Change the main scene

Digital Technologies · School computers

You will

- choose which scene runs first when you play your game
- change it later, for example to your start menu

You need

- your Godot project open, with at least one saved scene (see the guide Commit and push with GitHub Desktop)

Before you start

- The main scene is the first thing players see.
- Already have a main scene and want to change it? Skip the first three steps.

 Click here  Look here

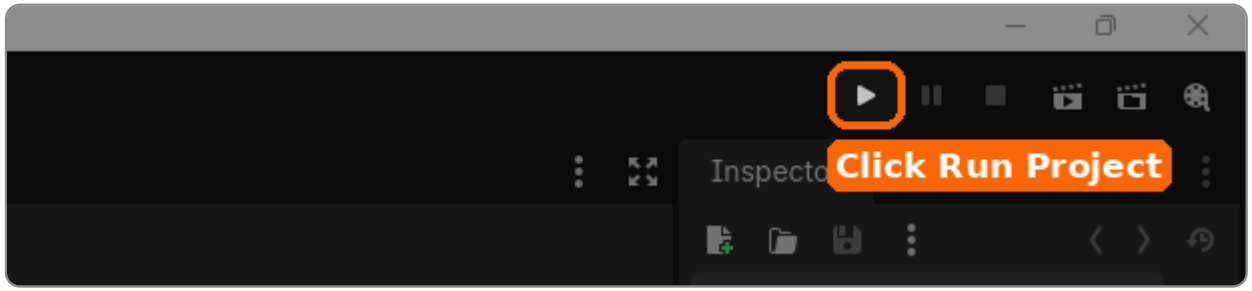

1

Godot › Editor

Open the scene you want to run first.

Click **Run Project** (the play button, top right).

Or press F5.

2

Godot › Please Confirm

Click **Select Current**.

Select Current makes the scene you have open the main scene. **Select** lets you choose a different one.

If something goes wrong
No pop-up, and a different scene runs: your project already has a main scene. Change it in the next steps.

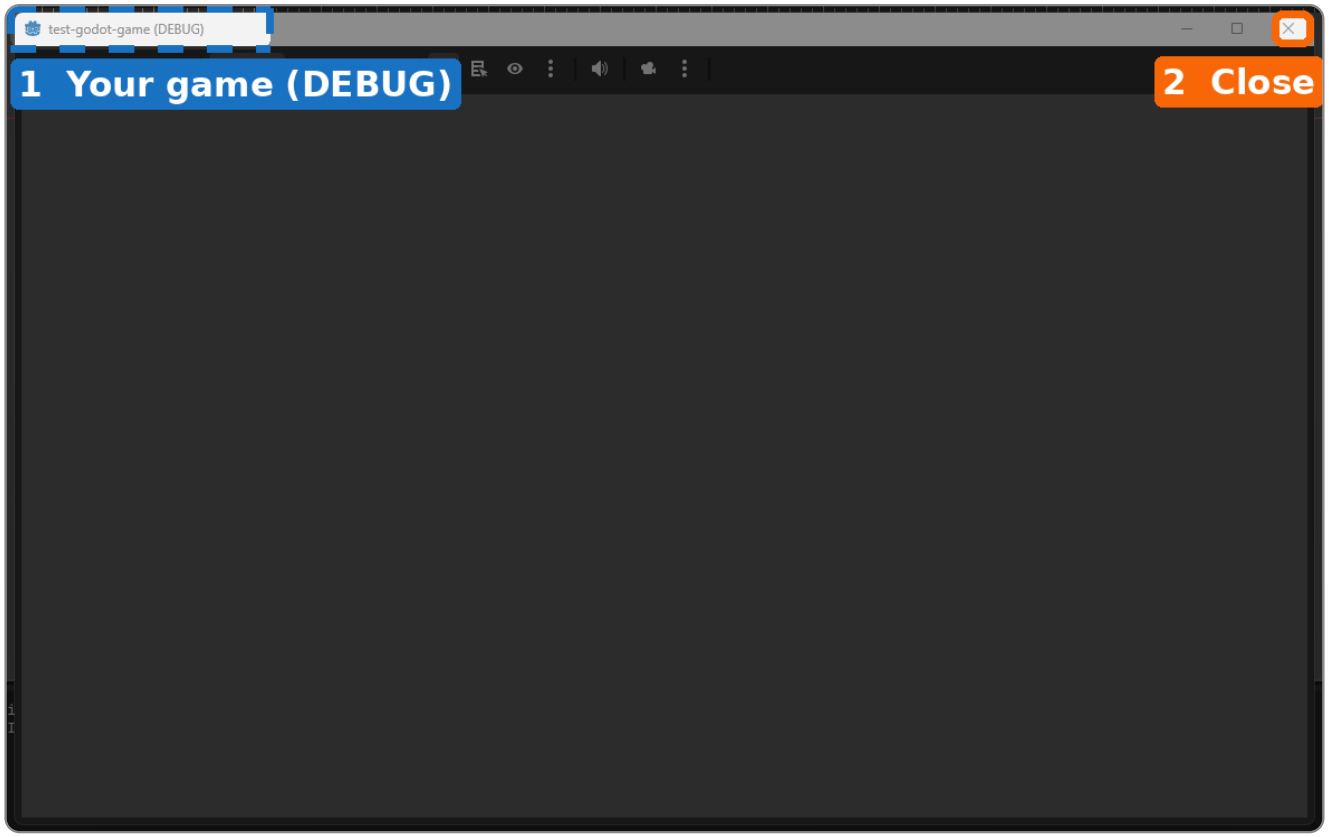

3

Godot › Your game

Check your game opens in its own window.

Close the window when you're done.

Your scene is empty for now, so the window is grey.

> **Check:** the window's title is your project name with `(DEBUG)`.

If something goes wrong
The game window won't close: click the stop button (top right in Godot) or press F8.

4

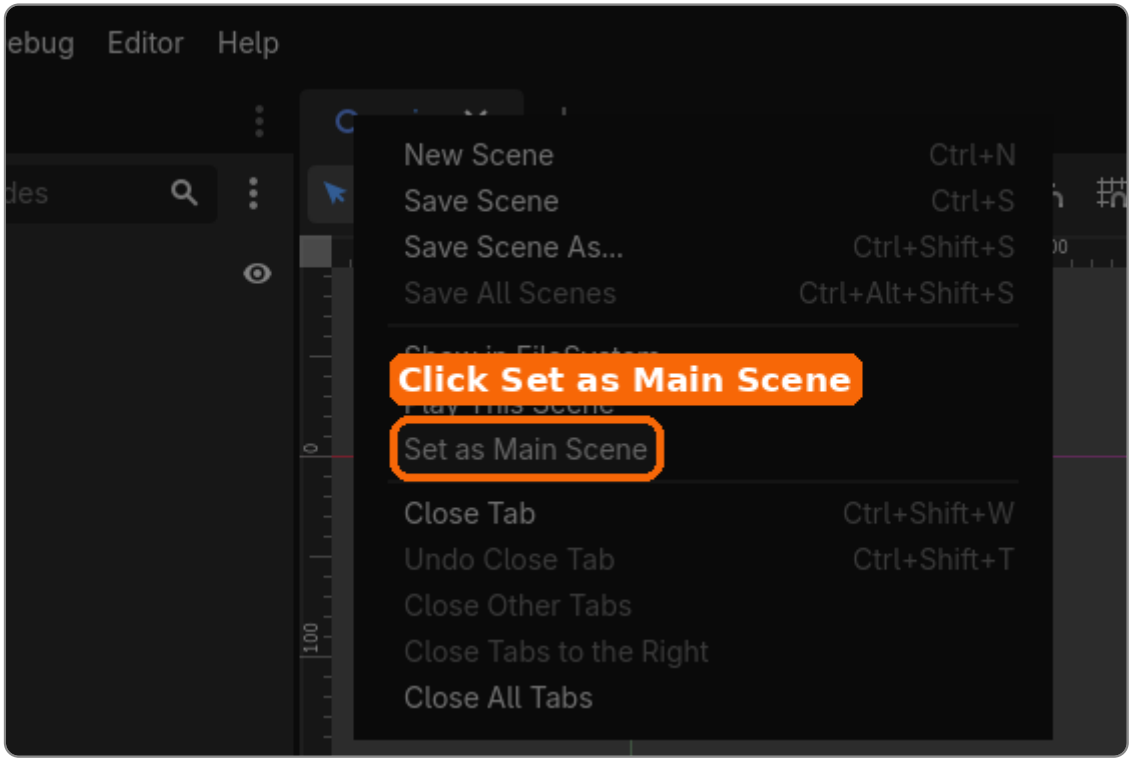

Godot › Scene tabs

Open the scene you want to run first instead.

Right-click its tab at the top.

Click **Set as Main Scene**.

It's greyed out if that scene is already the main scene.

5

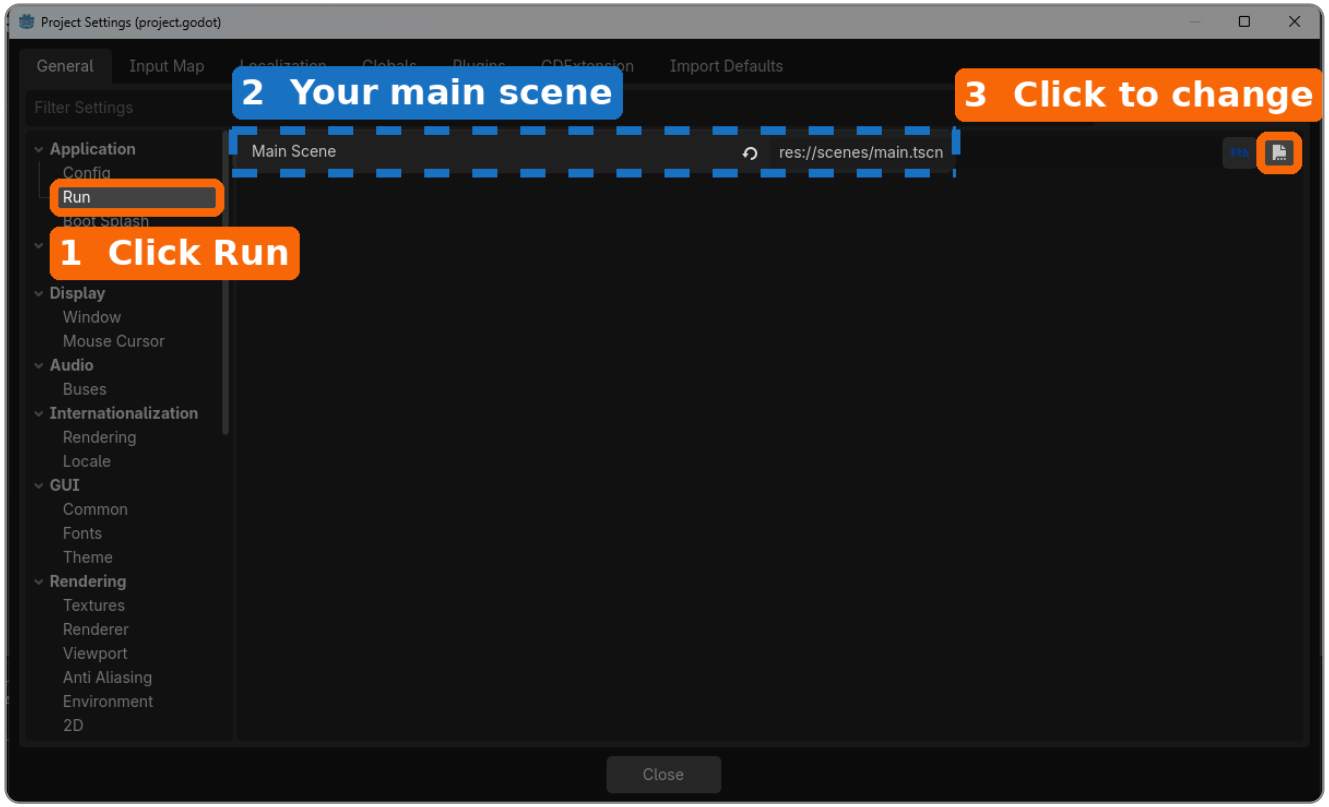

Godot › Project Settings › Run

Click **Project** › **Project Settings...**

Under **Application**, click **Run**.

Check **Main Scene** shows the scene you chose.

To choose a different one here, click the file button at the end of the **Main Scene** line.

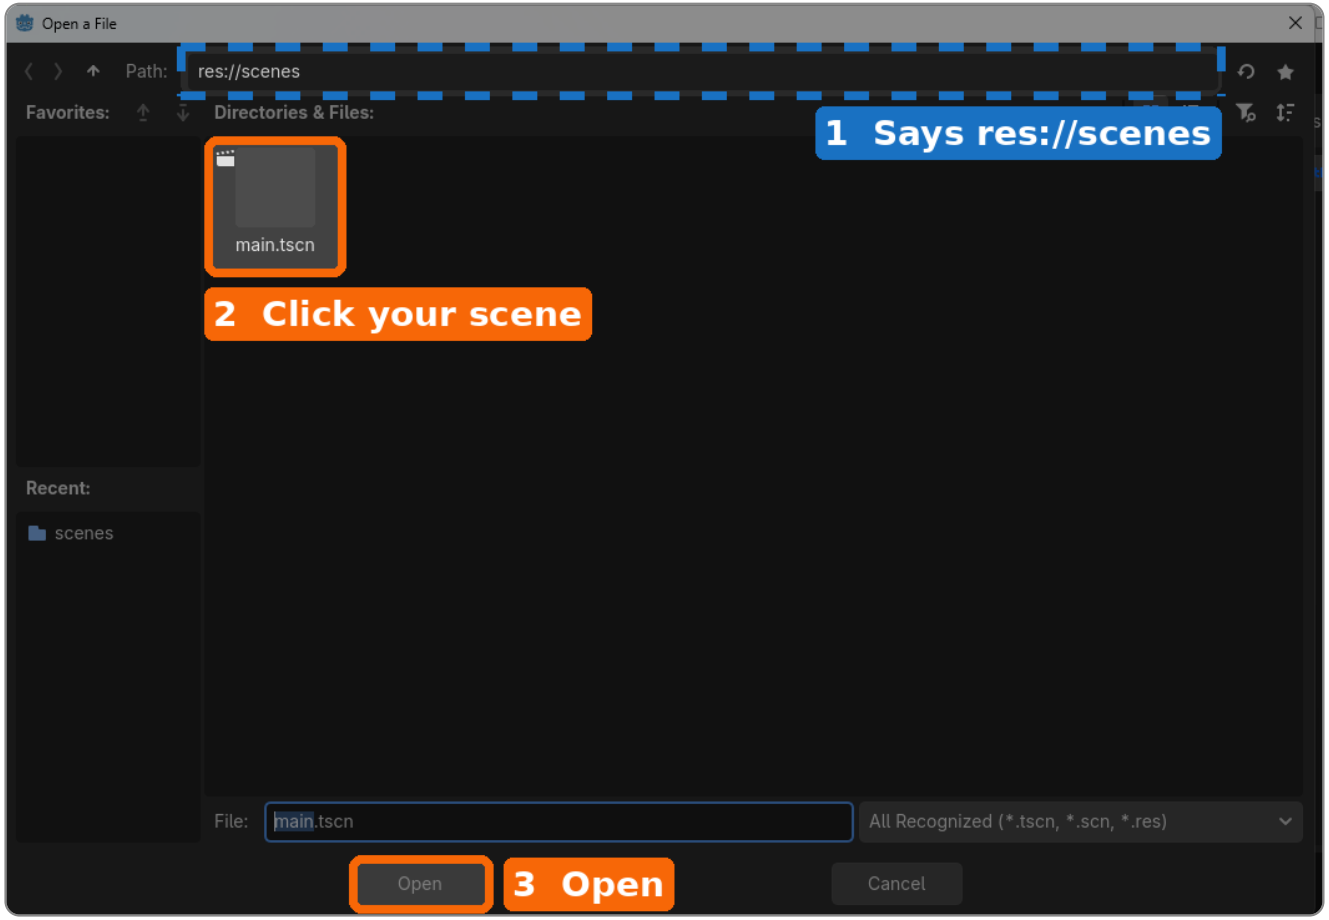

6

Godot › Open a File

Check **Path** says `res://scenes`.

Click the scene you want.

Click **Open**, then **Close**.

When you add a start menu

Make the start menu the main scene, so players see it first. Your start button then changes to the game scene.

Then commit and push

Changing the main scene changes project.godot. Commit and push it with GitHub Desktop, like any other change (see the guide Commit and push with GitHub Desktop).

Checkpoint

- [ ] I can run my game with Run Project.
- [ ] I know which scene is my main scene.
- [ ] I can change the main scene.
