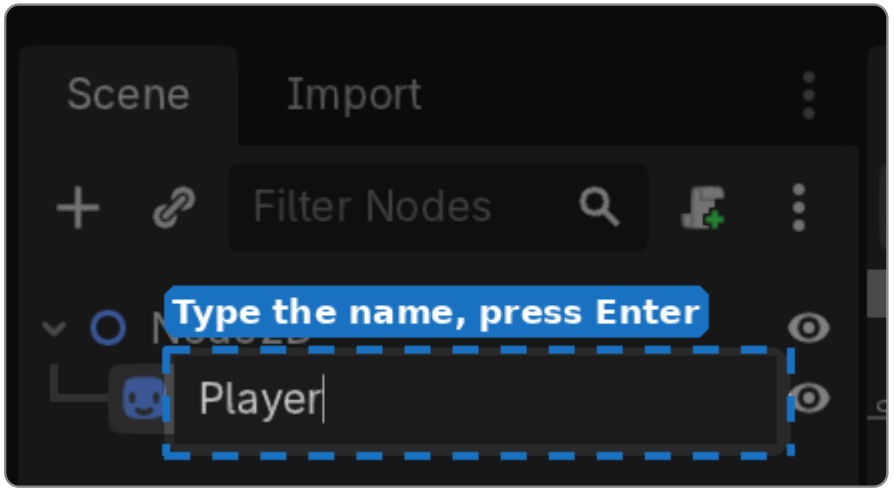

Double-click the new node.

Type a name that says what it is, like `Player` or `Coin`.

Press `Enter`.

Node names start with a capital letter. File names stay lowercase.

> **Check:** the node shows its new name, indented under the node you added it to.

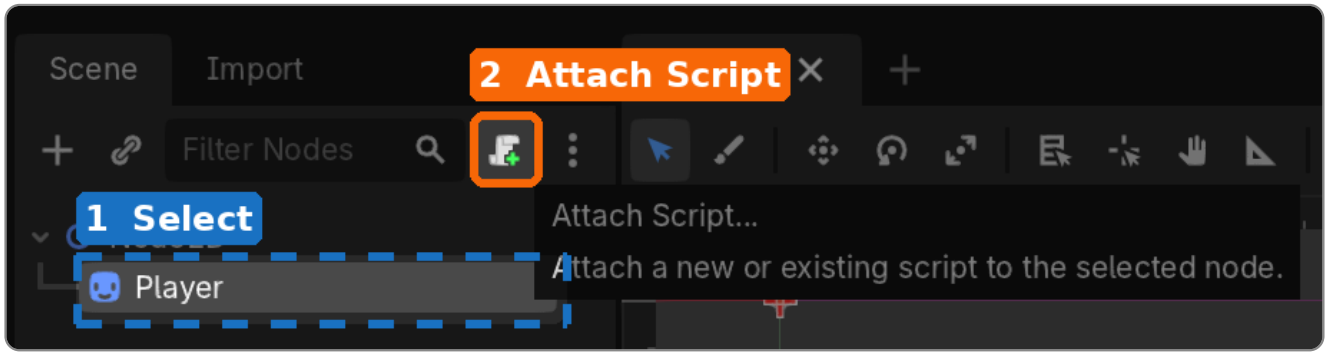

4

Godot › Scene dock

Click the node.

Click **Attach Script** (the scroll with a green +).

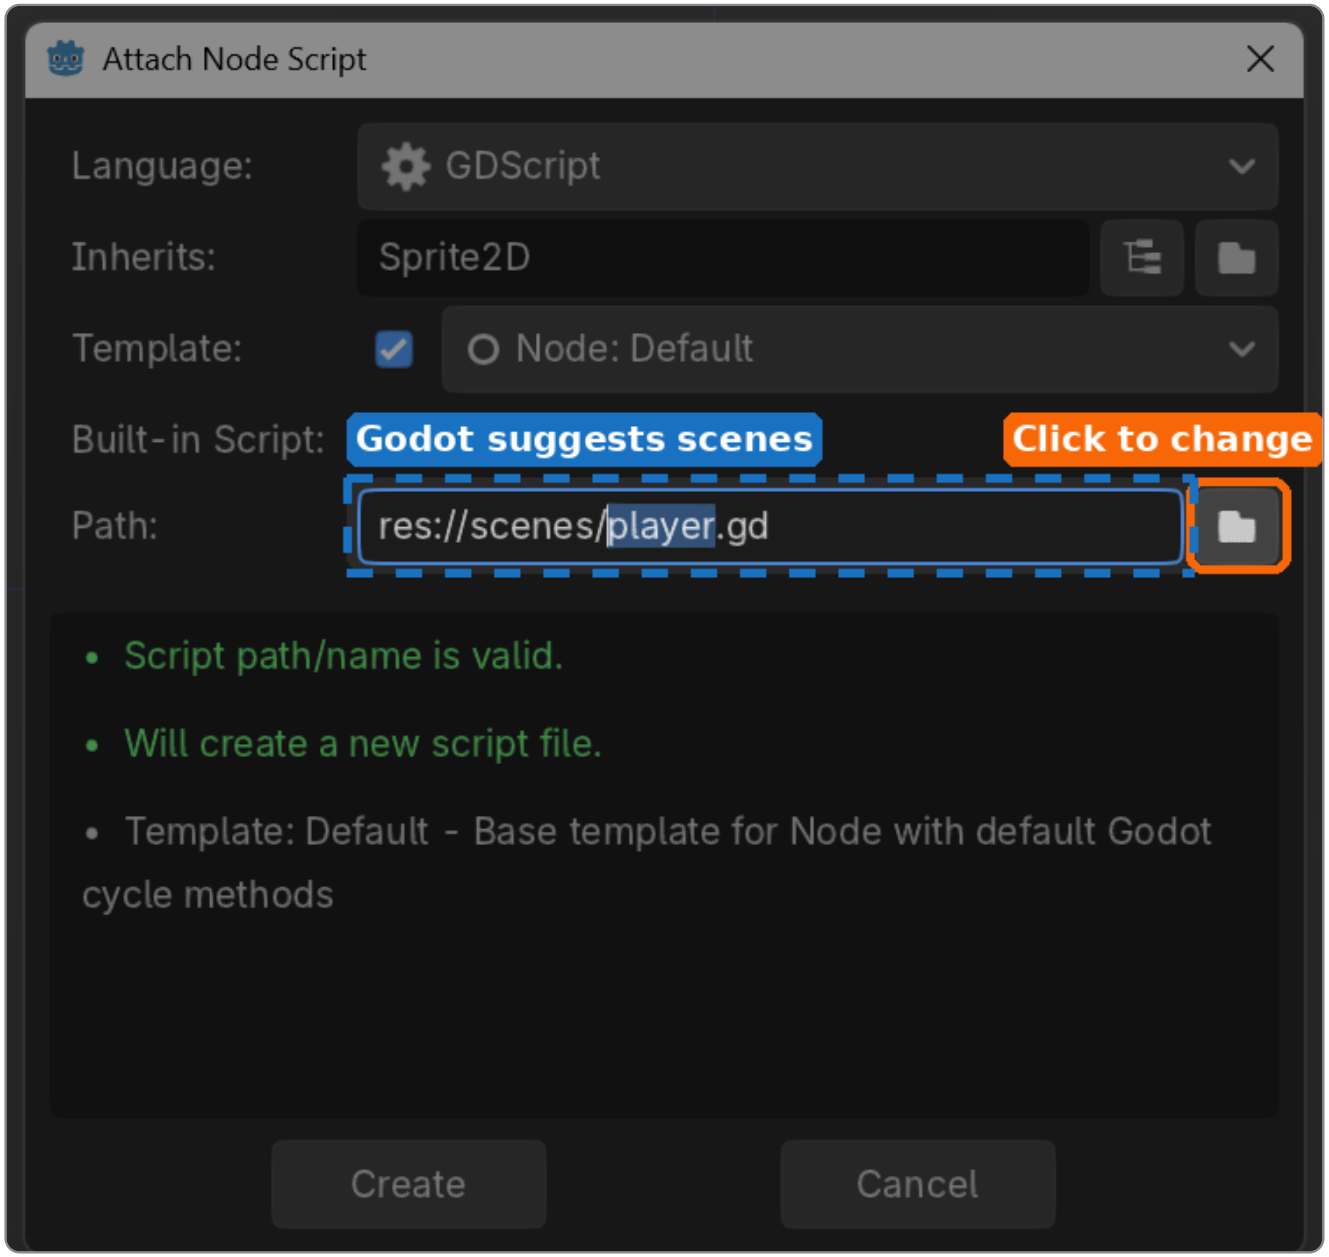

5

Godot › Attach Node Script

Click the folder button at the end of **Path**.

Godot suggests the `scenes` folder. Scripts go in `scripts` instead.

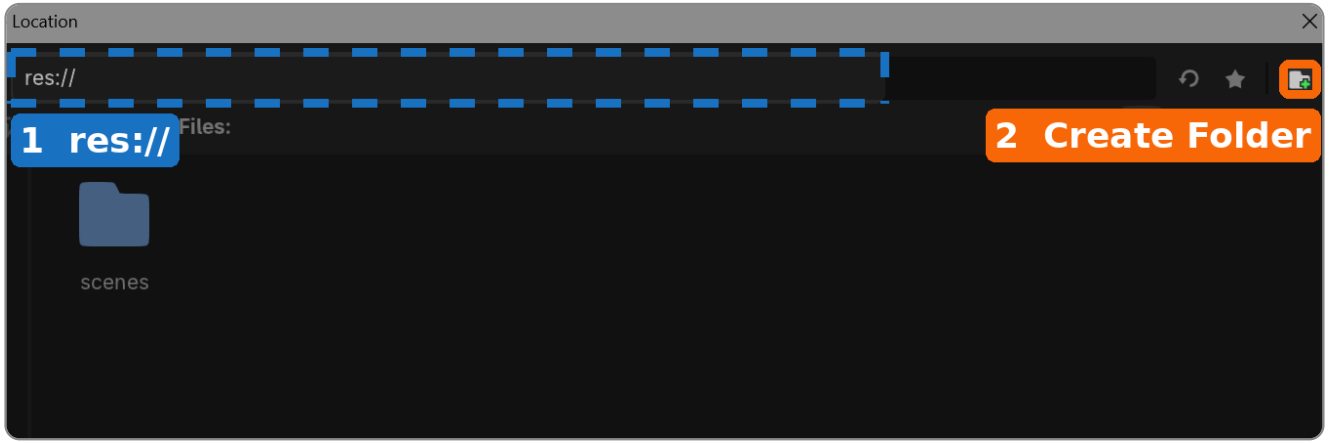

6

Godot › Open Script / Choose Location

Is there a `scripts` folder? Double-click it, and skip the next step.

No `scripts` folder? Check **Path** says `res://`, then click **Create Folder** (top right).

If something goes wrong
The Path isn't res://: click the up arrow next to **Path** until it is.

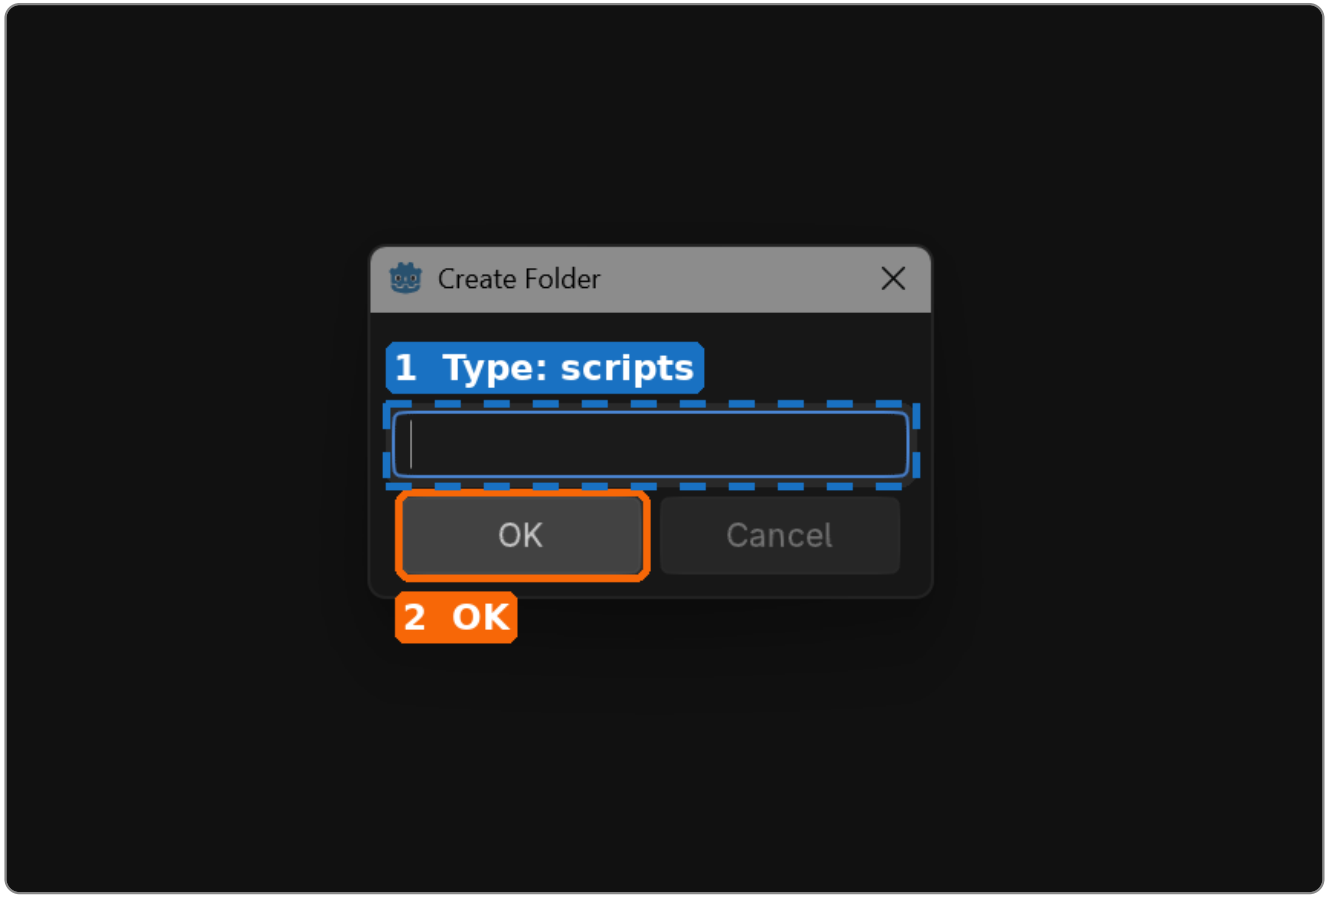

7

Godot › Create Folder

Type `scripts`, all lowercase.

Click **OK**.

Godot opens the new folder.

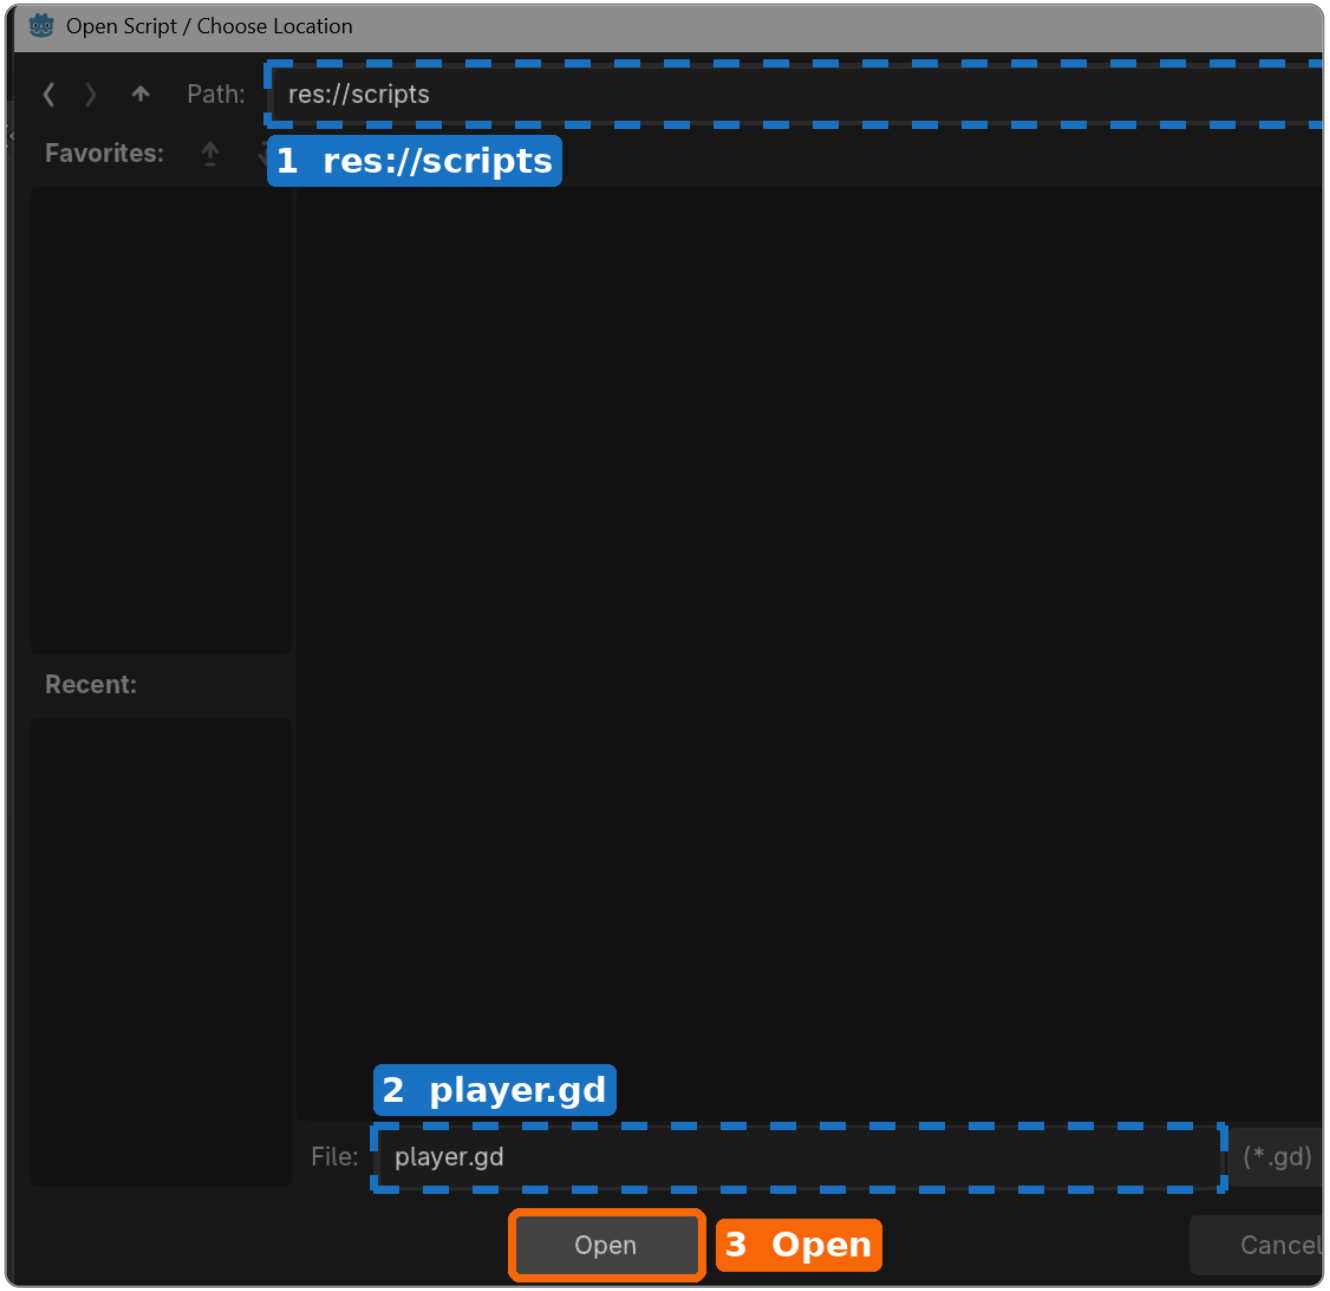

8

Godot › Open Script / Choose Location › scripts

Check **Path** says `res://scripts`.

Check **File** is the node's name in lowercase, like `player.gd`.

Click **Open**.

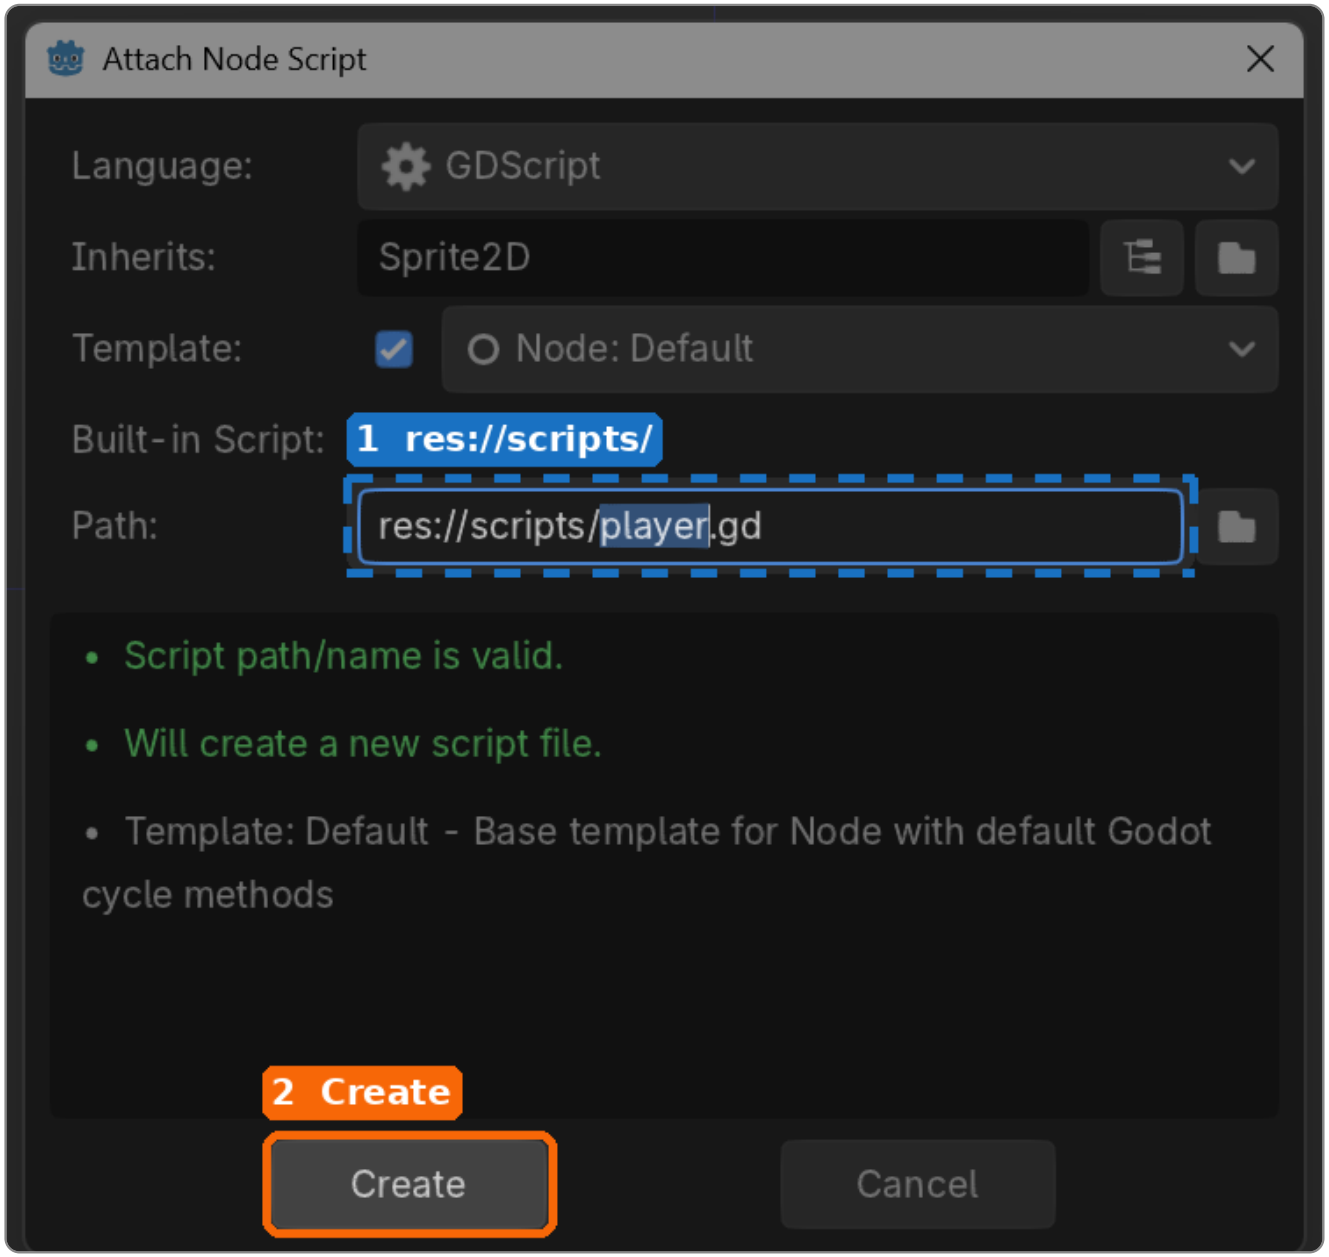

9

Godot › Attach Node Script

Check **Path** starts with `res://scripts/`.

Click **Create**.

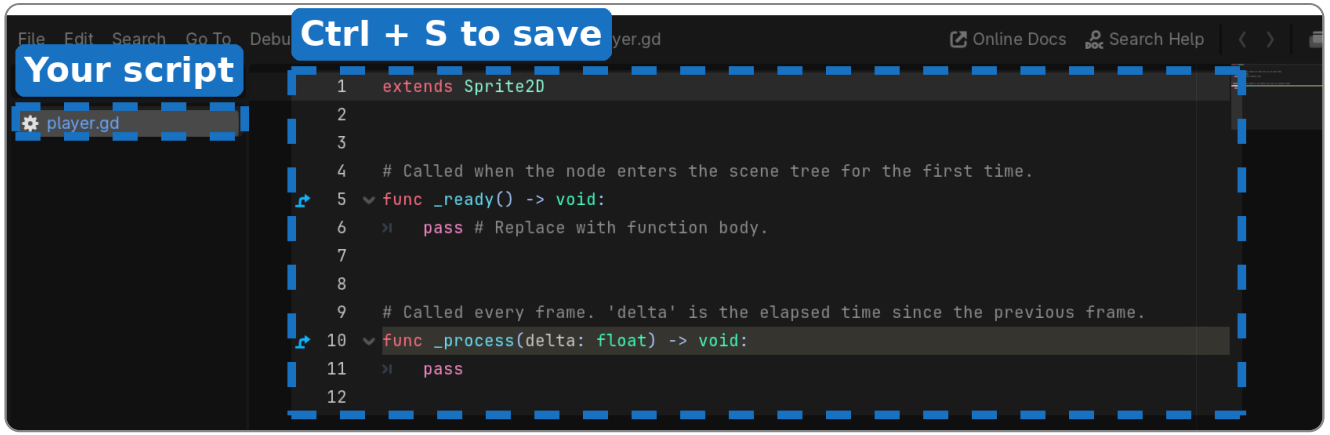

10

Godot › Script editor

Press `Ctrl` + `S` to save.

The script starts with `extends` and the node's type. The rest is starting code you can change.

> **Check:** the script's name is listed on the left, and a `scripts` folder is in **FileSystem**.

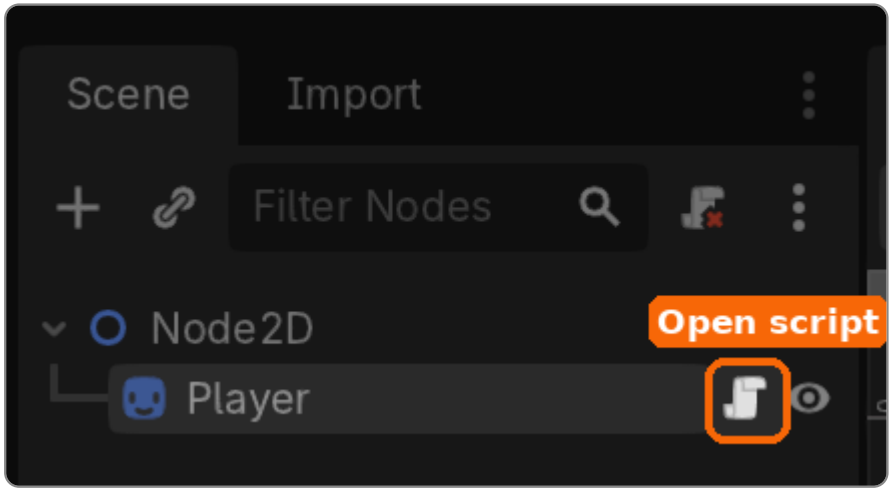

11

Godot › Scene dock

Click **2D** at the top to go back to your scene.

Click the scroll icon next to a node to open its script.

The scroll icon shows which nodes have a script.

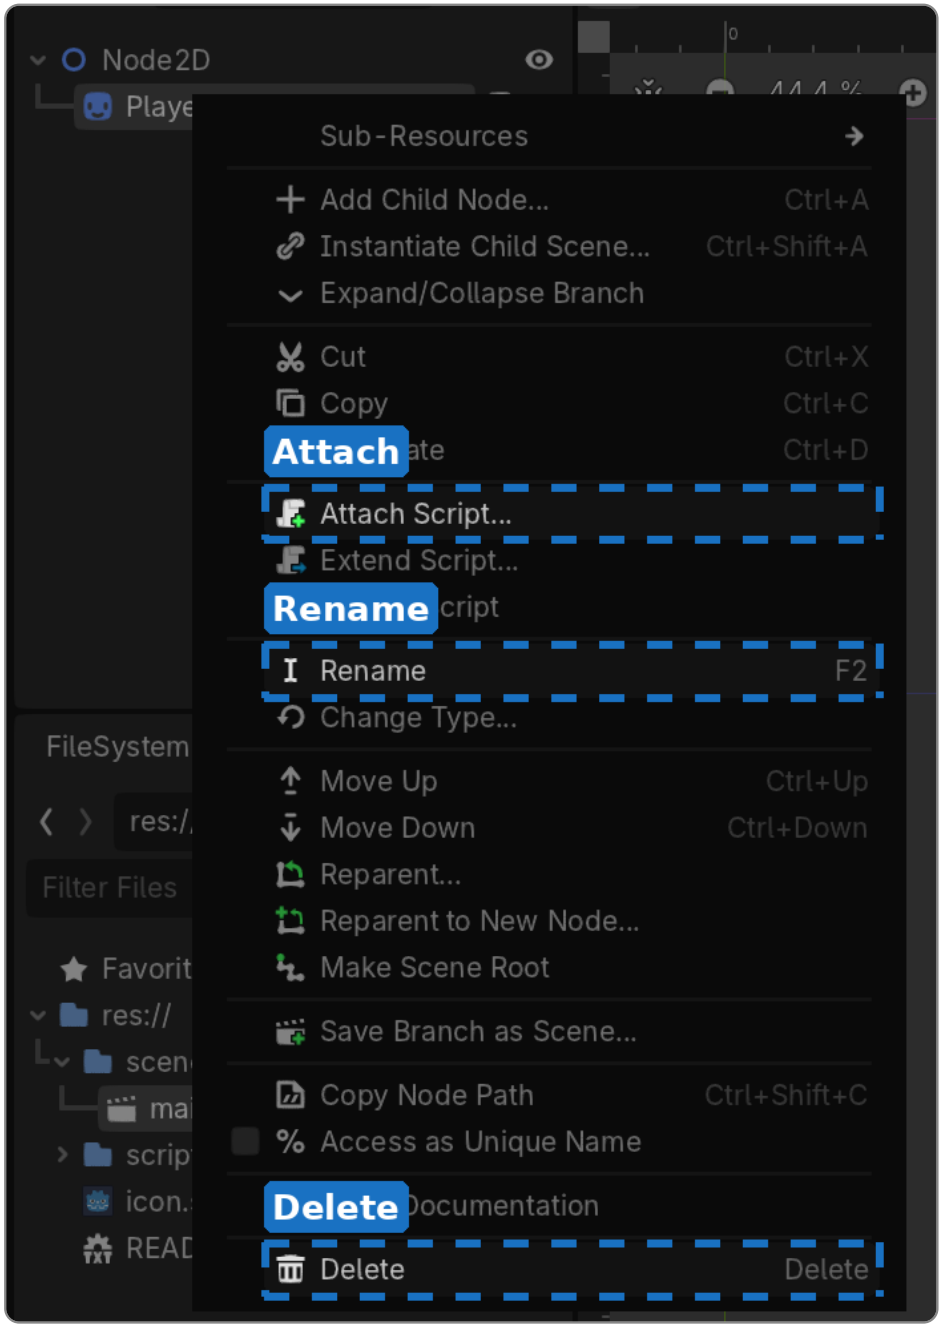

12

Godot › Scene dock › right-click

Right-click a node to **Attach Script...**, **Rename** or **Delete** it.

Shortcuts: `F2` renames, `Delete` deletes.

Folders
Scenes in `scenes`, scripts in `scripts`, images and sounds in `assets`. Make each folder the first time you need it.

Save, then commit
Press `Ctrl` + `S` in the scene and the script, then commit and push (see the guide Commit and push with GitHub Desktop).

Checkpoint

- [ ] I can add a node and rename it.
- [ ] I can attach a script and save it in `scripts`.
- [ ] I can open a node's script from the Scene dock.
