Create a repository and open it in VS Code

Digital Technologies · School computers

You will

- create a repository in `Marcellin-College-DGT` on github.com
- copy it to the computer (clone it) in `Documents` › `GitHub`
- open it in VS Code, ready to work

You need

- the guide Sign in to GitHub done
- the guide Set your Git name and email done
- the repository name your kaiako gives you

 Click here  Look here

1

GitHub › Home

Click + at the top right.

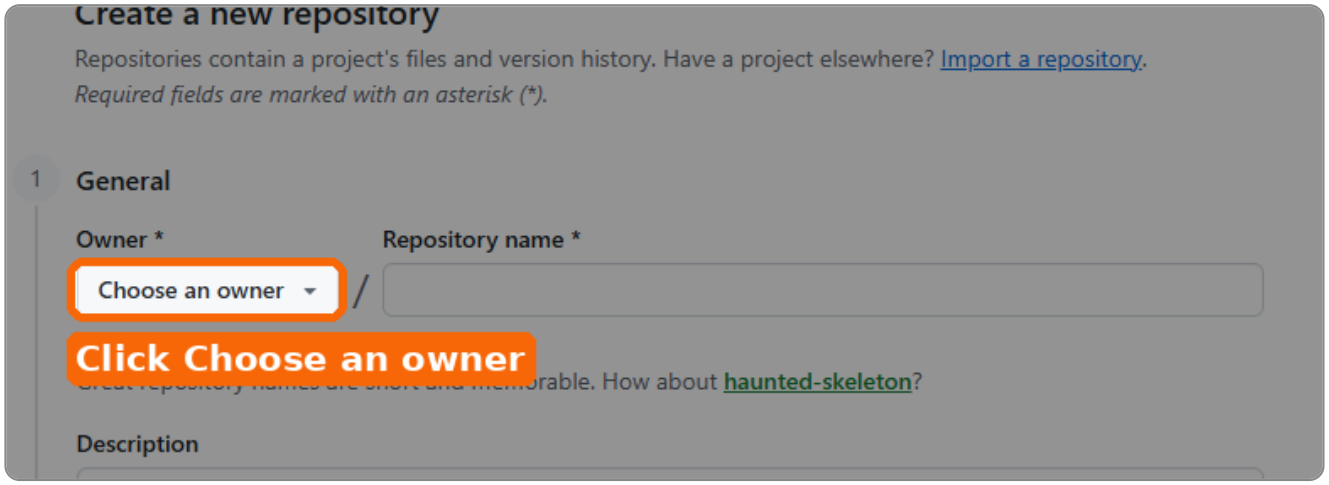

Click **New repository**.

2

GitHub › Create a new repository

Under **Owner**, click **Choose an owner**.

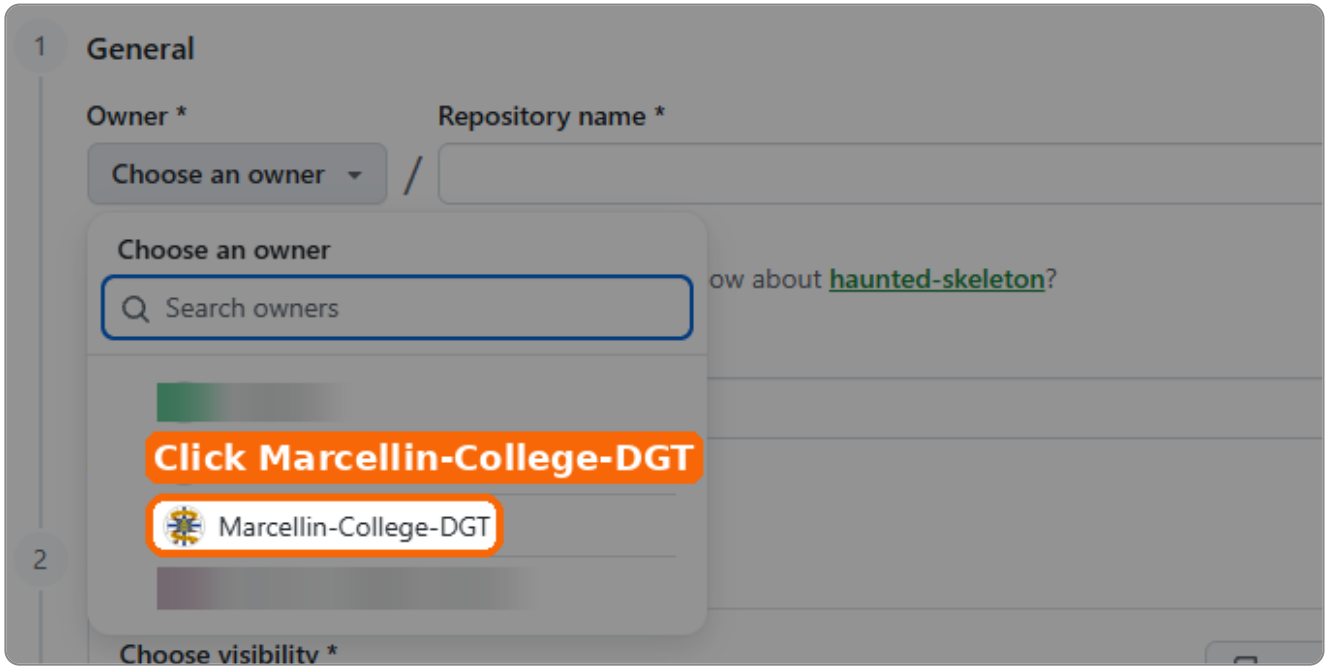

3

GitHub › Choose an owner

Click **Marcellin-College-DGT**.

Don't choose your own name. Your work must go in the school's organisation so your kaiako can see it.

If something goes wrong Marcellin-College-DGT isn't in the list: you haven't joined it yet. See the guide Sign in to GitHub.

4

GitHub › Create a new repository

Type your repository name, for example `test-practice-repo`.

Use lowercase letters and hyphens, with no spaces.

> **Check:** a green tick says the name is available.

5

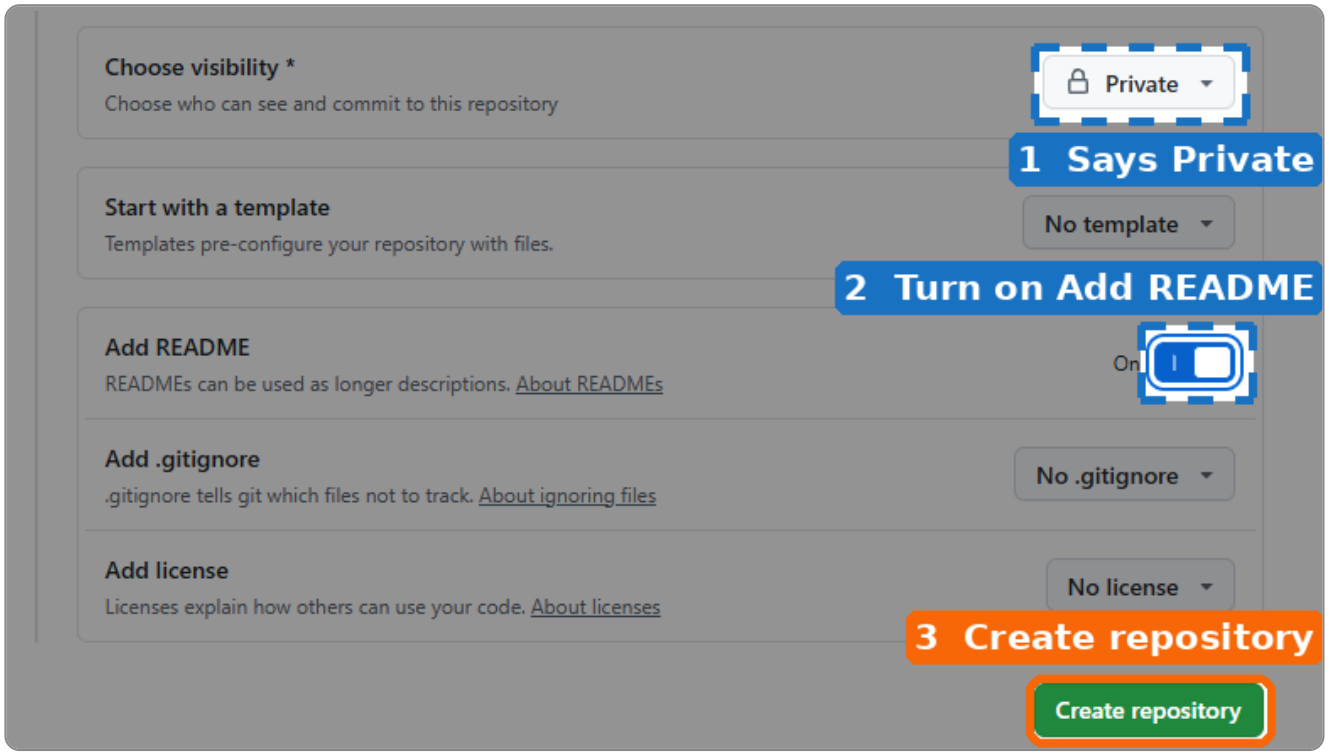

GitHub › Create a new repository

Check **Choose visibility** says **Private**.

Turn on **Add README**.

Click **Create repository**.

Private means only you and your kaiako can see it.

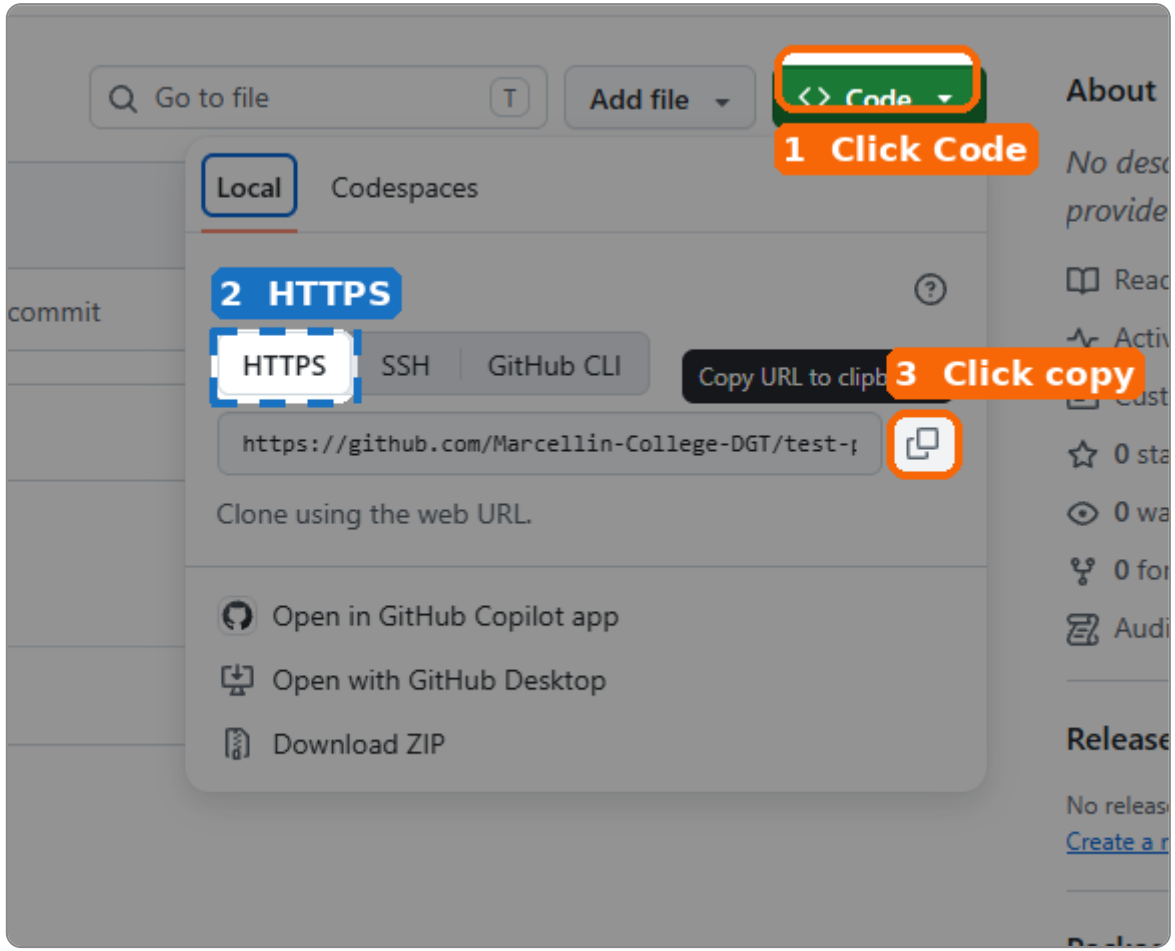

6

GitHub › your repository

Click the green **Code** button.

Check **HTTPS** is chosen.

Click the copy button beside the link.

7

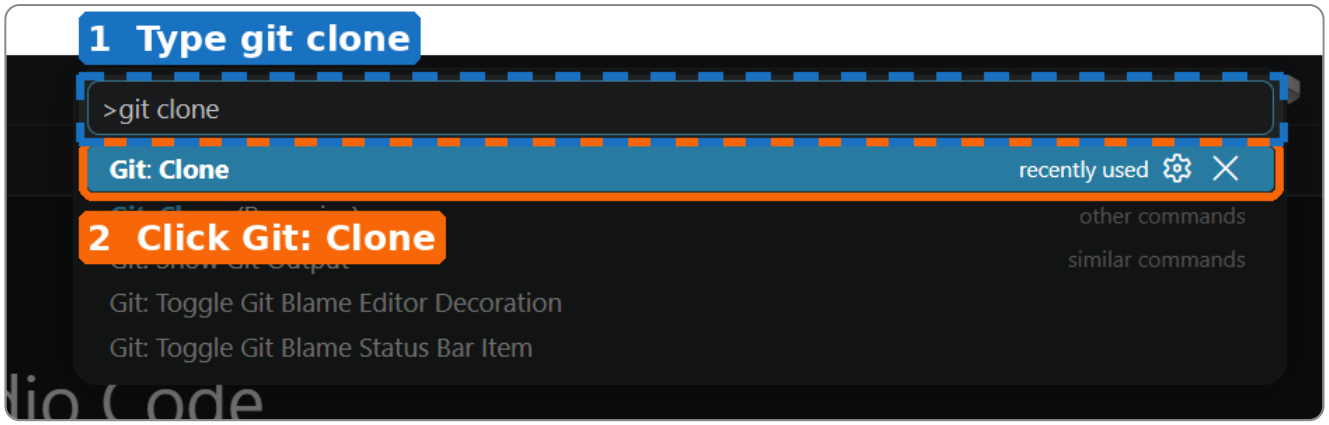

VS Code

Press `Ctrl` + `Shift` + `P`.

Type `git clone`.

Click **Git: Clone**.

If something goes wrong
The shortcut does nothing: click **View** › **Command Palette...**, or press `F1`. Or click **Clone Git Repository...** on the Welcome page.

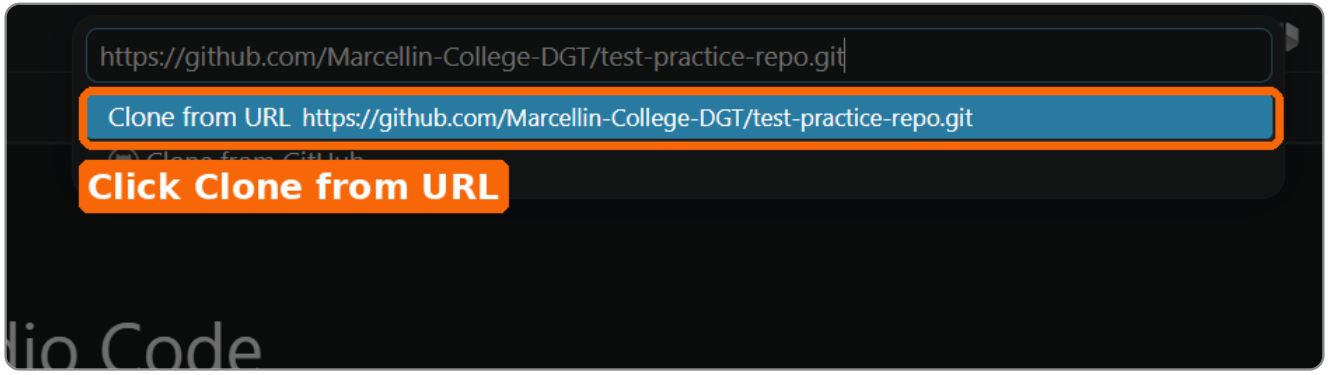

8

VS Code › Git: Clone

Press Ctrl + V to paste the link.

Click **Clone from URL**, or press Enter.

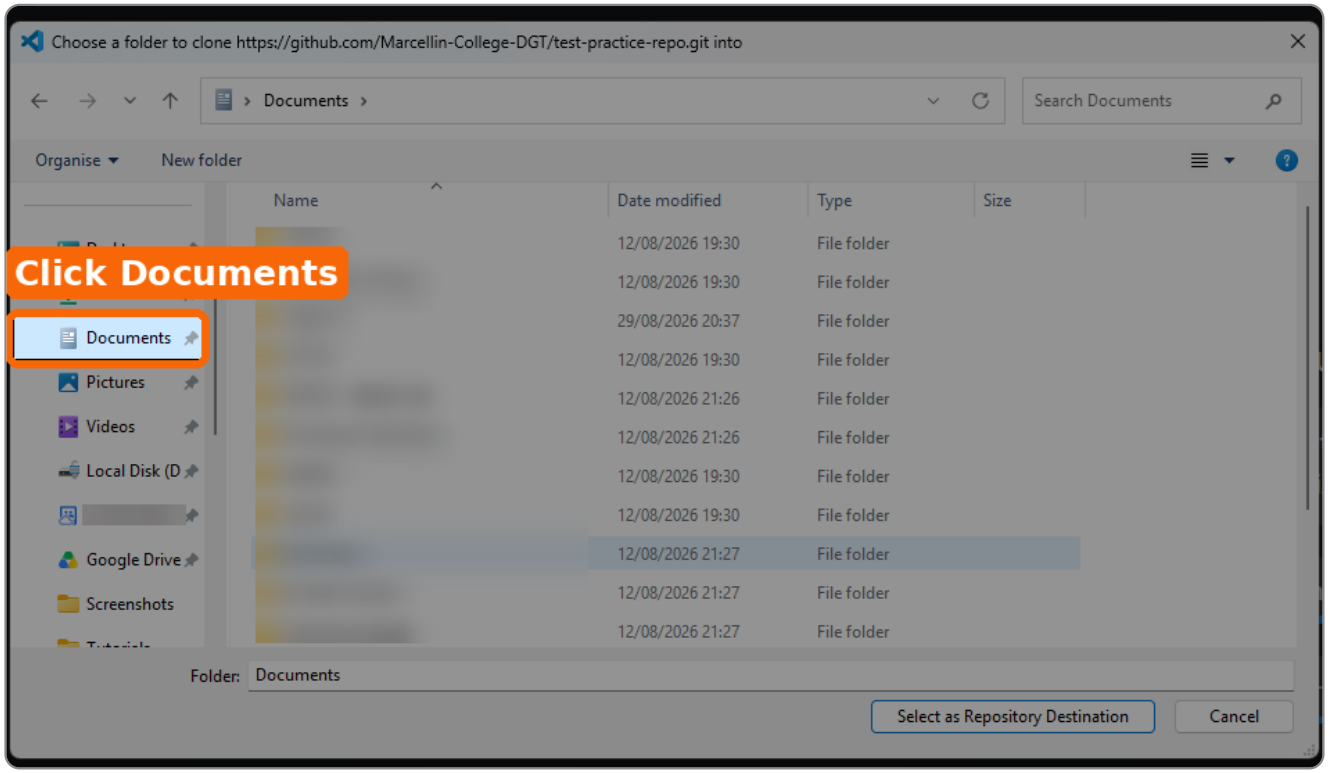

9

VS Code › Choose a folder to clone into

In the left pane, click **Documents**.

Clone into Documents, not Google Drive. Google Drive and Git can clash.

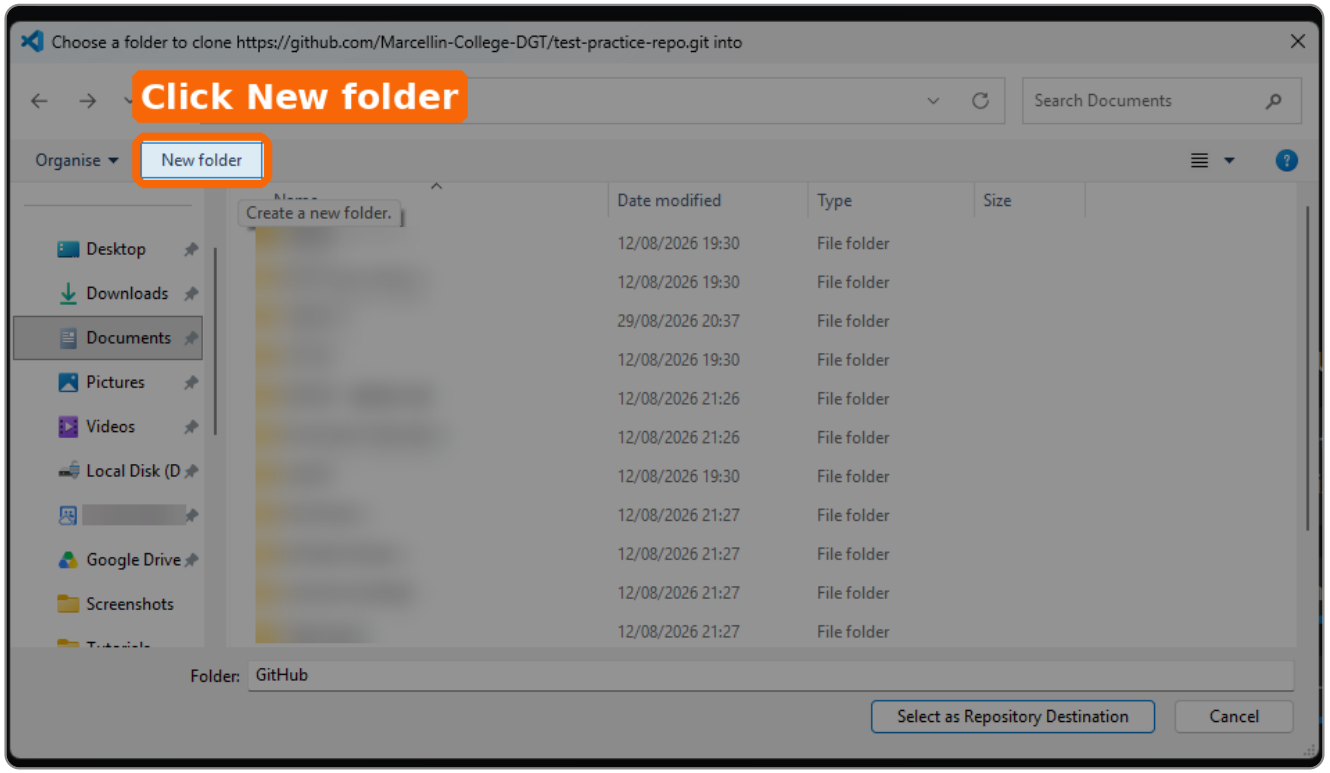

10

Choose a folder › Documents

Click **New folder**.

Already have a `GitHub` folder? Skip the next step and double-click it.

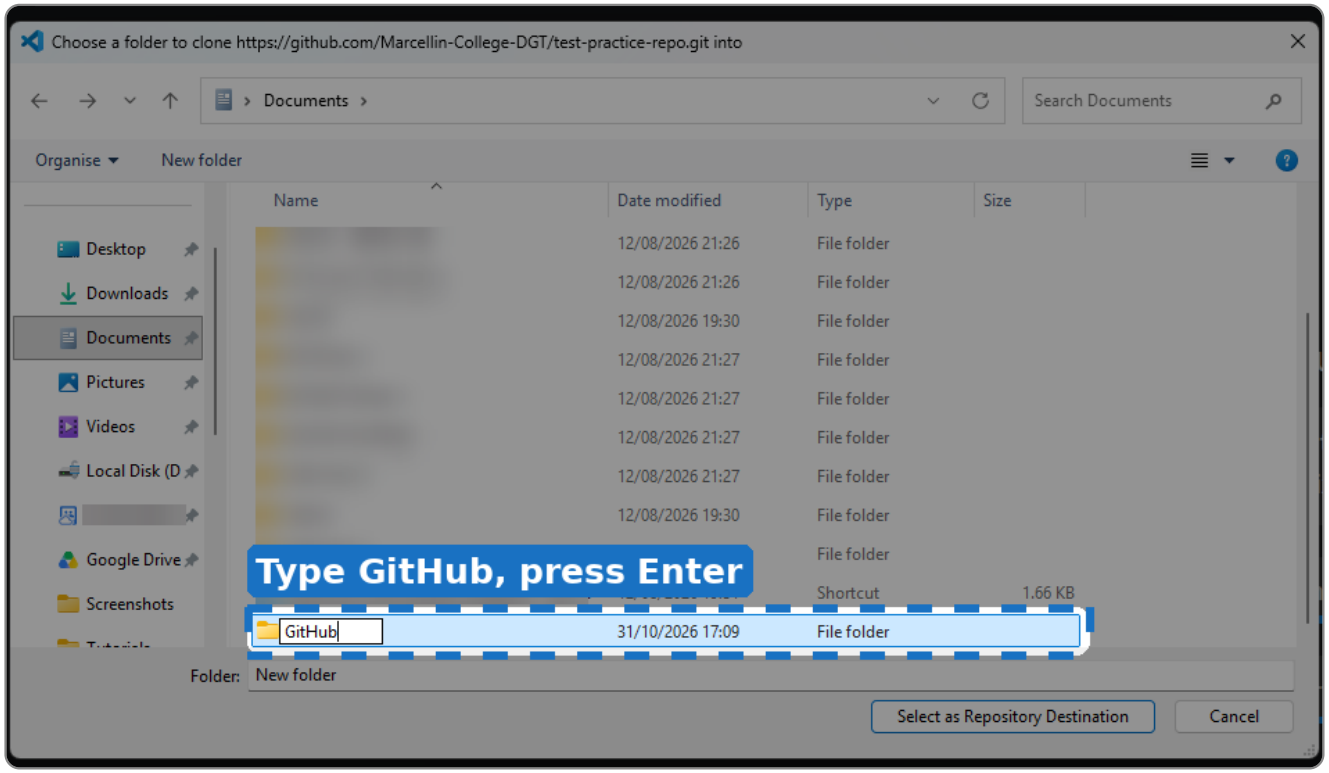

11

Choose a folder › Documents

Type `GitHub`.

Press `Enter`.

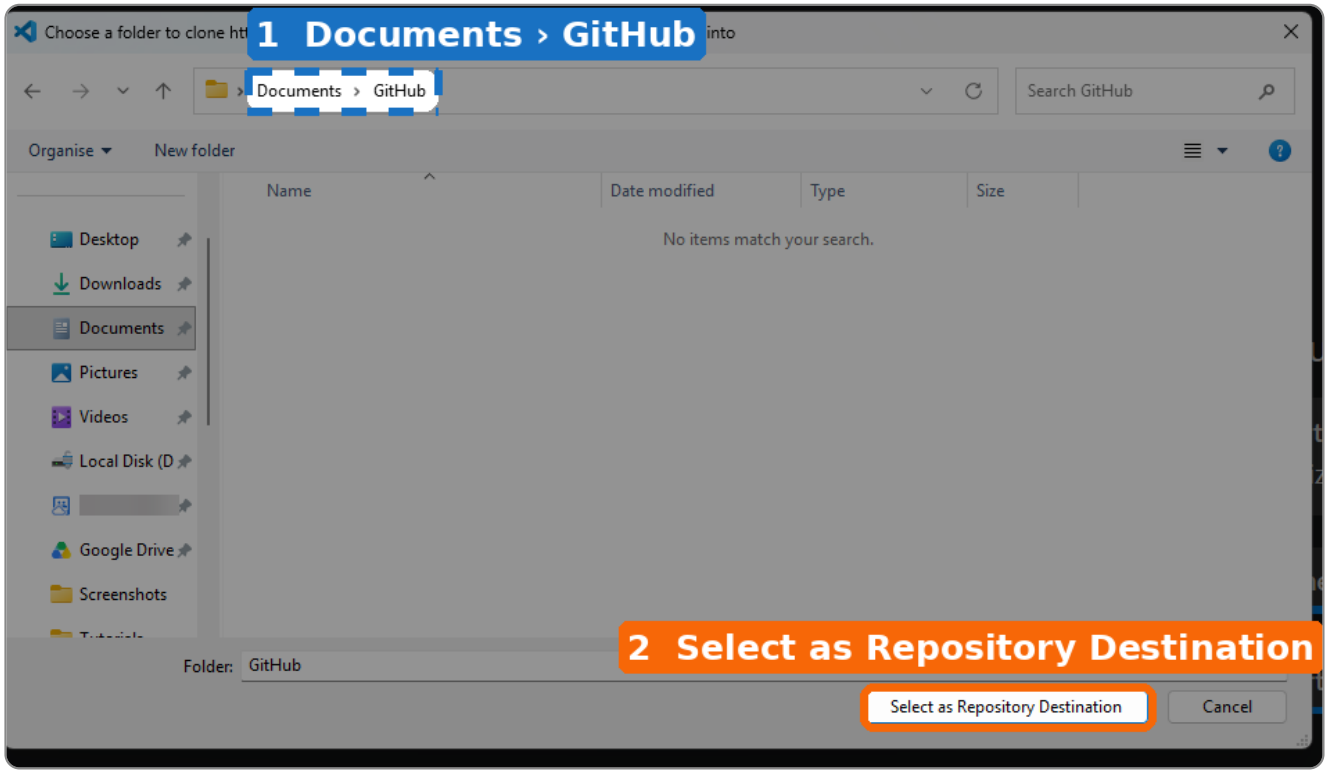

12

Choose a folder › Documents › GitHub

Double-click `GitHub` to open it.

Click **Select as Repository Destination**.

> **Check:** the path at the top says `Documents` › `GitHub`.

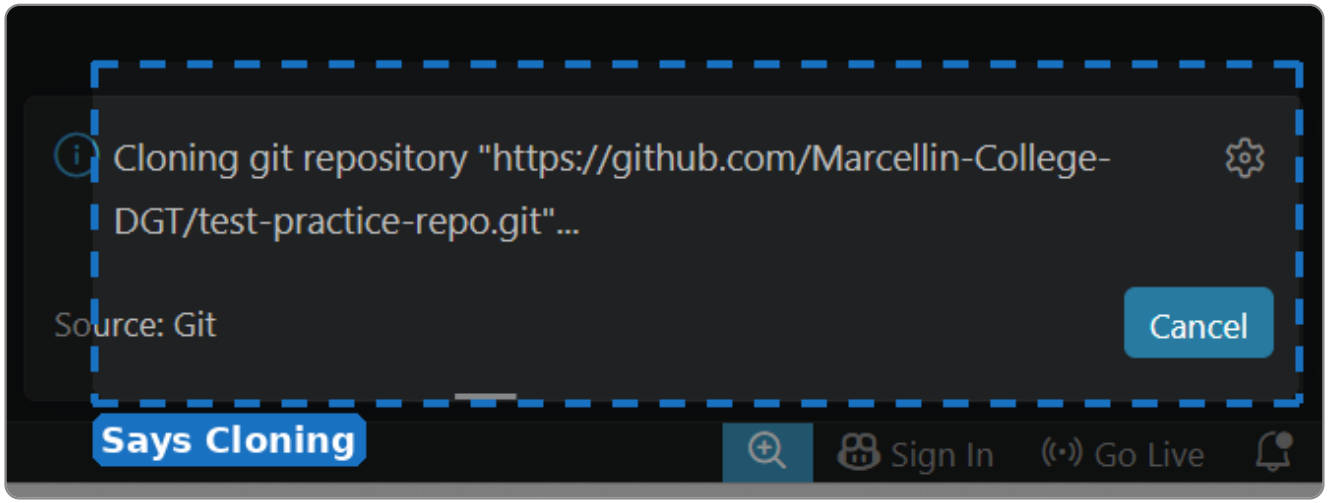

13

VS Code

Wait while VS Code clones your repository.

> **Check:** a message at the bottom right says it's cloning.

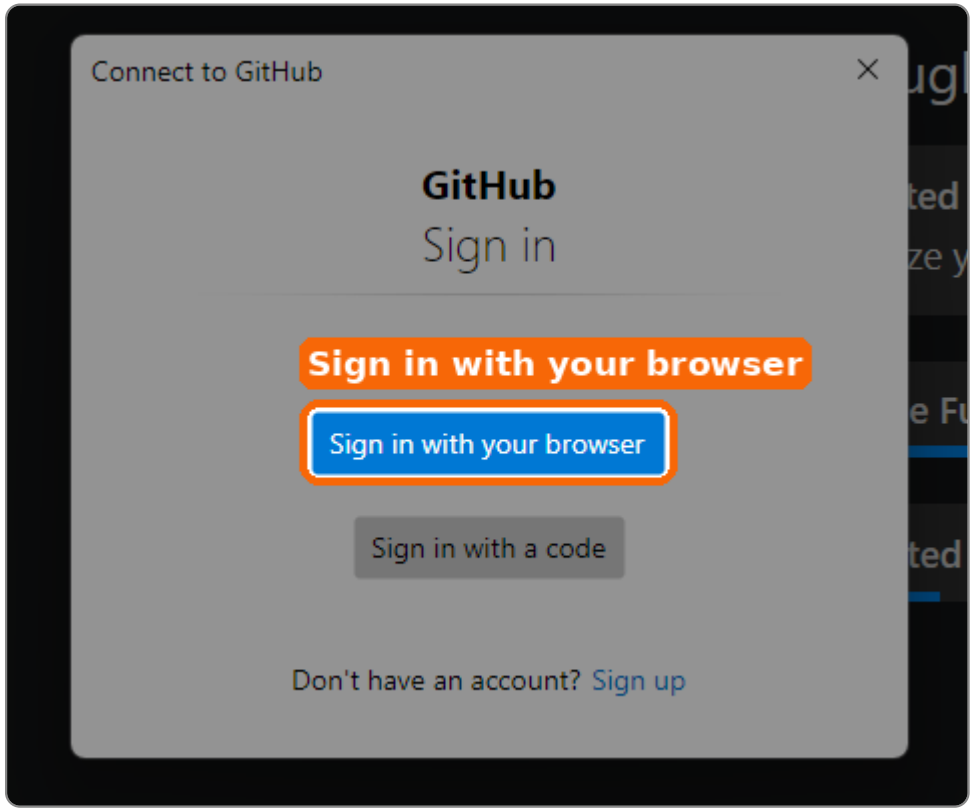

14

VS Code › Connect to GitHub

First time only: click **Sign in with your browser**.

Sign in with your school account in Chrome, then go back to VS Code.

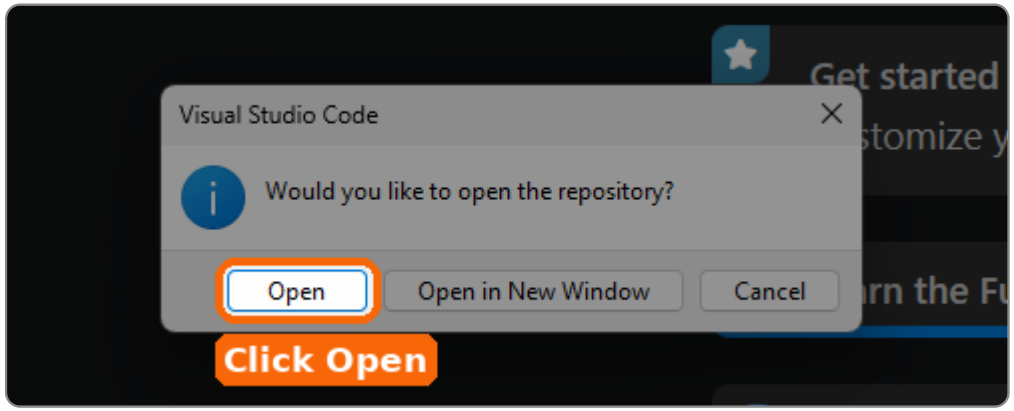

This window only appears the first time you clone or push on a computer.

15

VS Code

When it asks "Would you like to open the repository?", click **Open**.

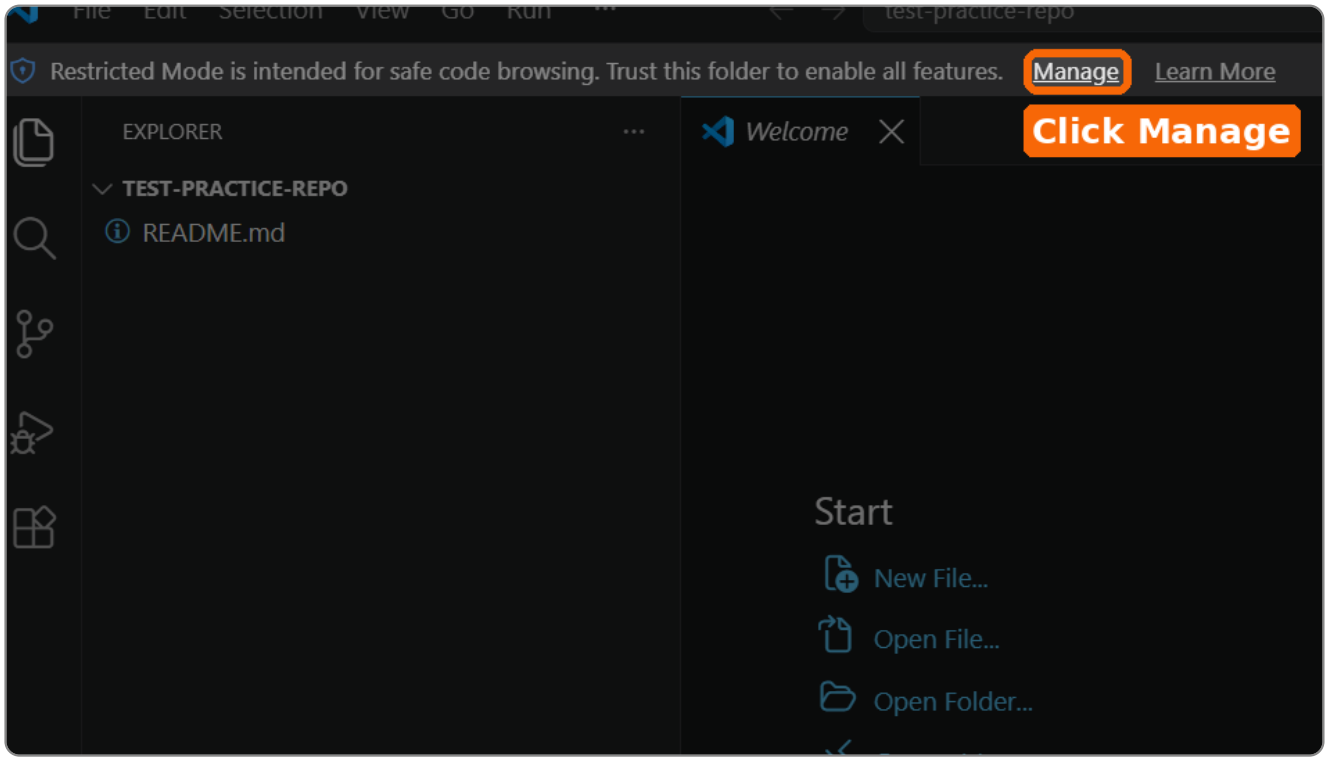

16

VS Code › Restricted Mode

Click **Manage** in the bar at the top.

If something goes wrong
A window asks "Do you trust the authors…?" instead: click **Yes, I trust the authors** and go to the last step.

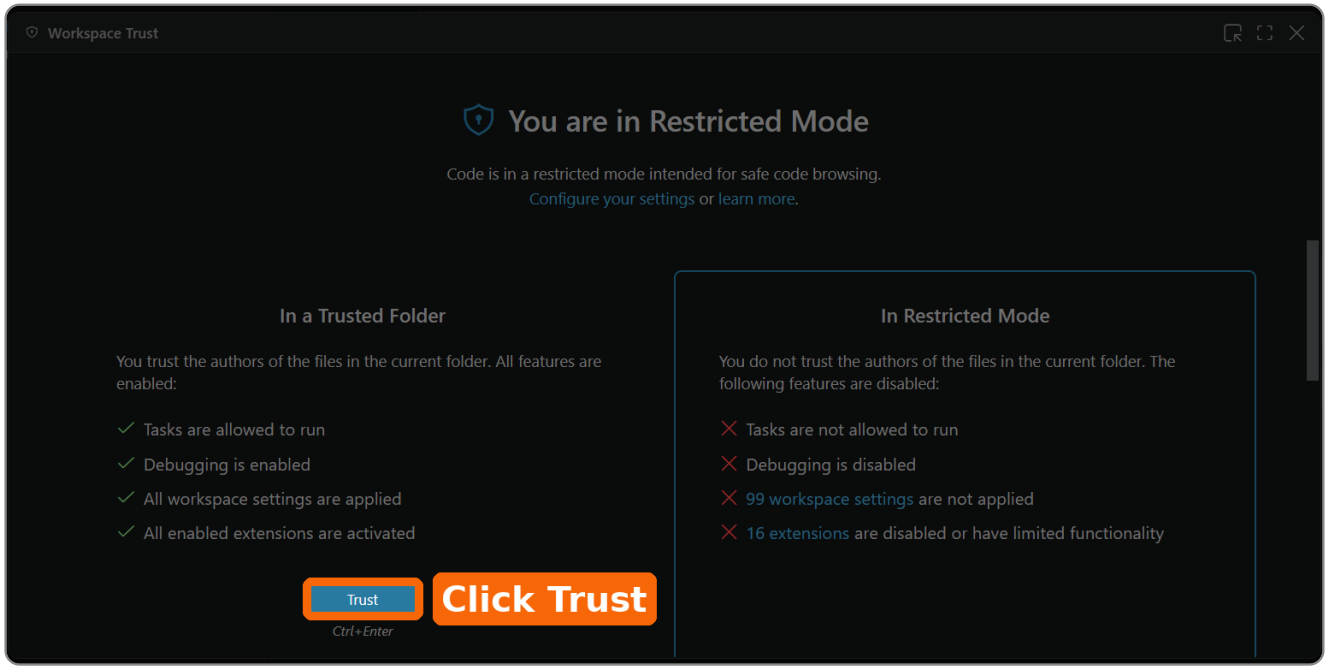

17

VS Code › Workspace Trust

Click **Trust**.

Close the **Workspace Trust** tab.

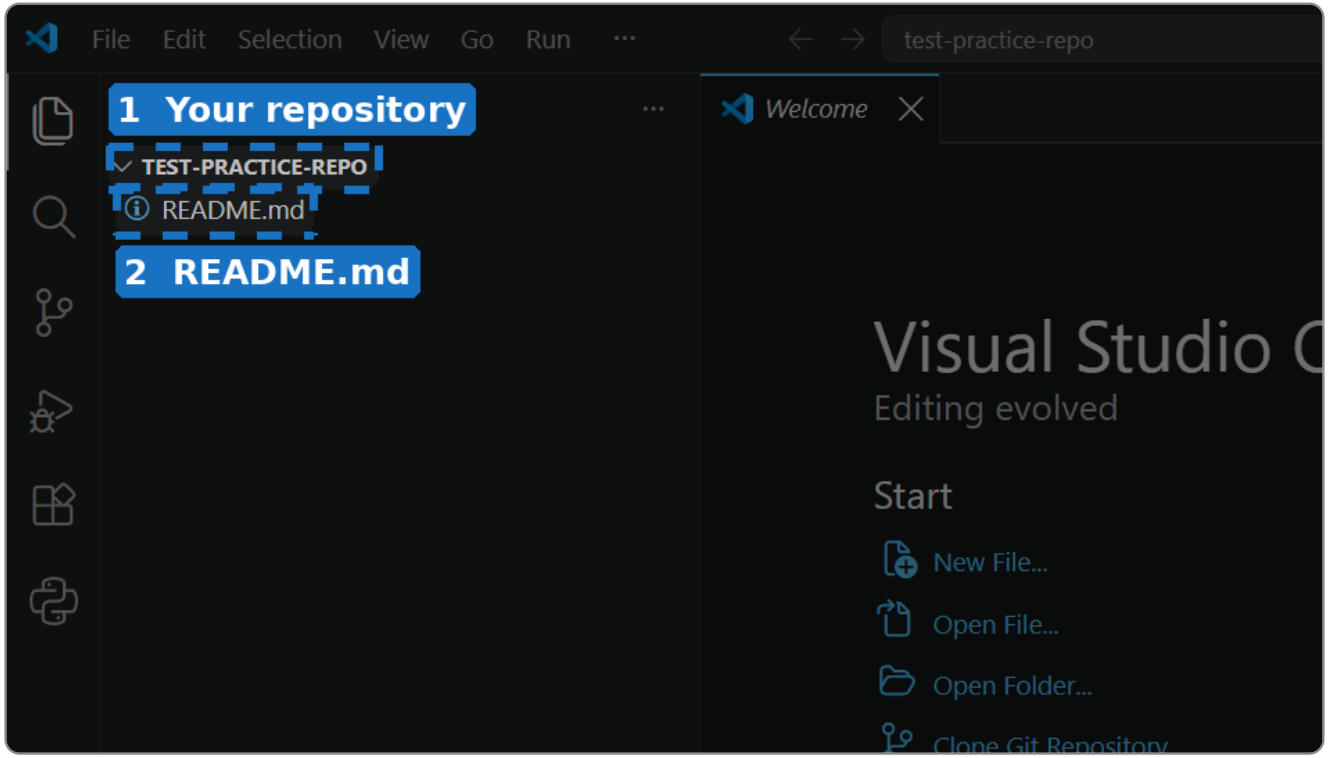

18

VS Code › Explorer

Look at the Explorer on the left.

> **Check:** your repository's name is at the top, with `README.md` inside.

Next lesson
Open VS Code and choose **File** › **Open Recent**, then your repository. You only clone once on each computer.

Push to back up
Your repository is in Documents on this computer. Commit and push in VS Code every lesson, so your work is safe on GitHub.

Checkpoint

- [ ] I created a private repository in `Marcellin-College-DGT` with a README.
- [ ] I cloned it into `Documents` › `GitHub`.
- [ ] I opened and trusted it in VS Code.
