Put a Godot project on GitHub

Digital Technologies · School computers

You will

- turn your Godot project folder into a repository with GitHub Desktop
- publish it, private, to `Marcellin-College-DGT` on GitHub

You need

- a Godot project in `Documents` › `GitHub` (see the guide Make a Godot project)
- your GitHub account (see the guide Sign in to GitHub)

Before you start

- You only do this once for each project.
- Made your project somewhere else? Close Godot. Move the project folder into `Documents` › `GitHub`. In Godot's Project Manager, click Import and choose its `project.godot`.

 Click here  Look here

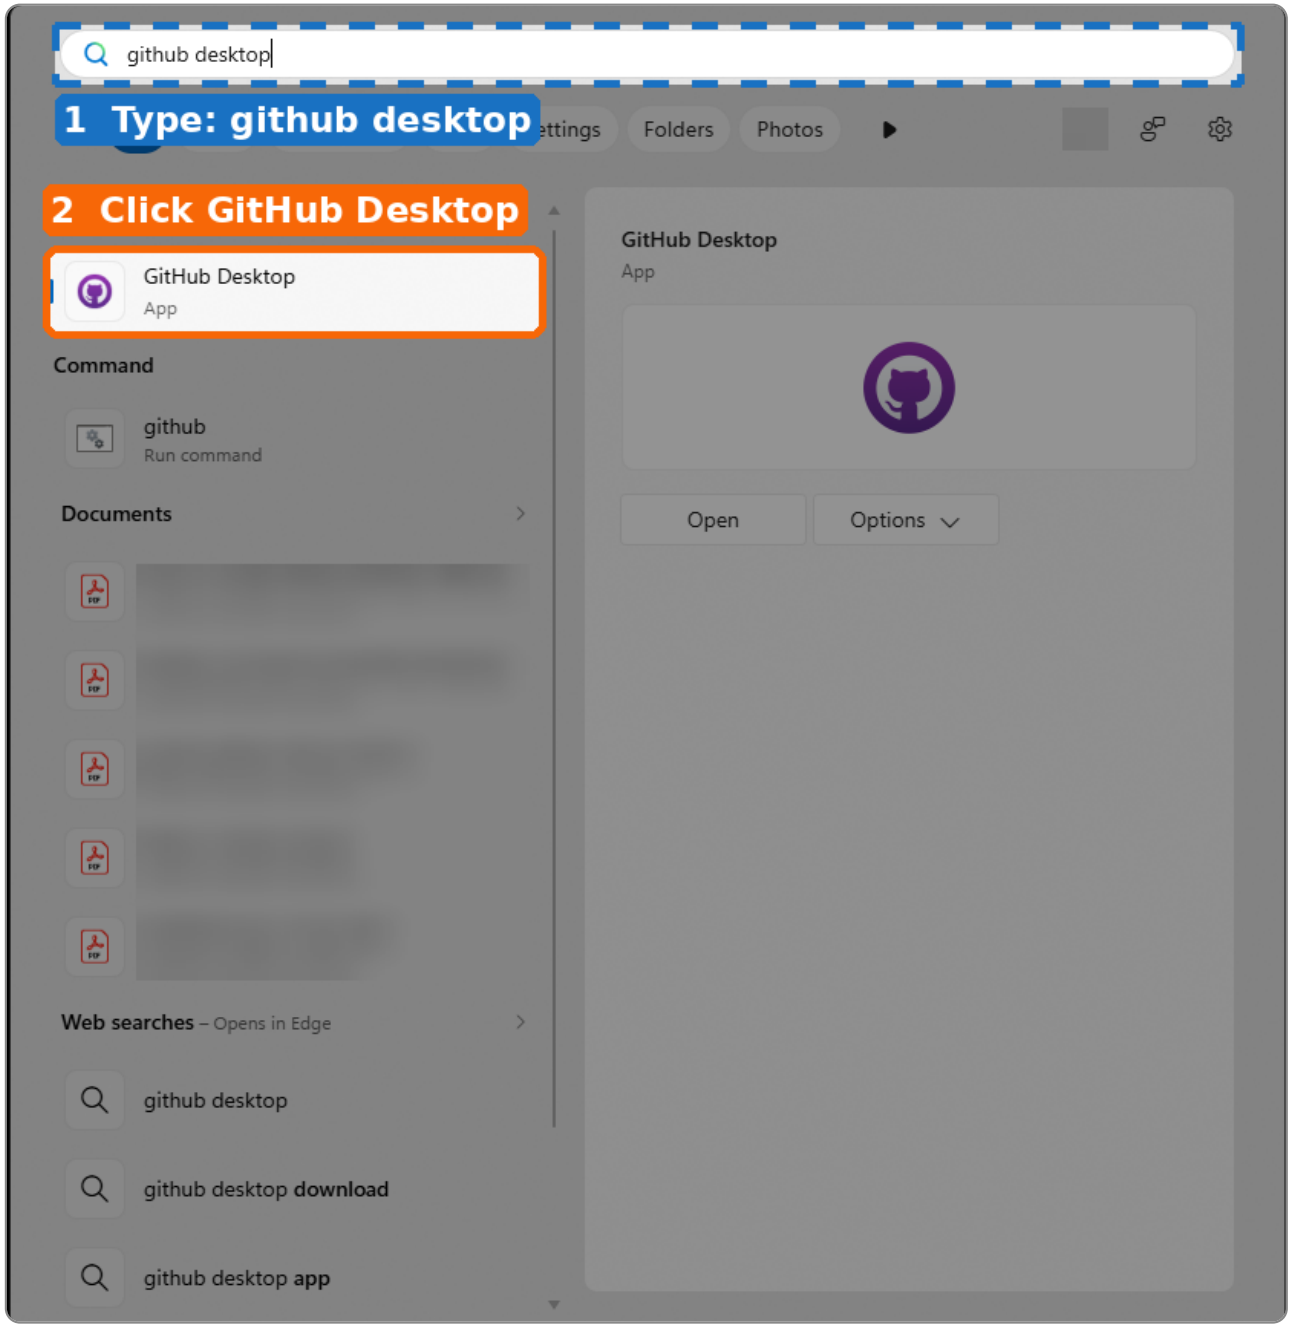

1

Windows › Start menu

Click **Start**.

Type `github desktop`.

Click **GitHub Desktop**.

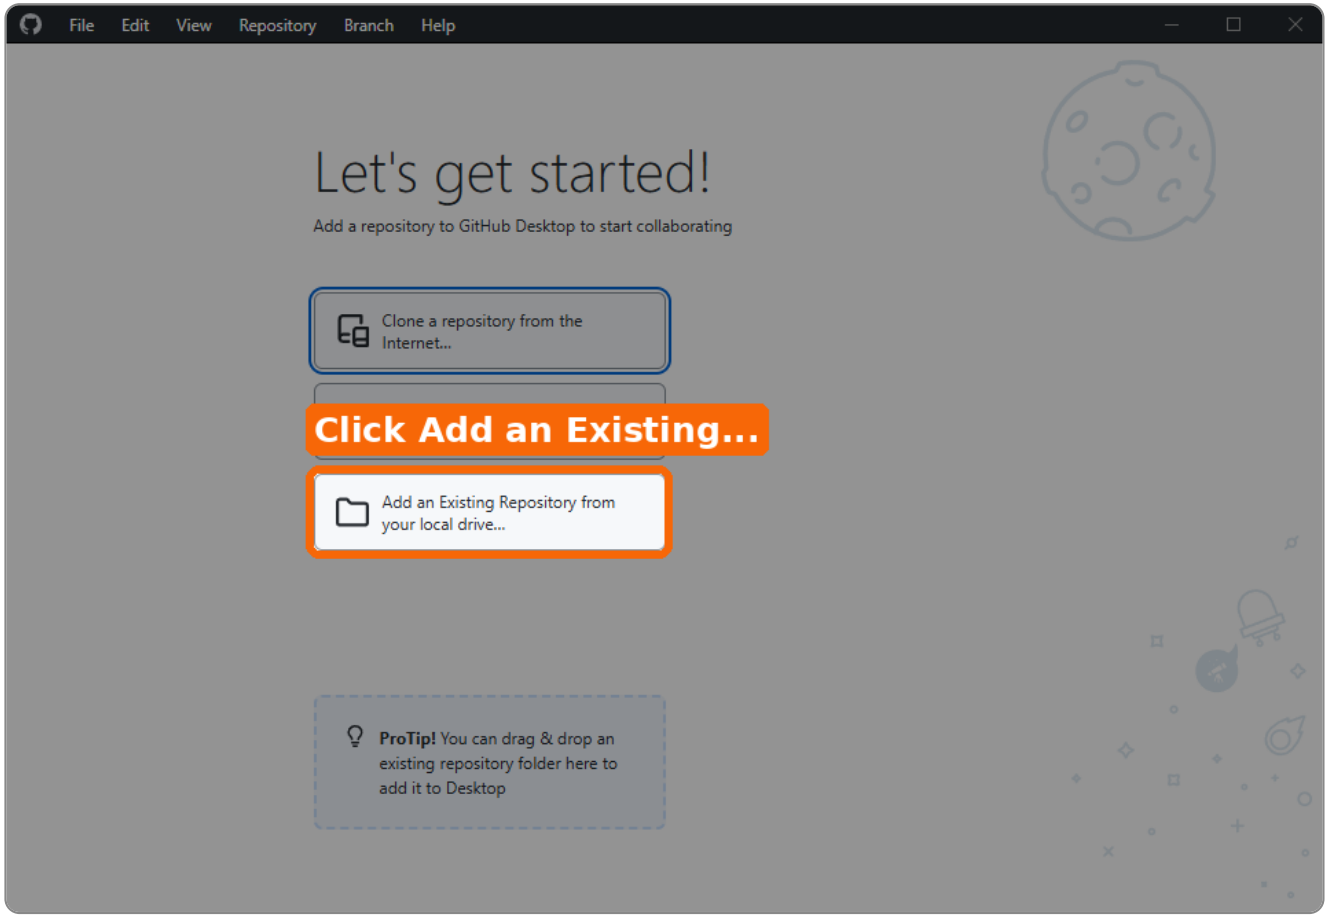

2

GitHub Desktop › Let's get started!

Click **Add an Existing Repository from your local drive...**

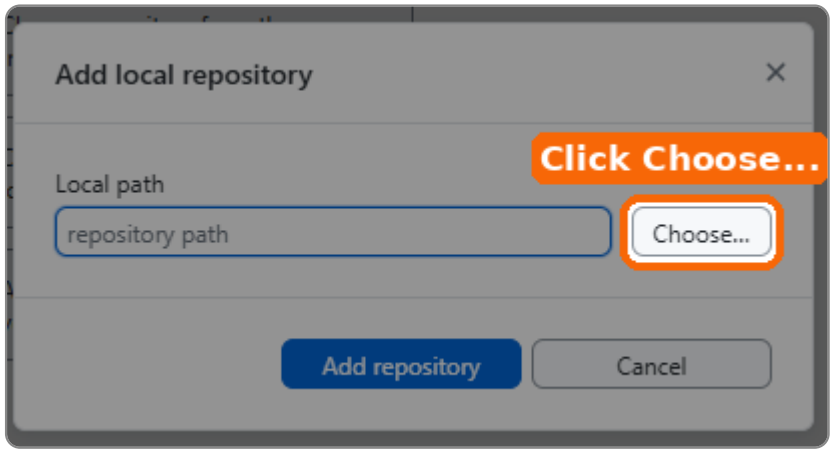

If something goes wrong
You don't see Let's get started!: you already have a repository in GitHub Desktop. Click **File** › **Add local repository...** instead.

3

GitHub Desktop › Add local repository

Click **Choose...**

4

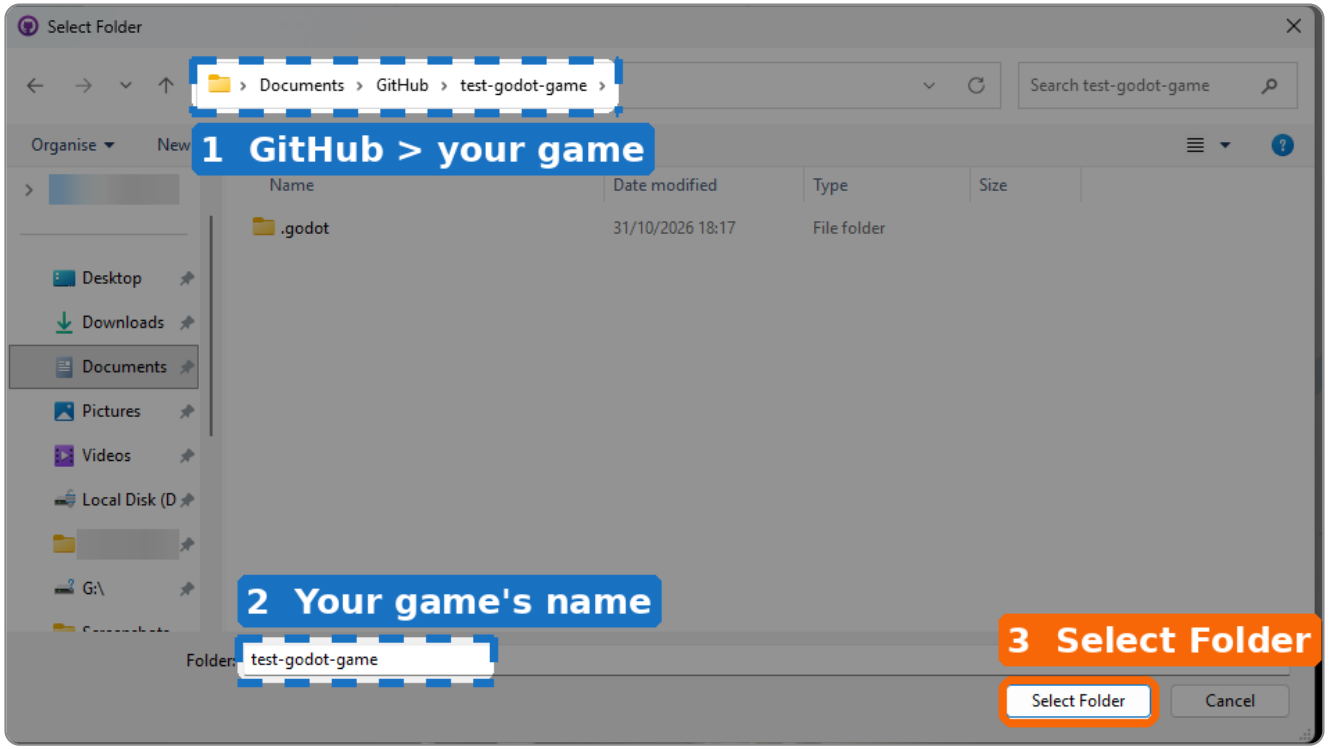

Windows › Select Folder

Open `Documents` › `GitHub`, then double-click your game's folder.

Click **Select Folder**.

You're inside the right folder when you see the `.godot` folder.

> **Check: Folder** shows your game's name.

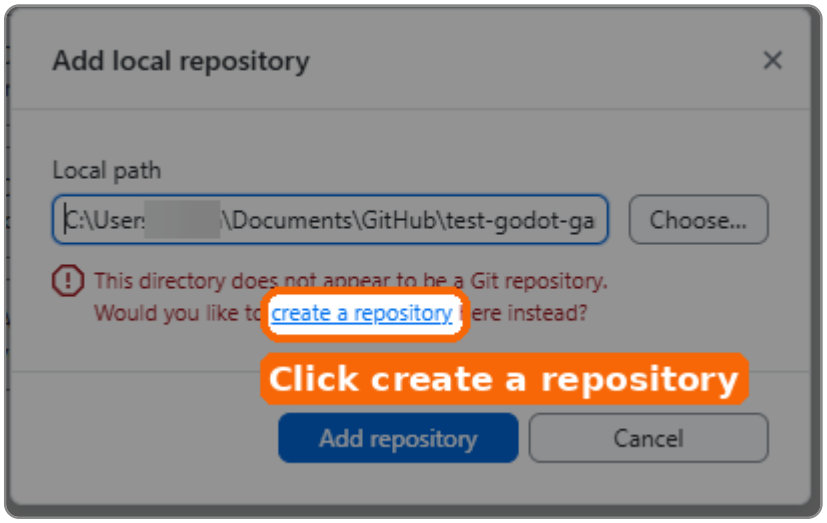

5

GitHub Desktop › Add local repository

Click **create a repository** in the red message.

The message is normal. Your folder isn't a repository yet, so GitHub Desktop offers to make one.

6

GitHub Desktop › Create a new repository

Check **Local path** ends in `Documents\GitHub`.

Tick **Initialize this repository with a README**.

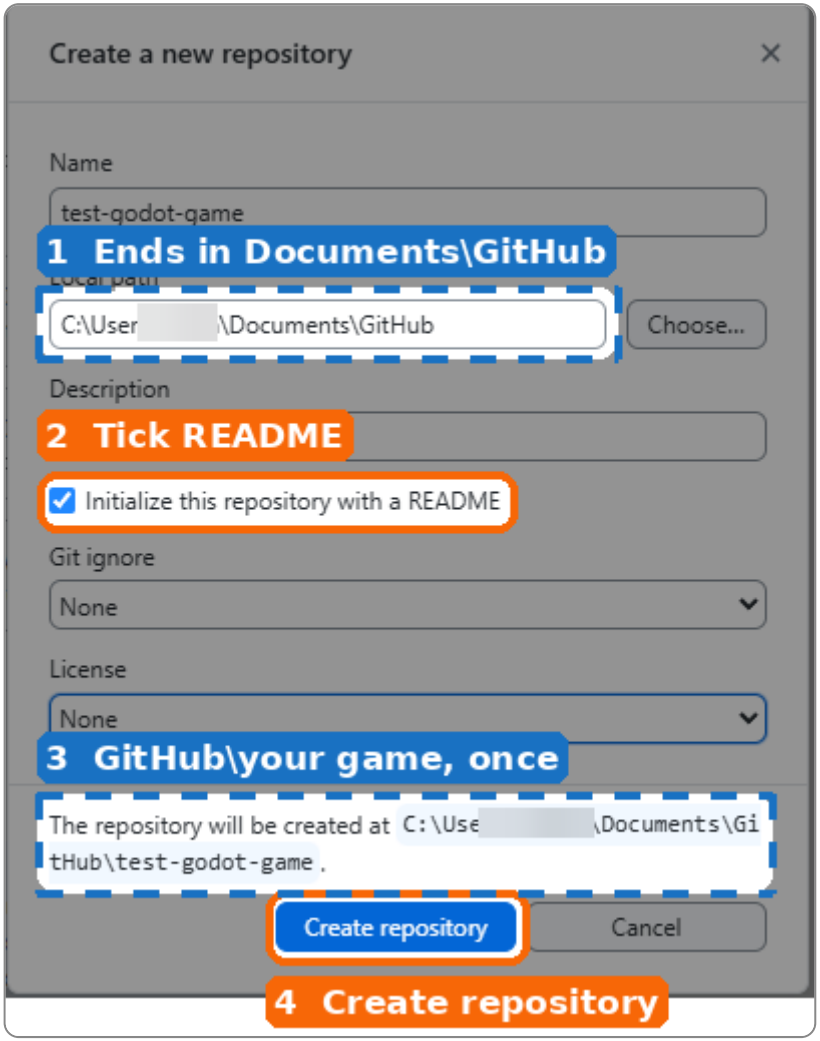

Leave **Git ignore** on **None**.

Click **Create repository**.

Godot already made a .gitignore.

> **Check:** the line at the bottom ends in GitHub, then your game's name, once.

If something goes wrong
Your game's name is there twice: click **Choose...** and choose the `GitHub` folder, one level up.
Your project has no .gitignore: choose **Godot** in **Git ignore**.

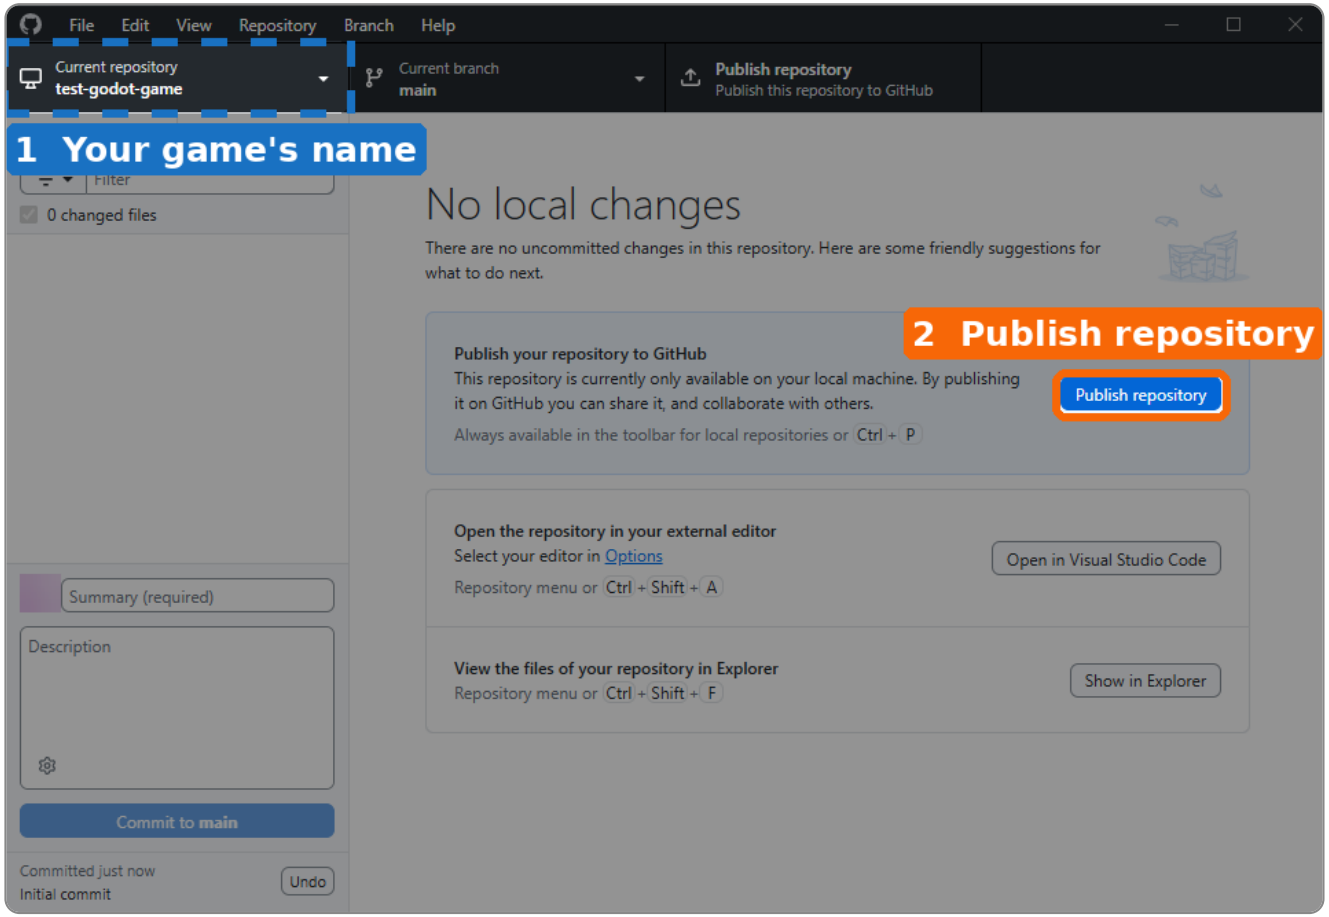

7

GitHub Desktop › your repository

Check **Current repository** shows your game's name.

Click **Publish repository**.

Your project is now a repository on this computer. Publishing puts a copy on GitHub.

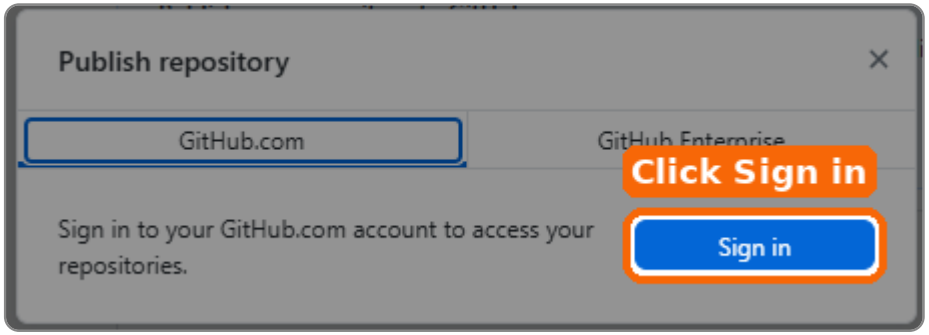

8

GitHub Desktop › Publish repository

Click **Sign in**.

First time on this computer only. Don't see Sign in? Skip the next three steps.

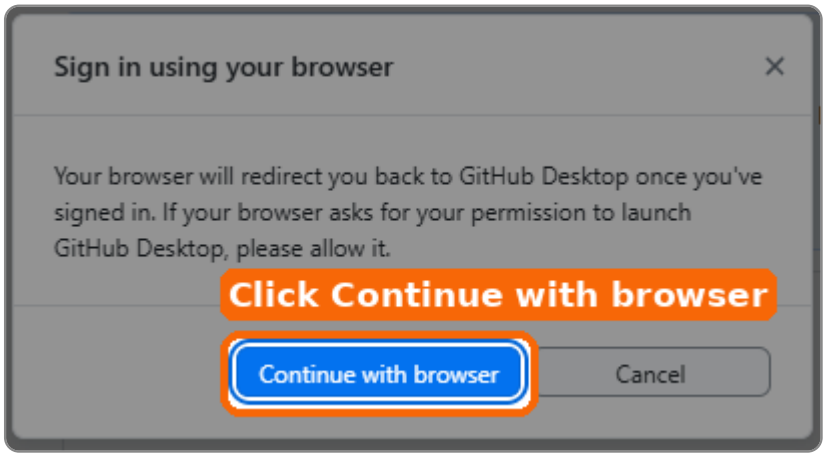

9

GitHub Desktop › Sign in using your browser

Click **Continue with browser**.

Chrome opens so you can sign in to GitHub.

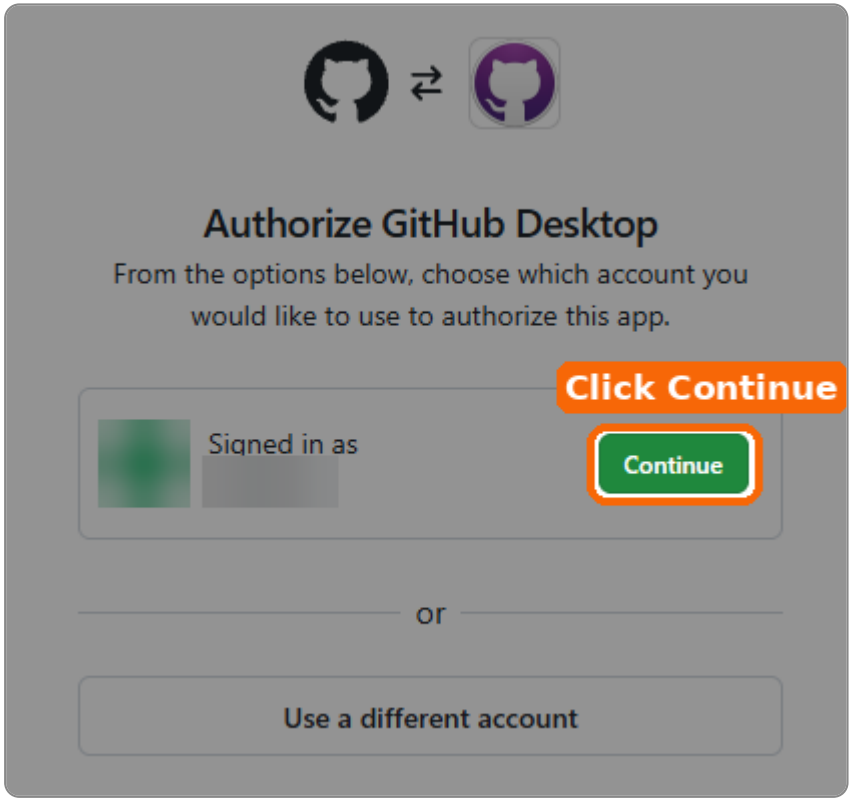

10

Chrome › Authorize GitHub Desktop

Check it shows your GitHub account.

Click **Continue**.

If something goes wrong
GitHub asks you to sign in: click **Continue with Google** and choose your school account.

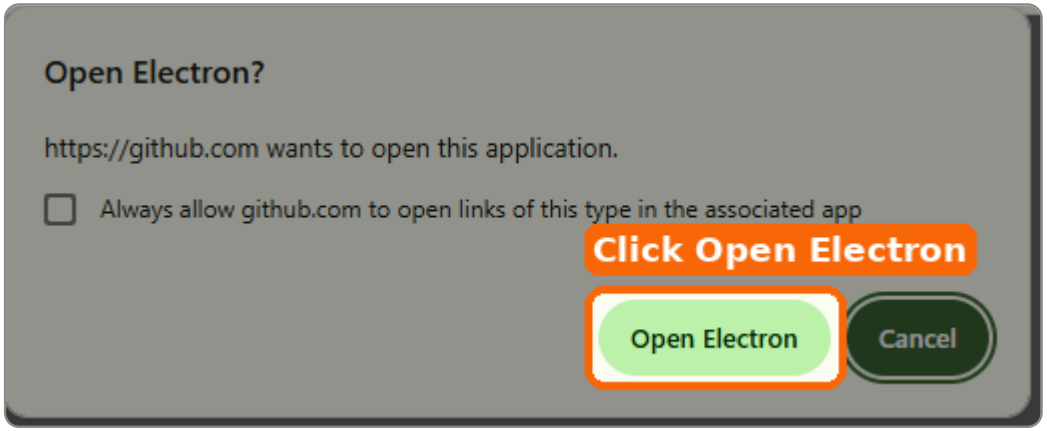

11

Chrome › Open Electron?

Click **Open Electron**.

Electron is GitHub Desktop. Chrome uses its technical name.

12

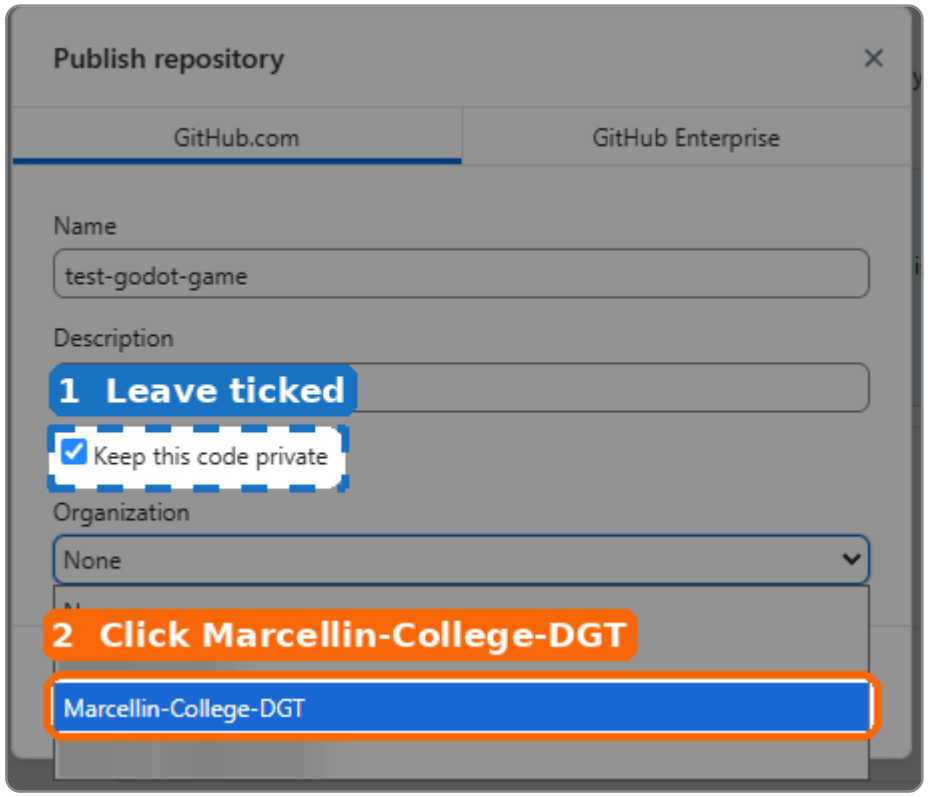

GitHub Desktop › Publish repository

Leave **Keep this code private** ticked.

Click the **Organization** list.

Click `Marcellin-College-DGT`.

> **If something goes wrong Marcellin-College-DGT isn't in the list:** you haven't joined the organisation yet. See the guide Sign in to GitHub, or ask your kaiako.

13

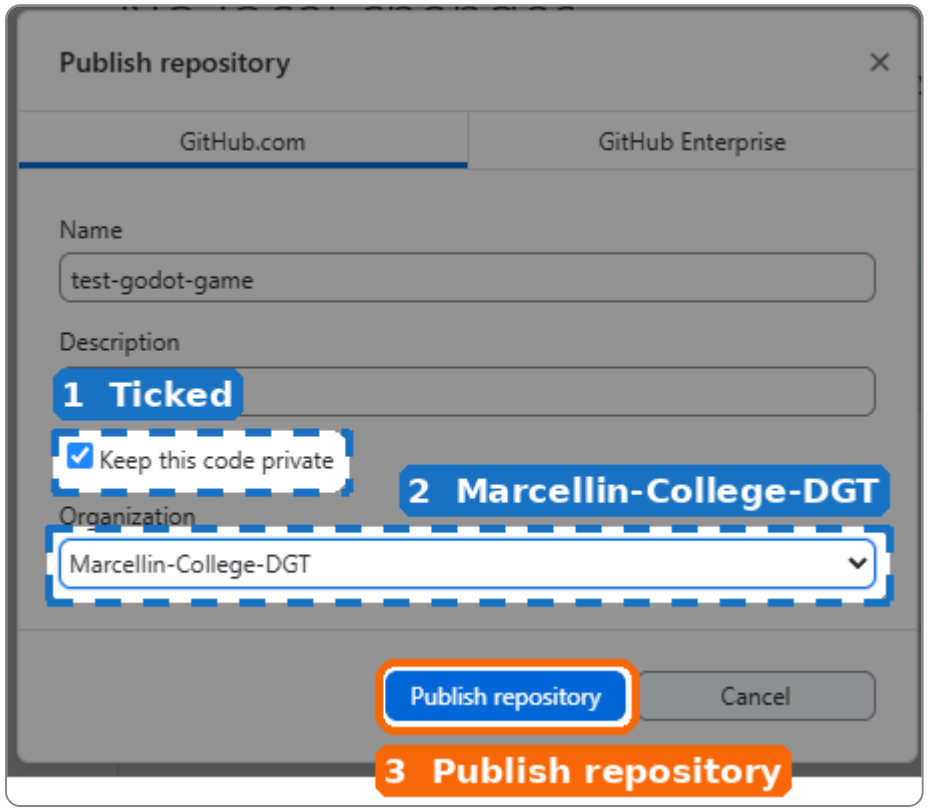

GitHub Desktop › Publish repository

Check **Keep this code private** is ticked.

Check **Organization** shows `Marcellin-College-DGT`.

Click **Publish repository**.

If Organization says None, your project goes to your own account instead of your class.

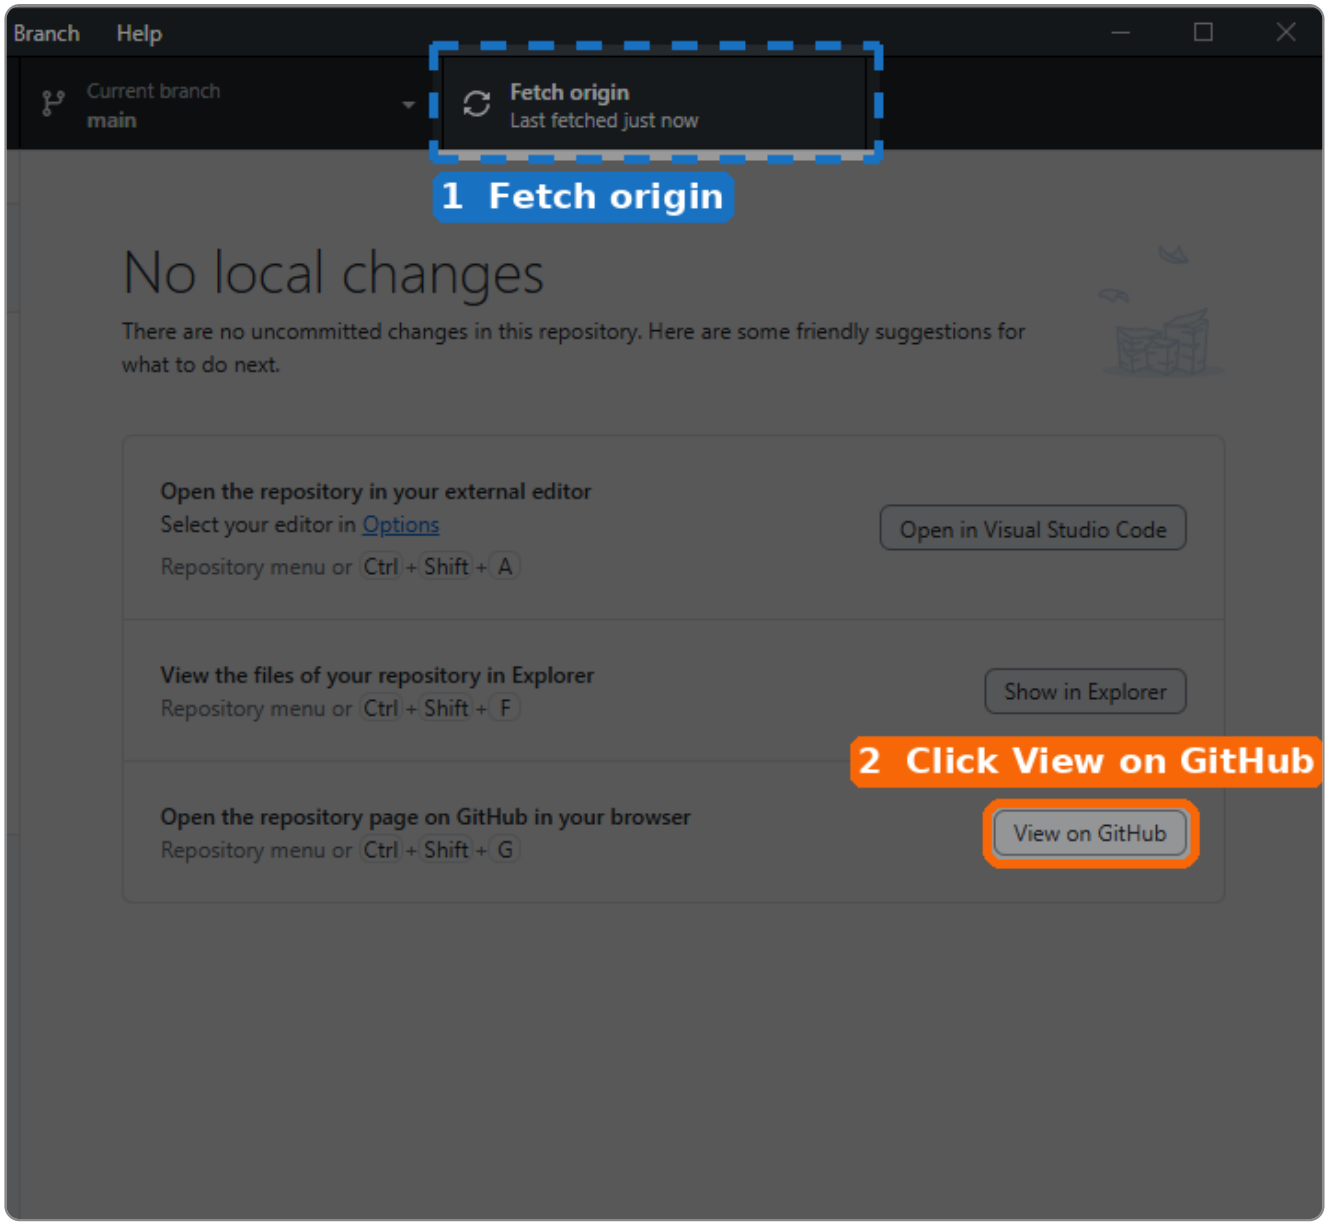

14

GitHub Desktop › your repository

Check the button at the top now says **Fetch origin**.

Click **View on GitHub**.

Fetch origin means your project is on GitHub.

15

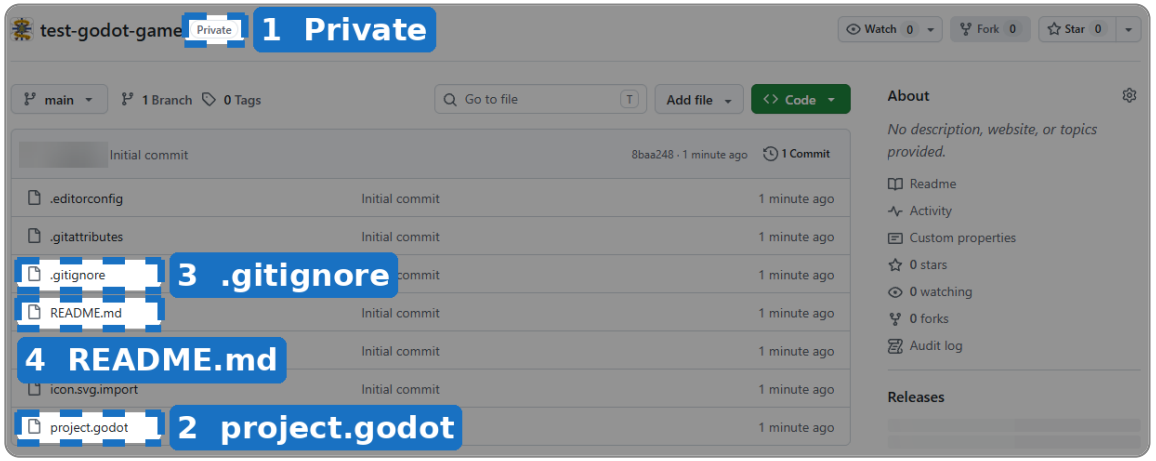

Chrome › GitHub › your repository

Check it says **Private** next to the name.

Check you see `project.godot`, `.gitignore` and `README.md`.

There's no `.godot` folder here. That's right: the .gitignore keeps Godot's cache off GitHub.

> **Check:** the address starts with:
>
> `github.com/Marcellin-College-DGT`

Every lesson
Commit your changes and push them to GitHub before you leave (see the guide Commit and push with GitHub Desktop).

Leave the folder where it is
Don't move or rename your game's folder in `Documents` › `GitHub`. Godot and GitHub Desktop both look for it there.

Checkpoint

- [ ] My Godot project is a repository in GitHub Desktop.
- [ ] It's published to `Marcellin-College-DGT` and it's private.
- [ ] I can see `project.godot` on GitHub.
