Install GitHub Desktop

Digital Technologies · Personal computers

You will

- download and install GitHub Desktop
- open it for the first time

You need

- a Windows computer you're allowed to install apps on (Chromebooks can't run GitHub Desktop)
- Git installed is a good idea (see the guide Install Git)

Before you start

- On school computers GitHub Desktop is already installed.
- GitHub Desktop installs itself: there are no screens to click through.

 Click here  Look here

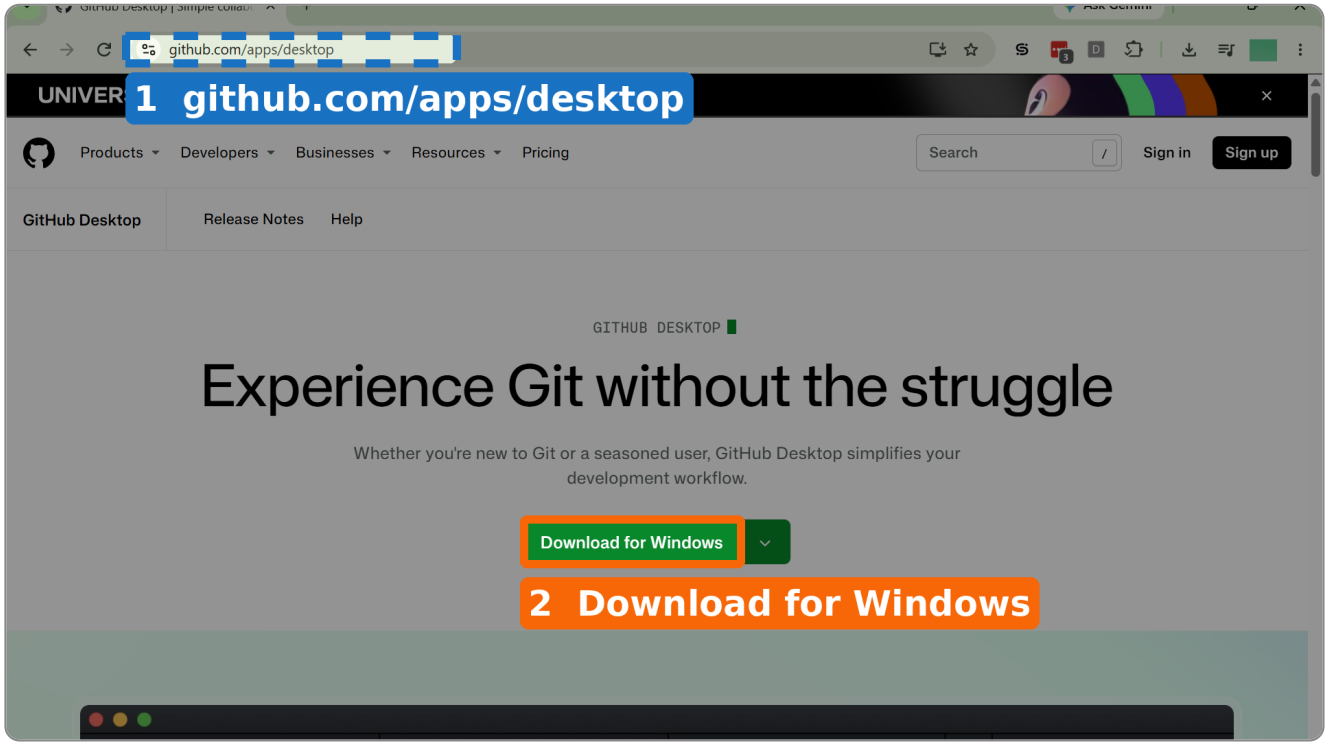

1

Chrome › desktop.github.com

Go to `desktop.github.com`.

Click **Download for Windows**.

The page moves to `github.com/apps/desktop`.
That's fine.

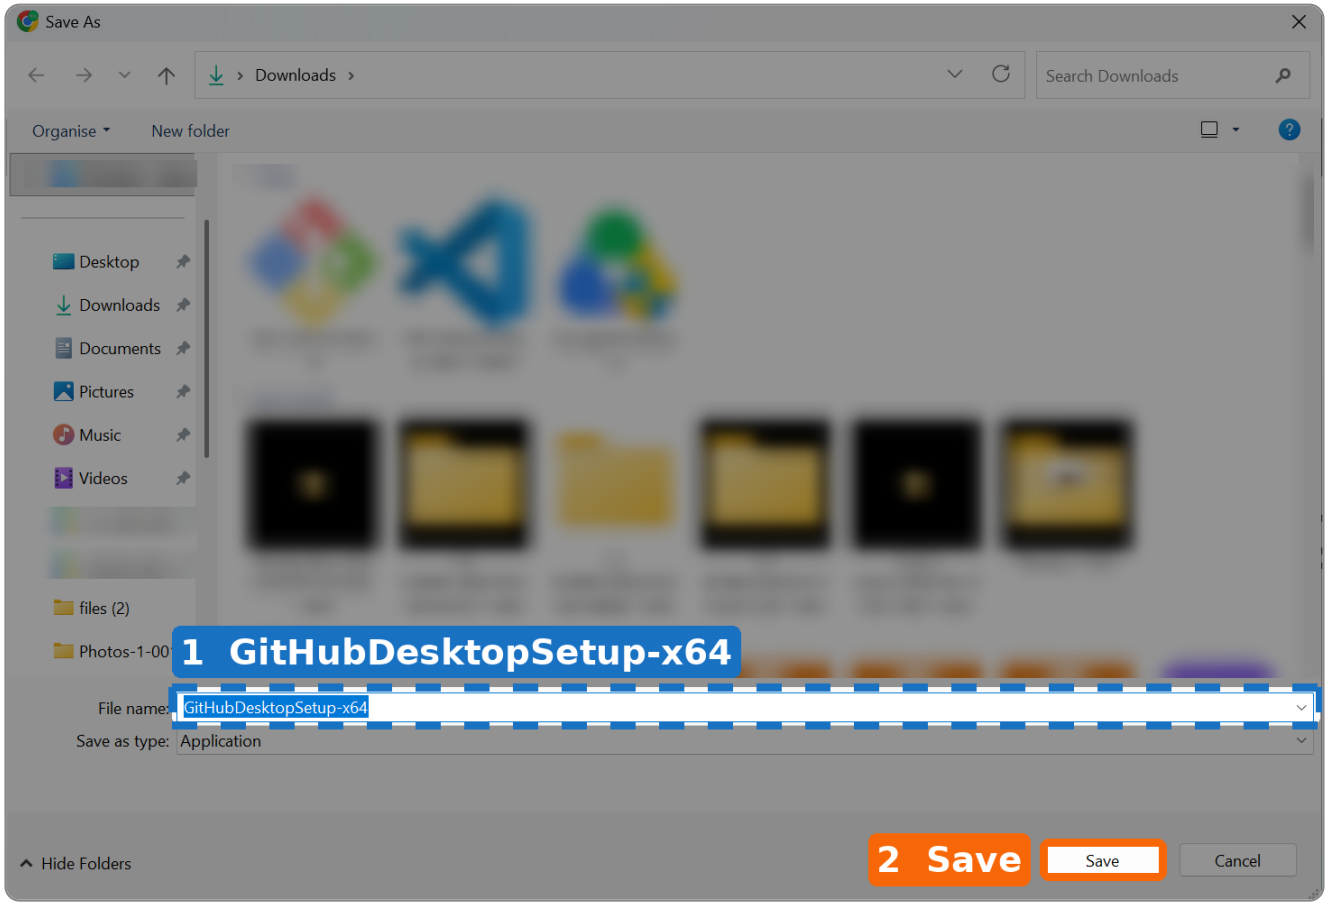

2

Chrome › Save As › only if it opens

Leave the name as it is.

Click **Save**.

Most computers skip this window and download straight away.

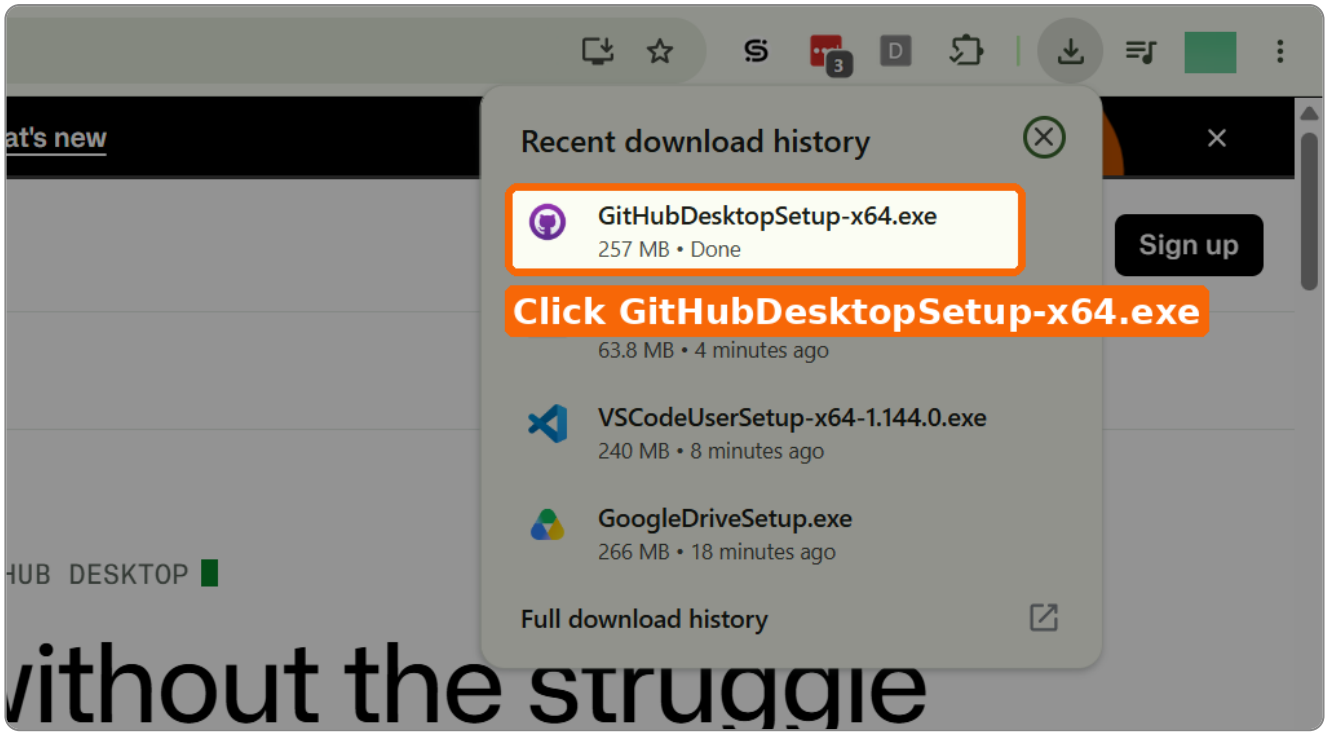

3

Chrome › Downloads

When it says Done, click the GitHub Desktop file.

Can't see it? Press Ctrl + J to open your downloads.

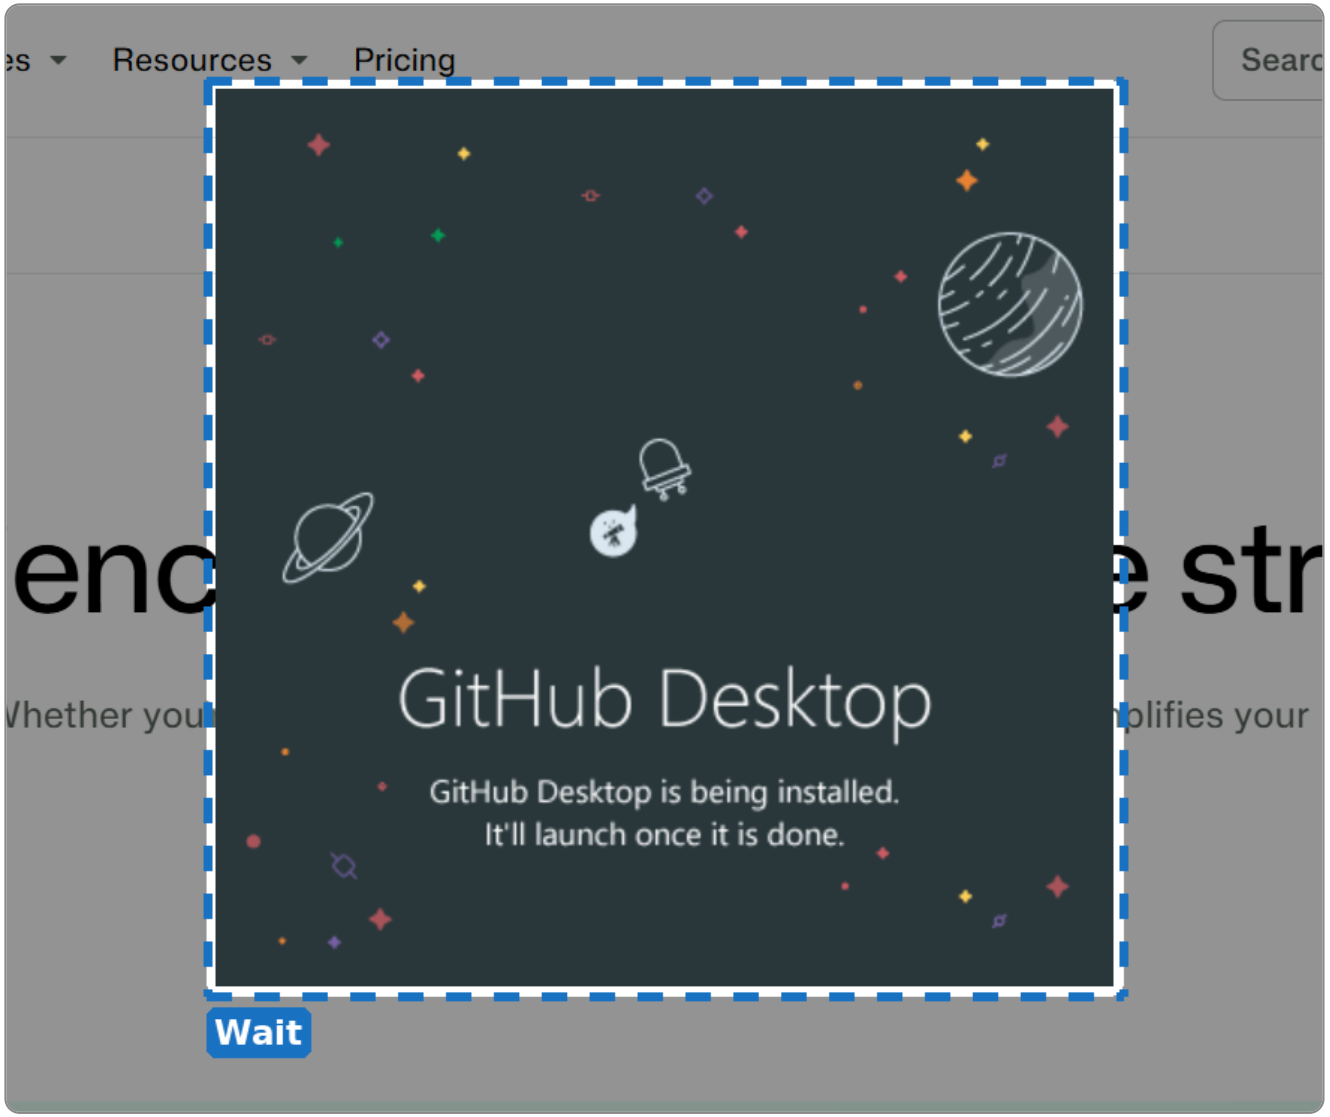

4

GitHub Desktop › Installing

Wait. GitHub Desktop installs by itself, then opens.

This takes a minute or two.

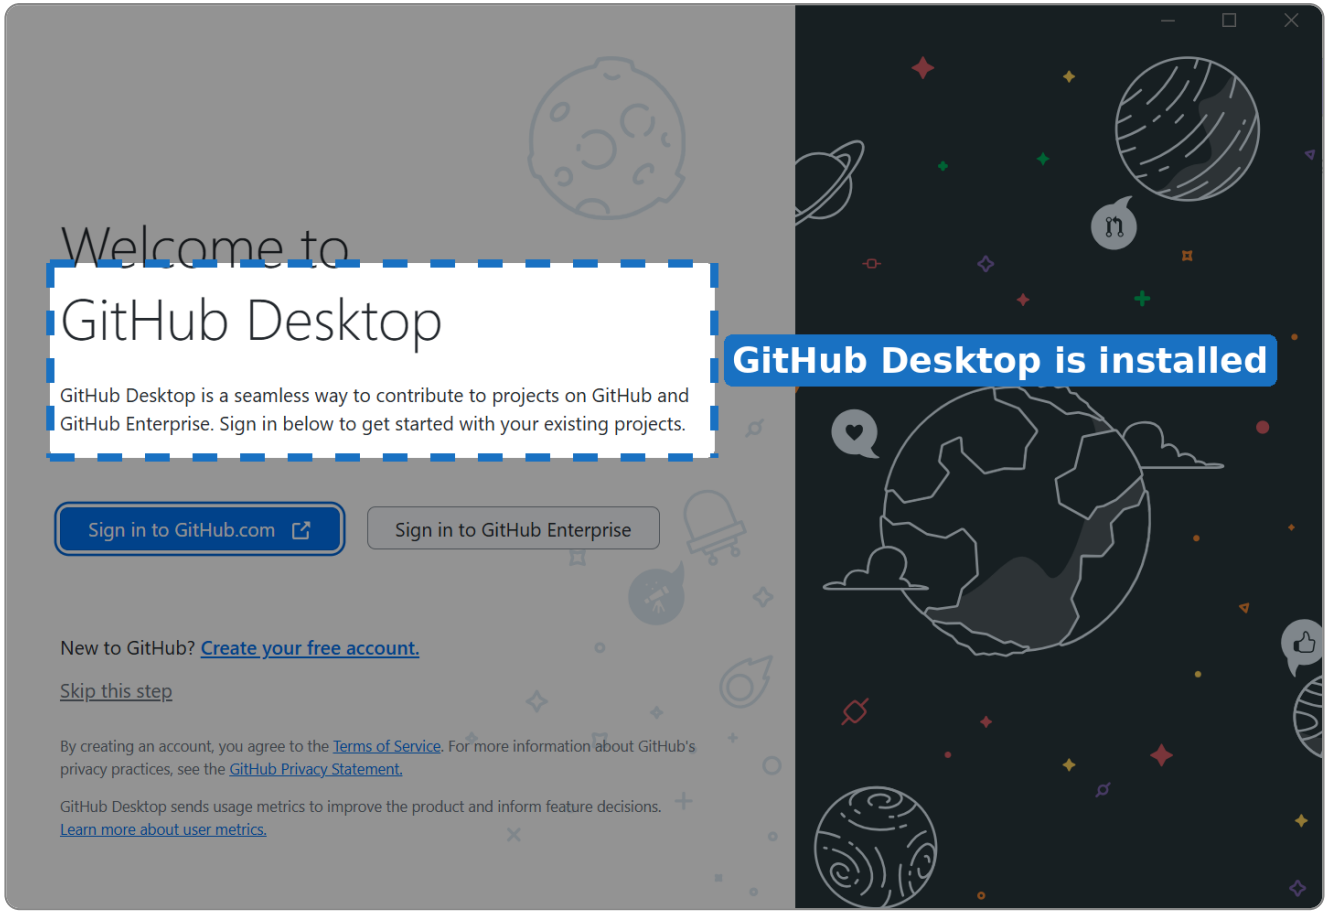

5

GitHub Desktop › Welcome

GitHub Desktop opens on its Welcome screen.

Stop here. Signing in happens when you put your first project on GitHub (see the guide Put a Godot project on GitHub).

> **Check:** "Welcome to GitHub Desktop".

Finding it again

Start › type github › click GitHub Desktop. Right-click it in the taskbar and choose Pin to taskbar to keep it there.

Checkpoint

- [ ] I can install GitHub Desktop.
- [ ] GitHub Desktop opens on my computer.
