Move and rename files in Godot

Digital Technologies · School computers

You will

- rename a file without breaking your game
- sort `assets` into folders, like `images` and `sounds`
- commit the moved files

You need

- your Godot project, with some files in assets (see the guide Add images and sounds)

Before you start

- Rename and move files in Godot's FileSystem only. Godot then fixes every scene that uses them.
- File names: lowercase, with underscores.

 Click here  Look here

1

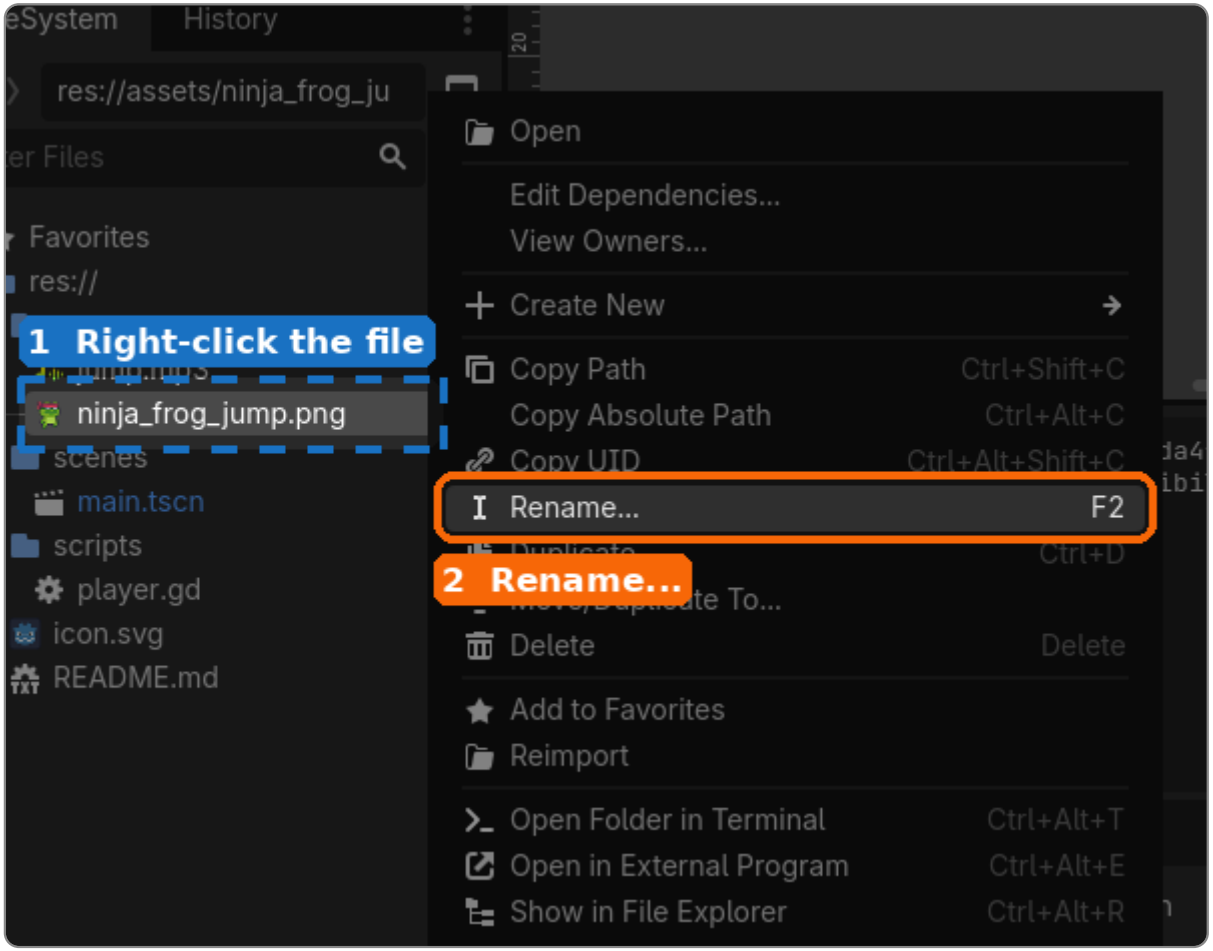

Godot › FileSystem

Right-click the file you want to rename.

Click **Rename...**

Or click the file and press F2.

If something goes wrong
You renamed or moved a file in File Explorer: close Godot, change it back in File Explorer, then open Godot and do it here instead.

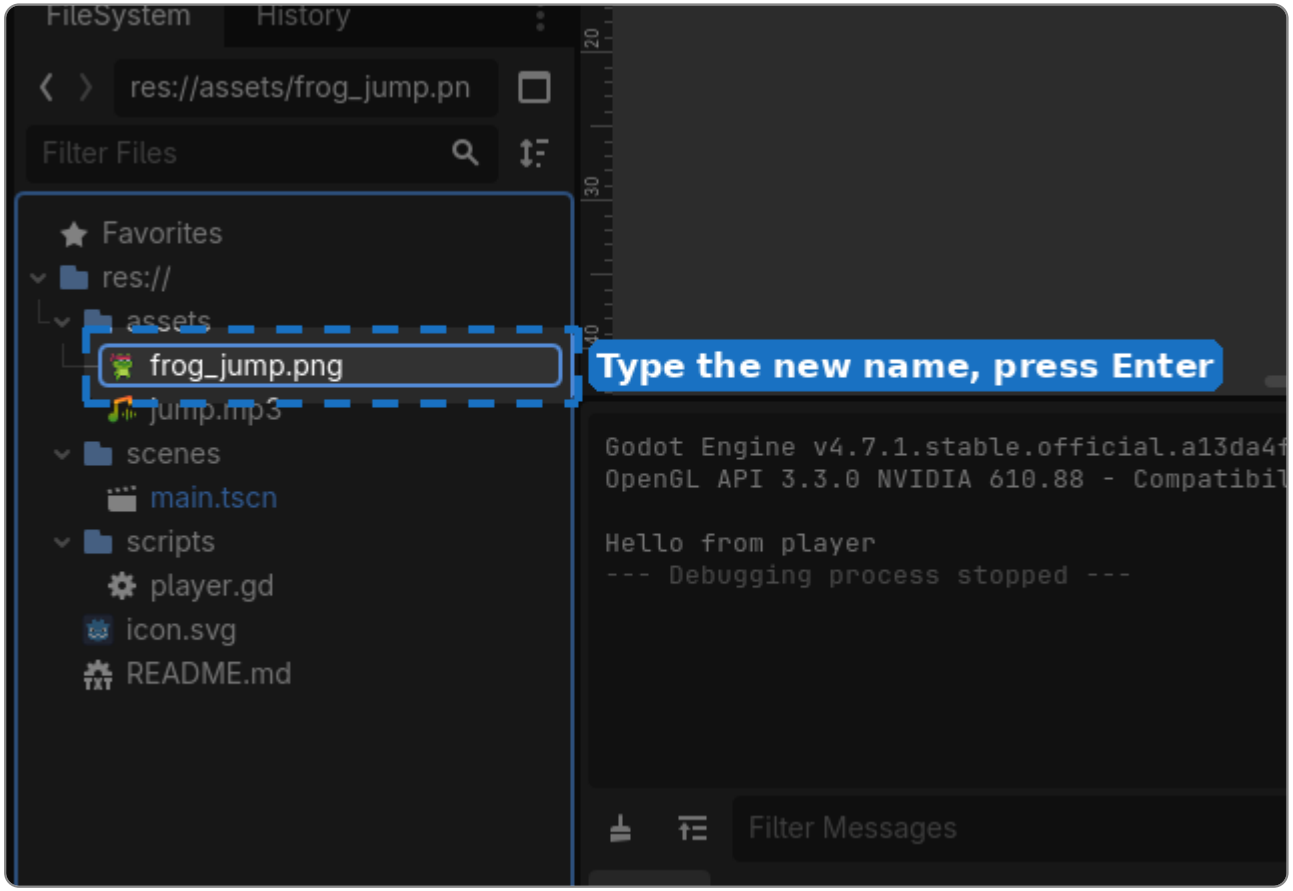

2

Godot › FileSystem › rename

Type the new name. Keep the ending, like `.png`.

Press `Enter`.

For example, `ninja_frog_jump.png` becomes `frog_jump.png`.

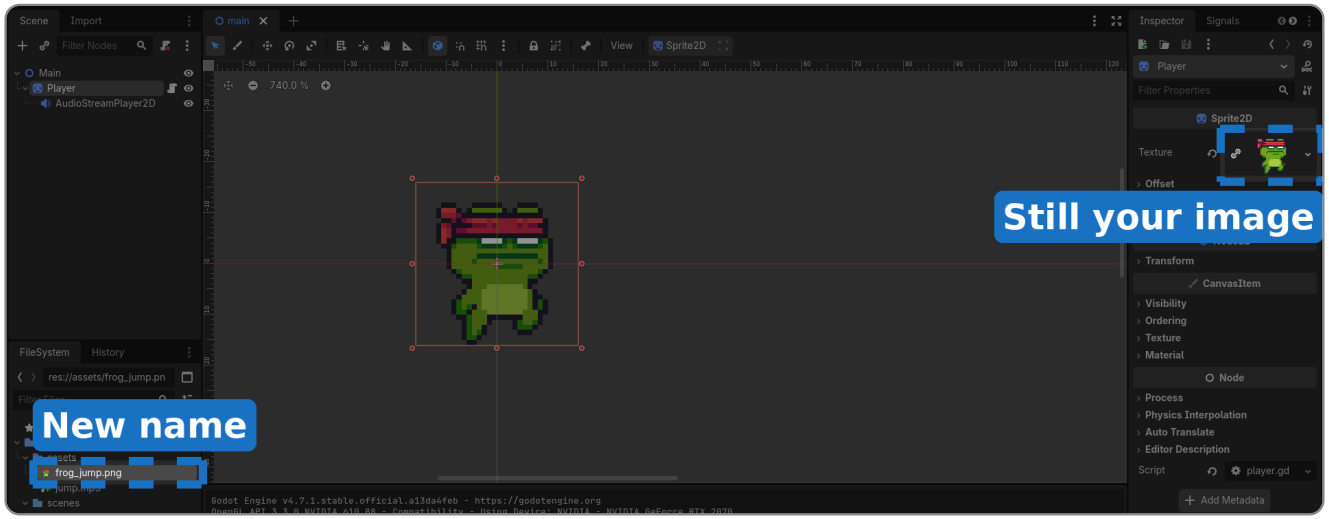

3

Godot › Inspector

Click a node that uses the file (here, **Player**).

Check it still shows your image.

Godot changed the name everywhere the file is used.

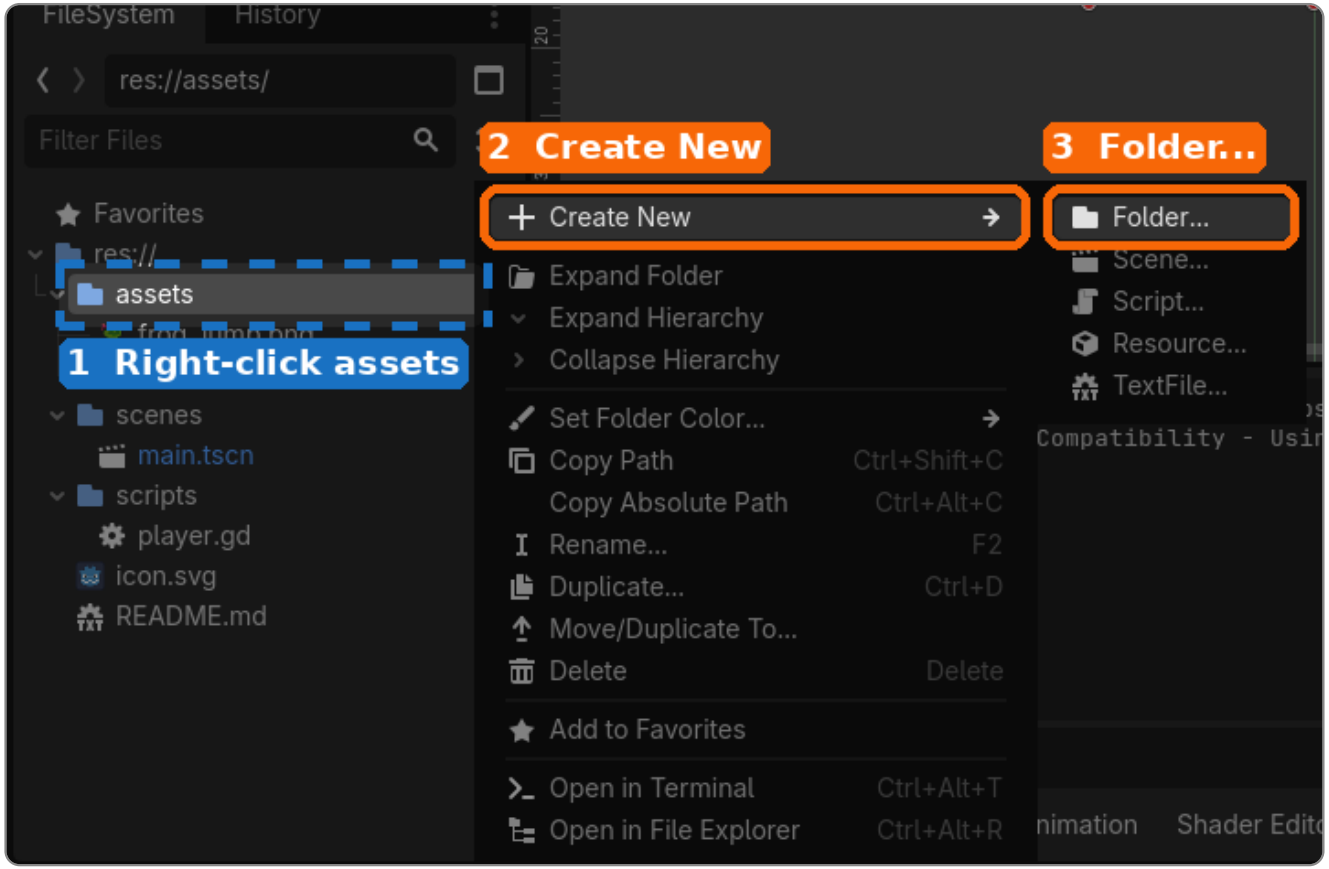

4

Godot › FileSystem

Right-click `assets`.

Click **Create New** › **Folder...**

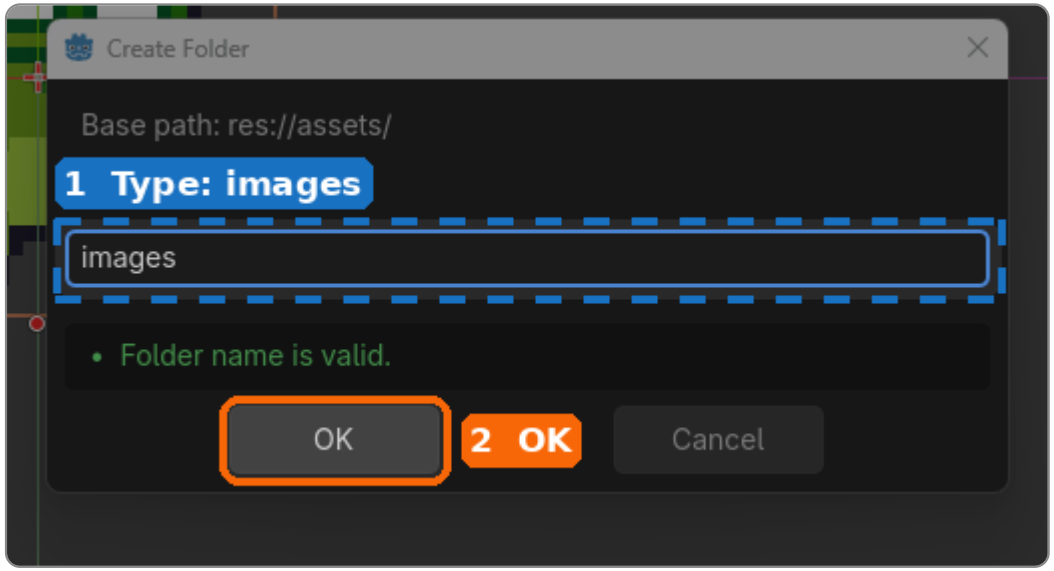

5

Godot › Create Folder

Type `images`.

Click **OK**.

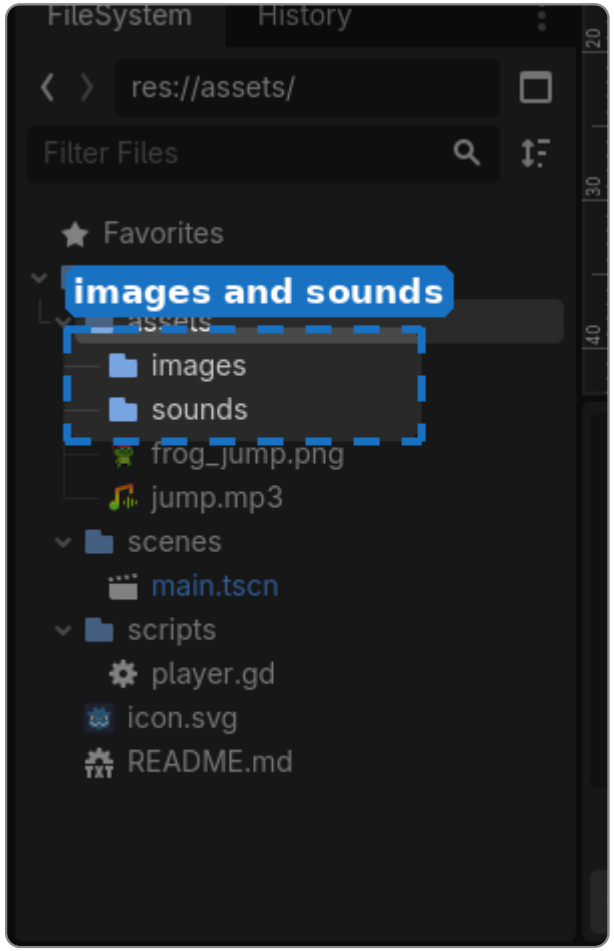

6

Godot › FileSystem

Make a `sounds` folder inside `assets` the same way.

> **Check:** `assets` has an `images` folder and a `sounds` folder.

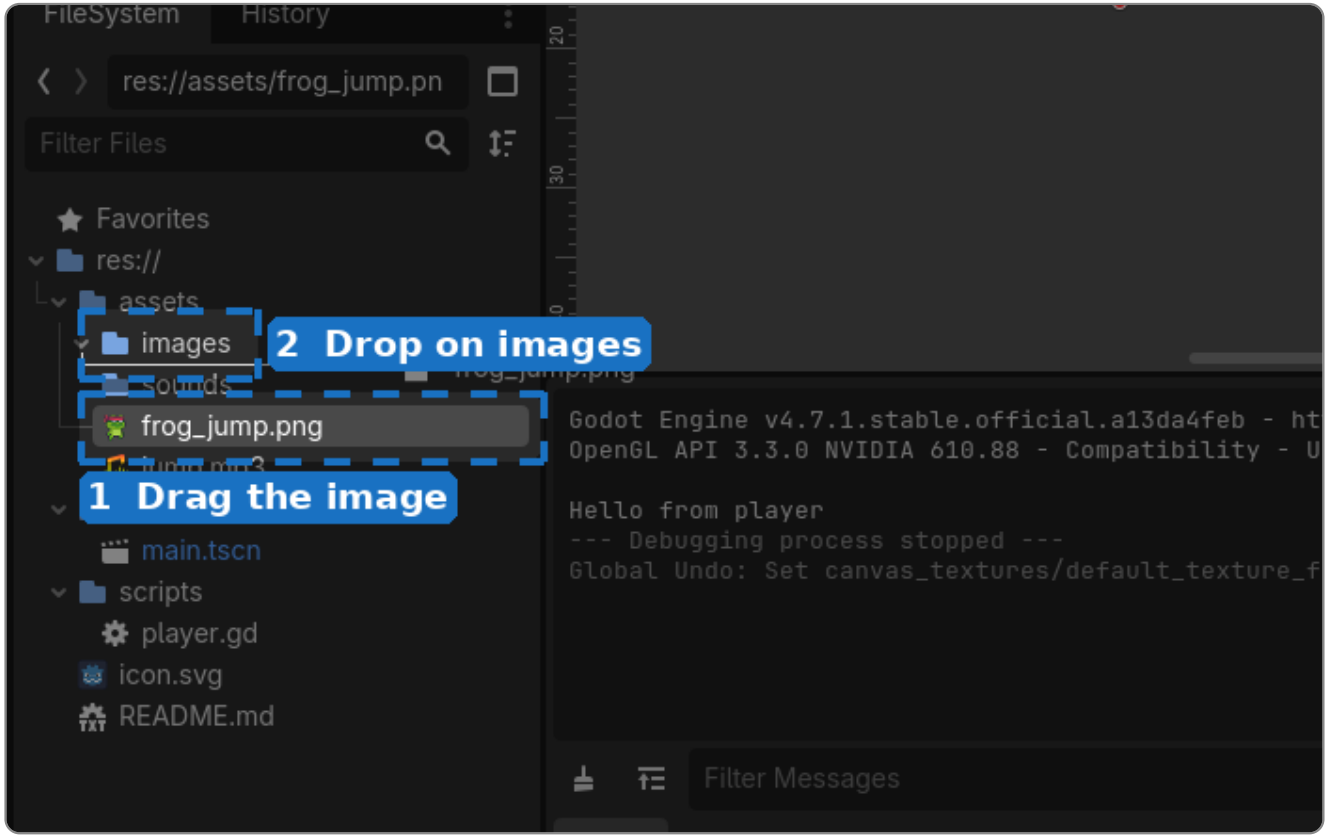

7

Godot › FileSystem › move

Drag your image onto the `images` folder.

To move several files at once, hold Ctrl and click each one, then drag them together.

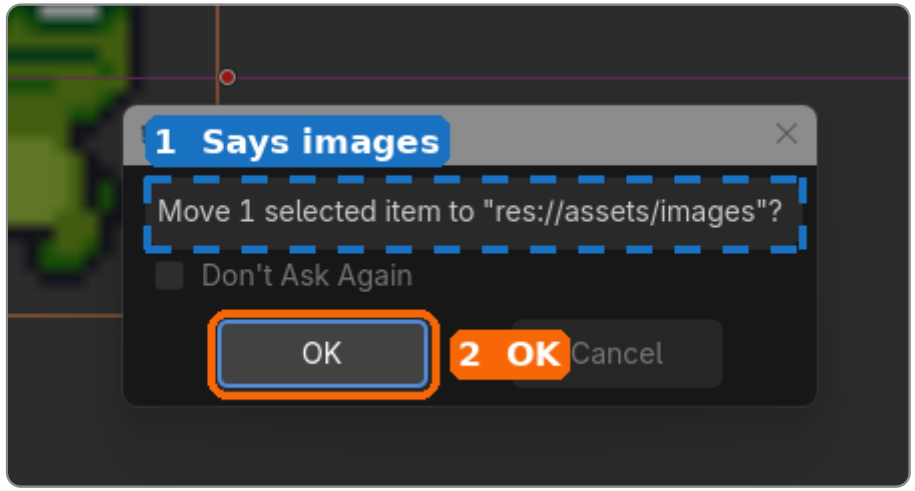

8

Godot › Please Confirm

Check it names the right folder.

Click **OK**.

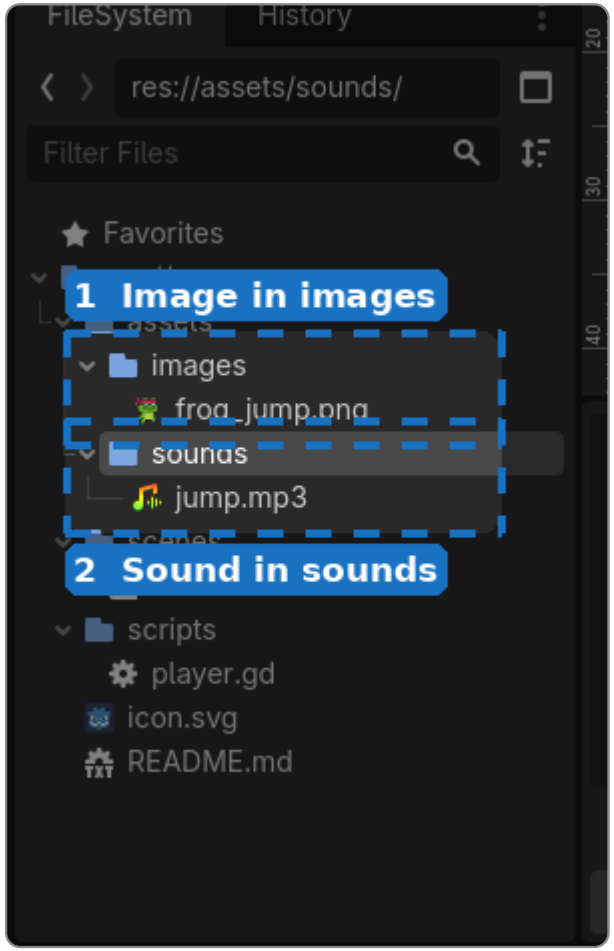

9

Godot › FileSystem › sounds

Drag your sound onto `sounds` the same way, and click **OK**.

> **Check:** each file is in its own folder.

10

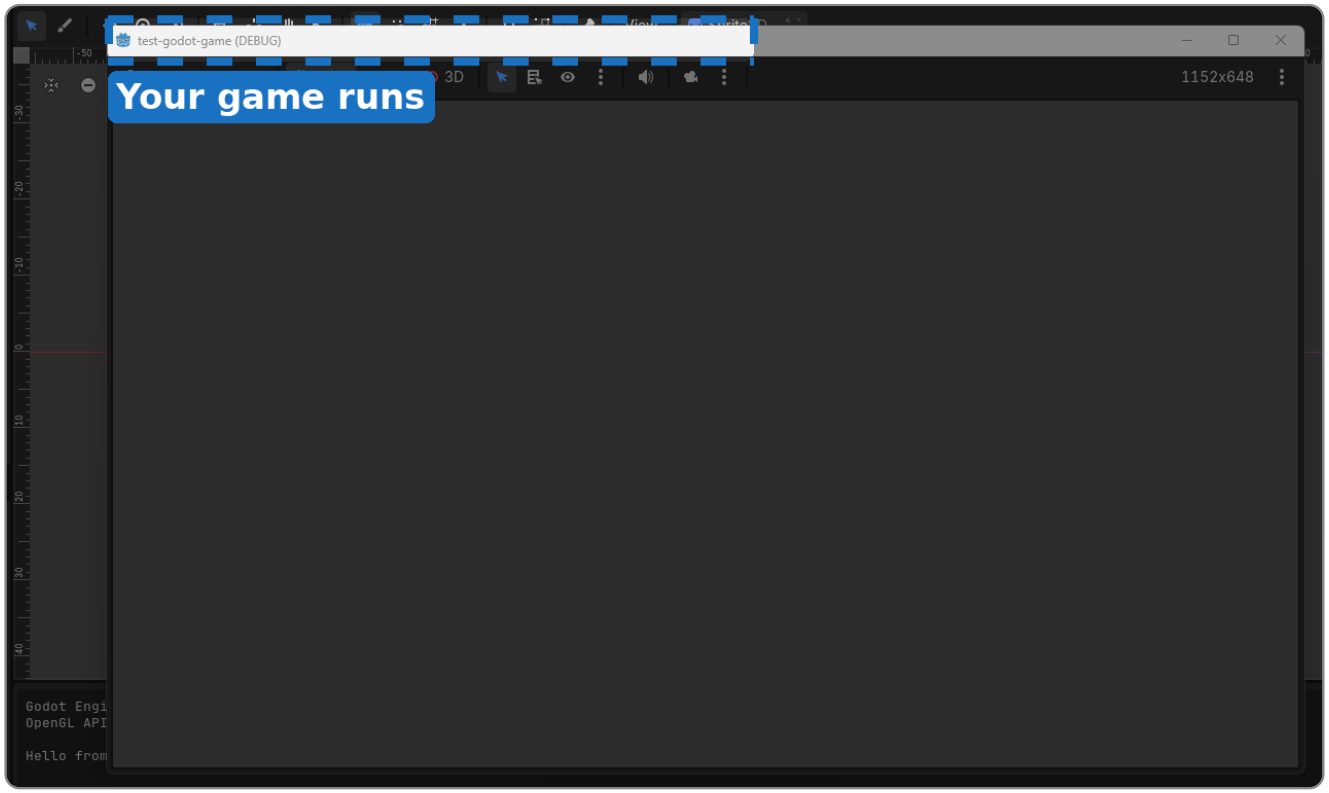

Godot › Your game window

Press F5.

Check your game runs and your sound plays.

Press F8 to stop.

Everything still works, because Godot updated the scenes for you.

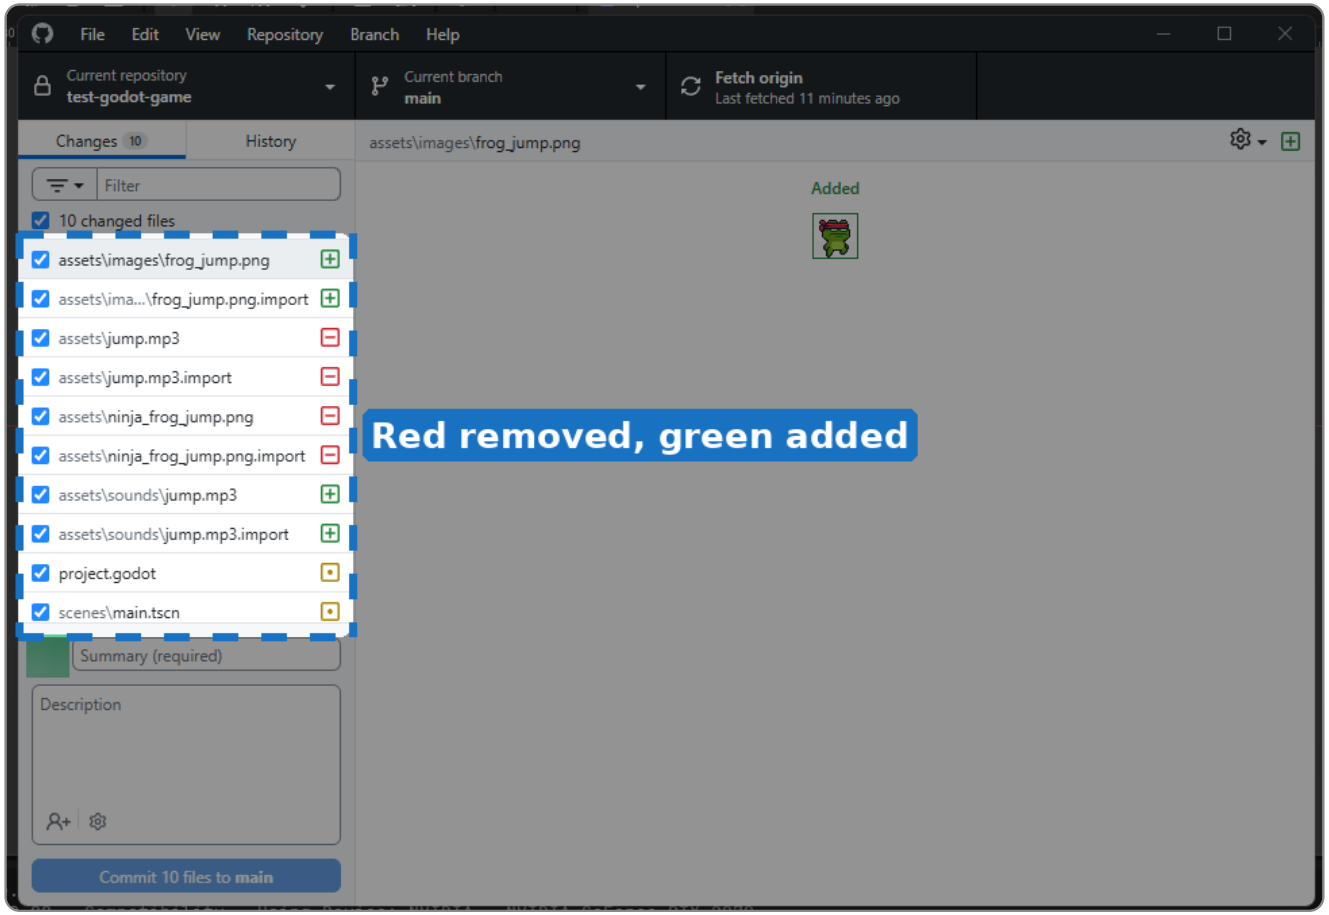

11

GitHub Desktop › Changes › if your project is on GitHub

Commit and push with GitHub Desktop, as usual, with every file ticked.

A moved file shows twice: red where it was, and green where it is now. That's normal.

Files live in Godot

Rename, move and delete files in Godot's FileSystem. Use File Explorer only to bring new files in.

A tidy project

`scenes` for scenes, `scripts` for scripts, and `assets` for images and sounds, with folders inside it as your game grows.

Checkpoint

- [ ] I can rename a file in Godot.
- [ ] I can make folders and move files into them.
- [ ] My game still runs after moving files.
