Commit and push in VS Code

Digital Technologies · School and personal computers

You will

- save a version of your work with a message (commit)
- send it to GitHub (push), so it's backed up and your kaiako can see it

You need

- your repository open in VS Code (see the guide Create a repository and open it in VS Code)
- your Git name and email set (see the guide Set your Git name and email)

Before you start

- Do this at the end of every lesson, and whenever you finish a piece of work.

 Click here  Look here

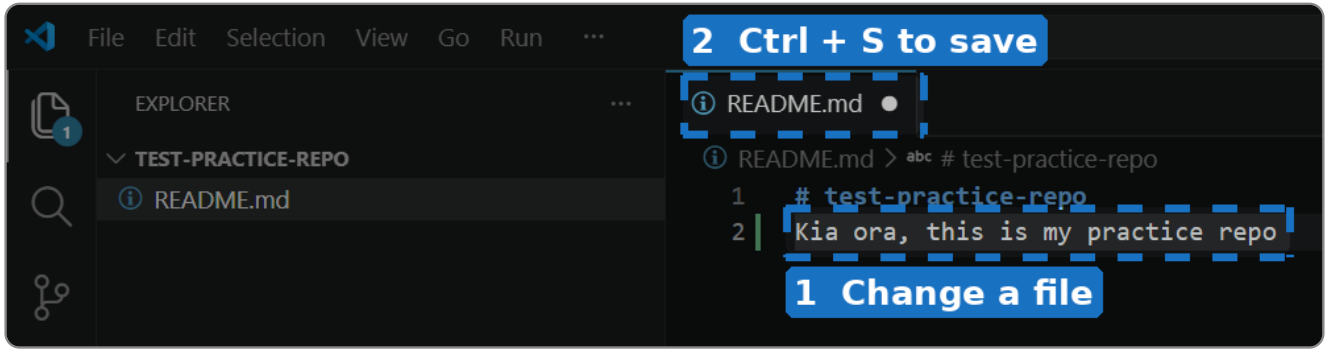

1

VS Code › your file

Make a change to a file.

Press `Ctrl` + `S` to save.

The white dot on the tab means the file isn't saved yet. It changes to an X when you save.

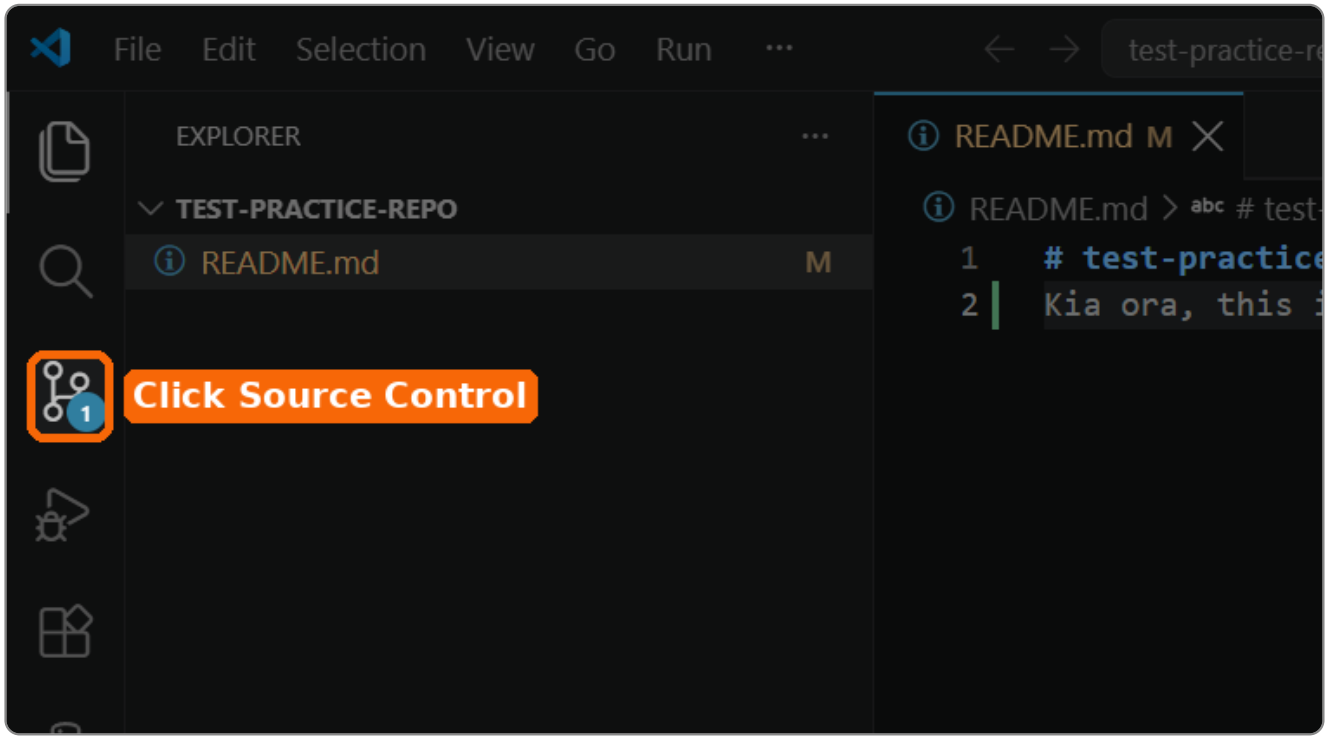

2

VS Code

Click the **Source Control** icon in the left bar.

The blue number shows how many files have changed.

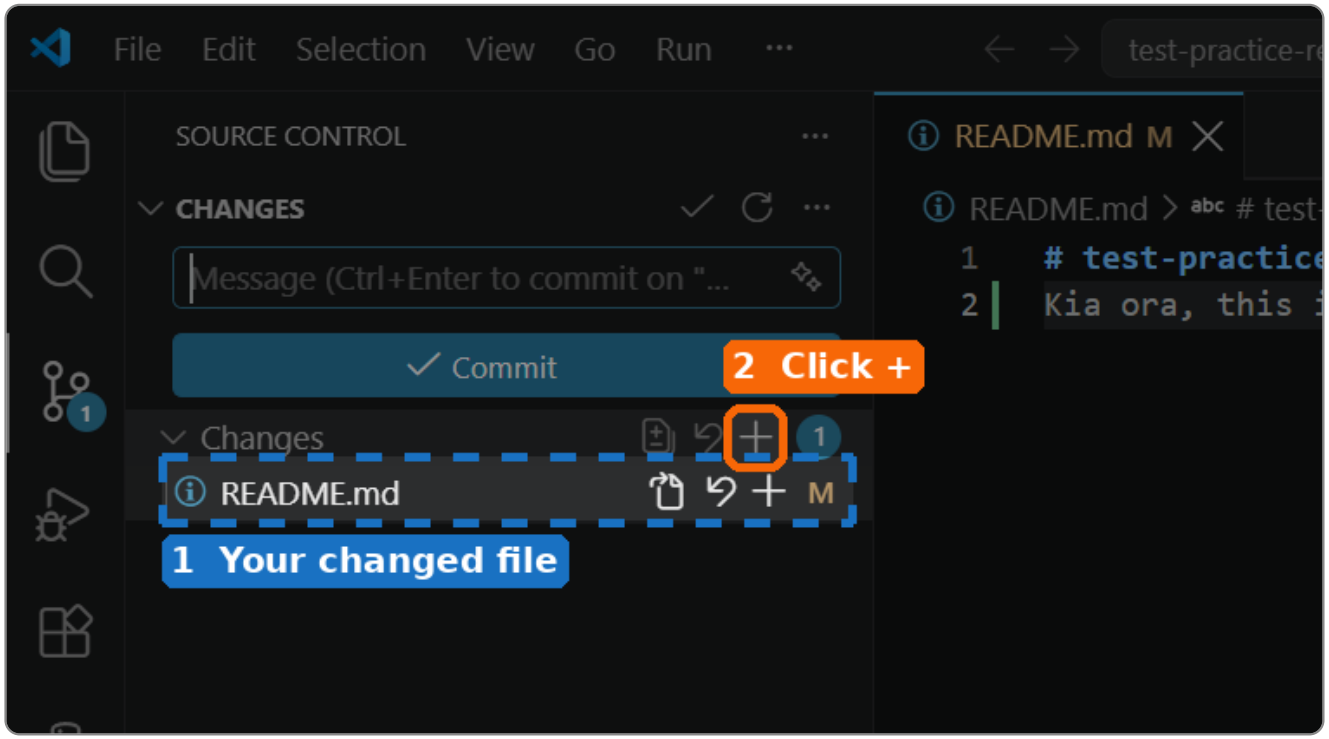

3

VS Code › Source Control

Point at **Changes**.

Click the **+** (**Stage All Changes**).

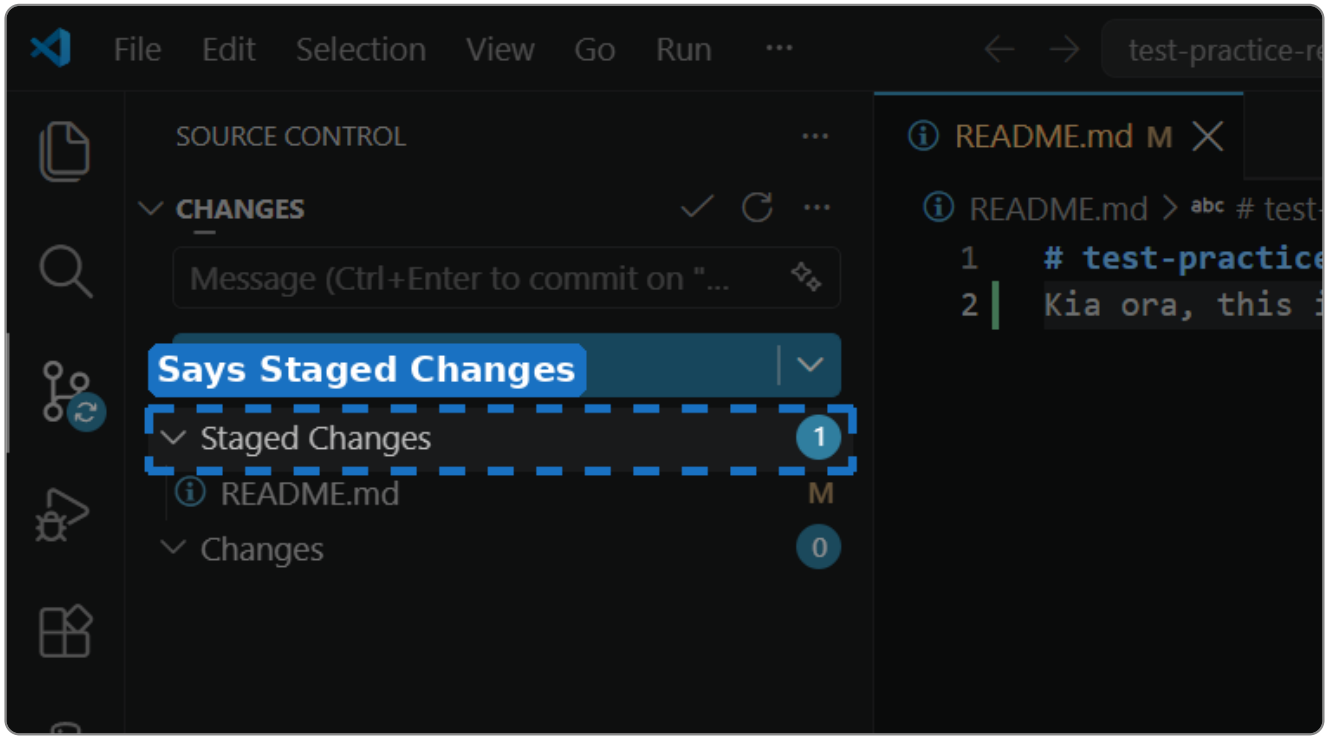

Staging chooses which changes go into your next version.

4

VS Code › Source Control

Check your files are under **Staged Changes**.

5

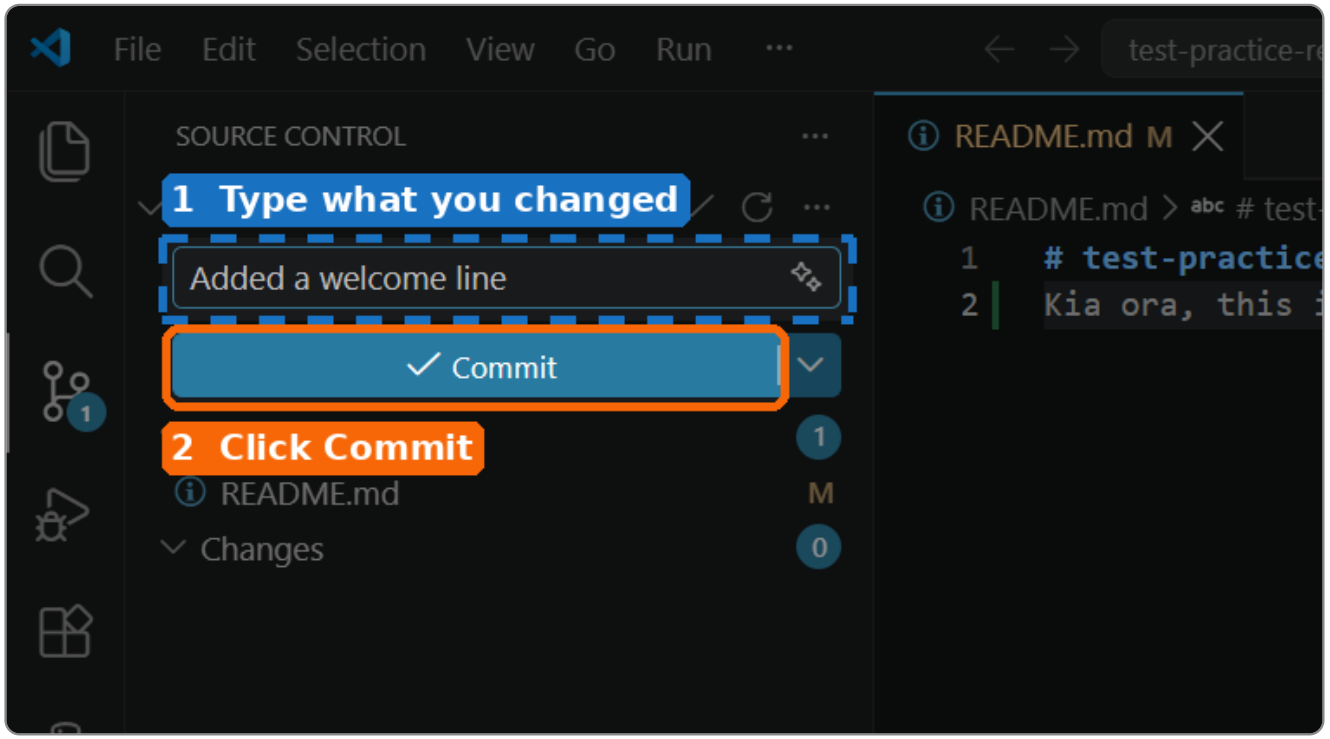

VS Code › Source Control

In the **Message** box, type what you changed.

Click **Commit**.

Write a short, clear message, for example `Added a welcome line` or `Fixed the menu colours`.

If something goes wrong
A message says there are no staged changes: click **Cancel**, then stage your changes first.

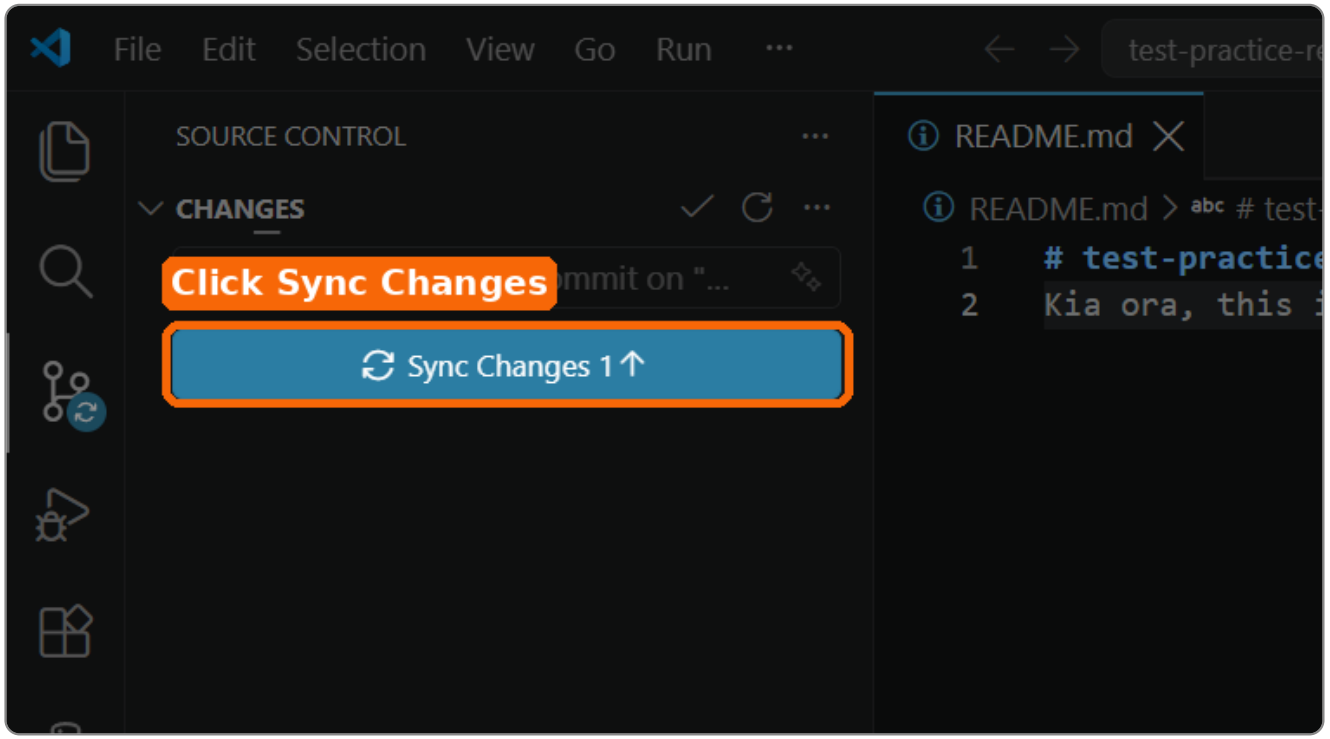

6

VS Code › Source Control

Click **Sync Changes**.

The number with the up arrow is how many commits are waiting to go to GitHub.

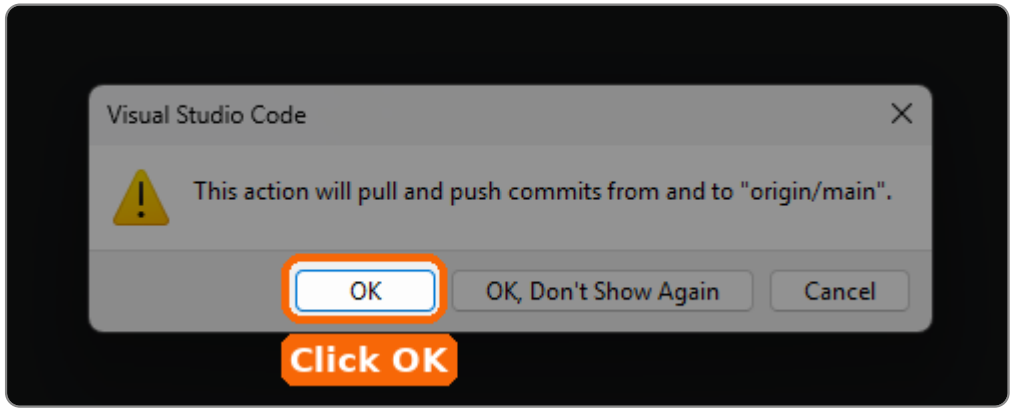

7

VS Code › Sync message

If this message appears, click **OK**.

It only appears the first time. It means VS Code will send your work to GitHub and fetch anything new.

8

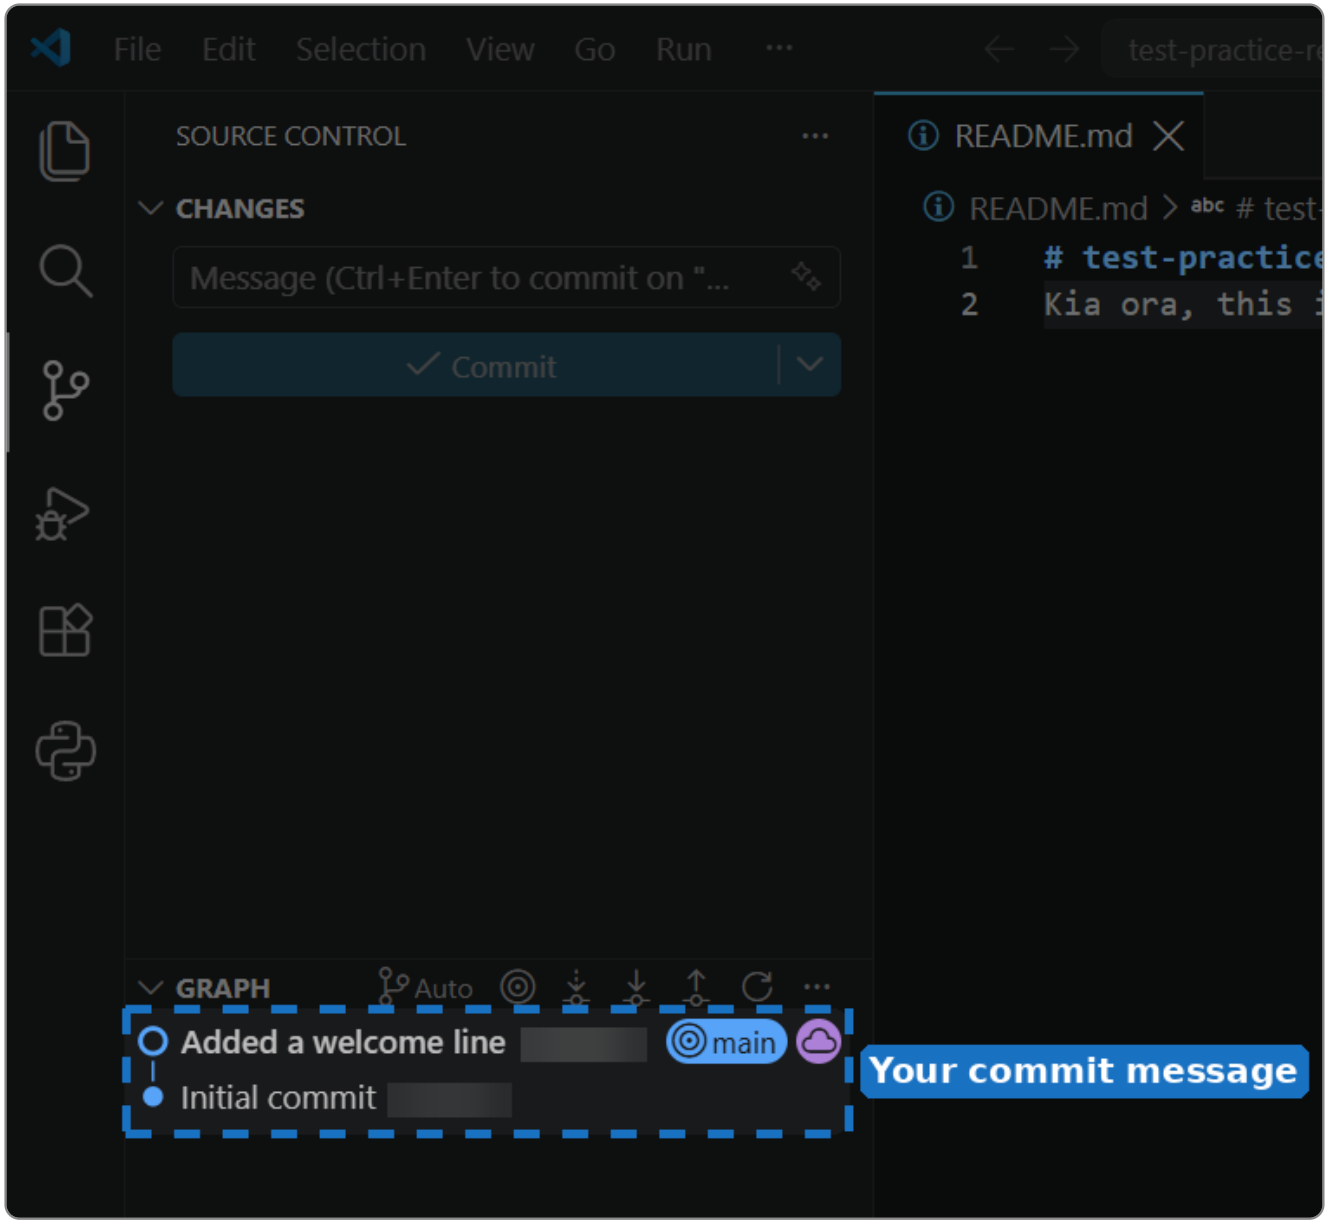

VS Code › Source Control

Wait for it to finish.

Look at **Graph**.

> **Check: Sync Changes** has gone, and your commit message is at the top of the graph.

If something goes wrong
A sign-in window appears: click **Sign in with your browser** and sign in with your school account.

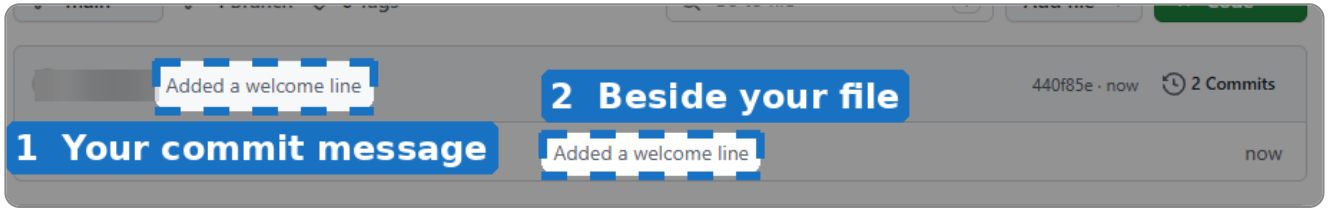

9

Chrome › your repository on GitHub

Refresh the page (F5).

Look for your commit message.

> **Check:** your message shows next to the files you changed.

Save, stage, commit, push

Ctrl + S, then **+**, then a message and **Commit**, then **Sync Changes**. Do it at the end of every lesson.

Good commit messages

Say what you changed, in a few words. Your kaiako reads these to see how your work grew.

Checkpoint

- [ ] I staged my changes and committed with a clear message.
- [ ] I pushed with **Sync Changes**.
- [ ] I checked my commit on GitHub.
