Save a version as a zip

Digital Technologies · School and personal computers

You will

- zip your project folder at the end of a lesson
- name each version `-v1`, `-v2`, `-v3`…
- know how to hand the zip in

You need

- your project folder in `Google Drive (G:)` › `My Drive`
- all your files saved in VS Code (`Ctrl+S`)

Click here

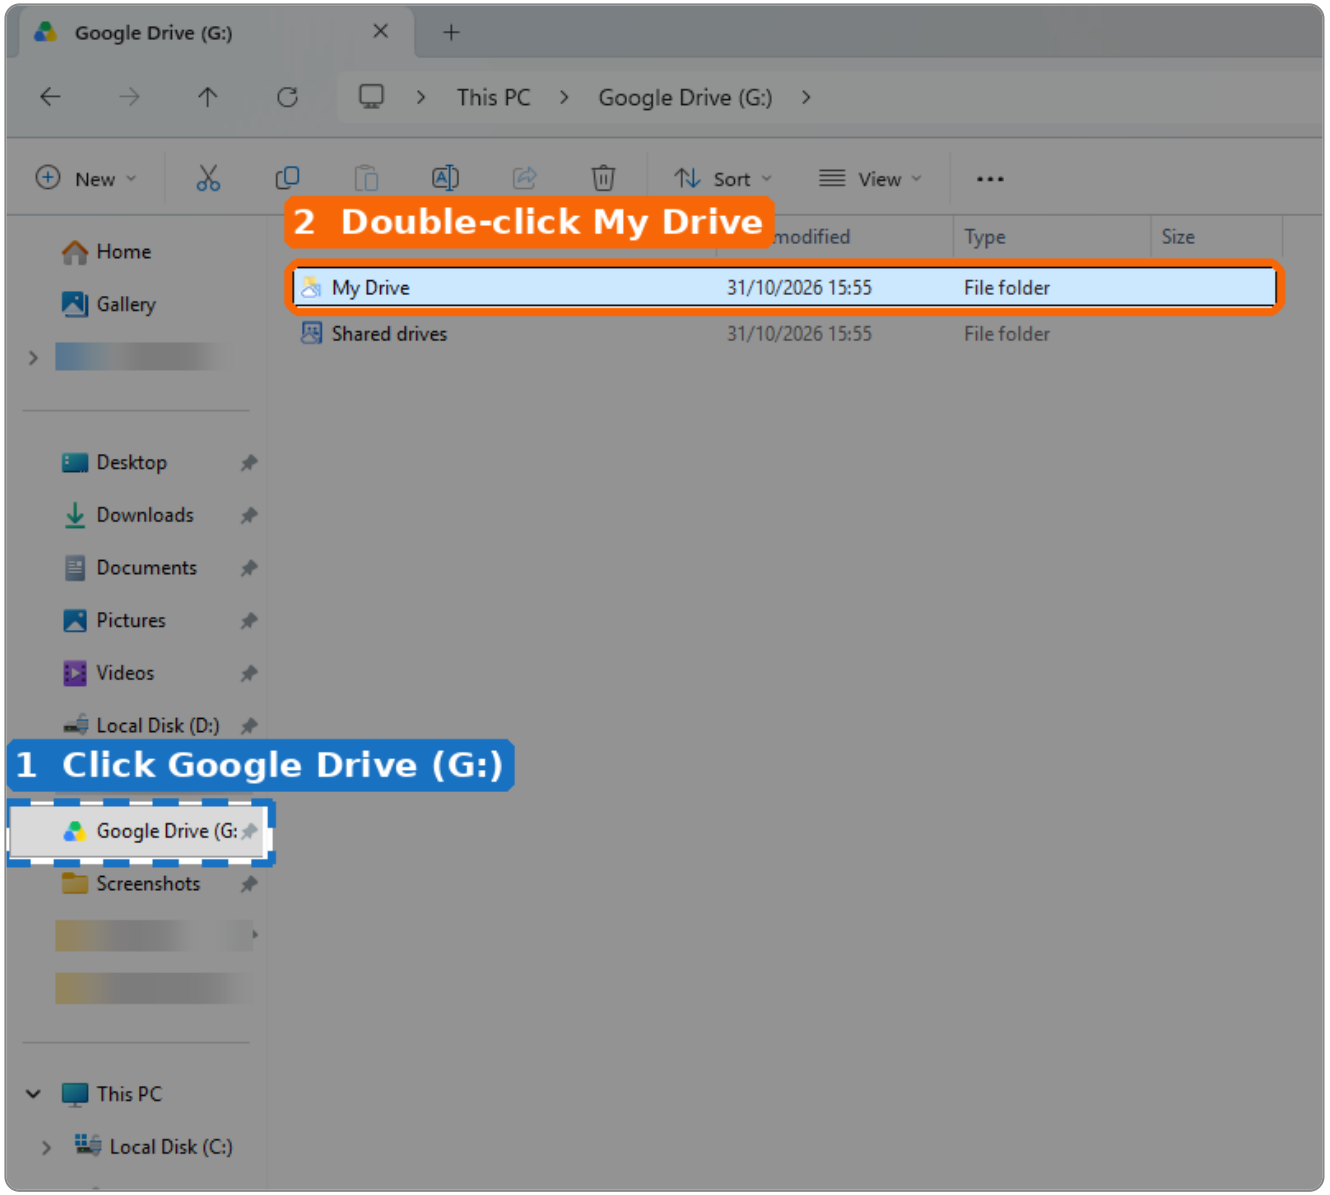

Look here

1

File Explorer

In the left pane, click **Google Drive (G:)**.

Double-click **My Drive**.

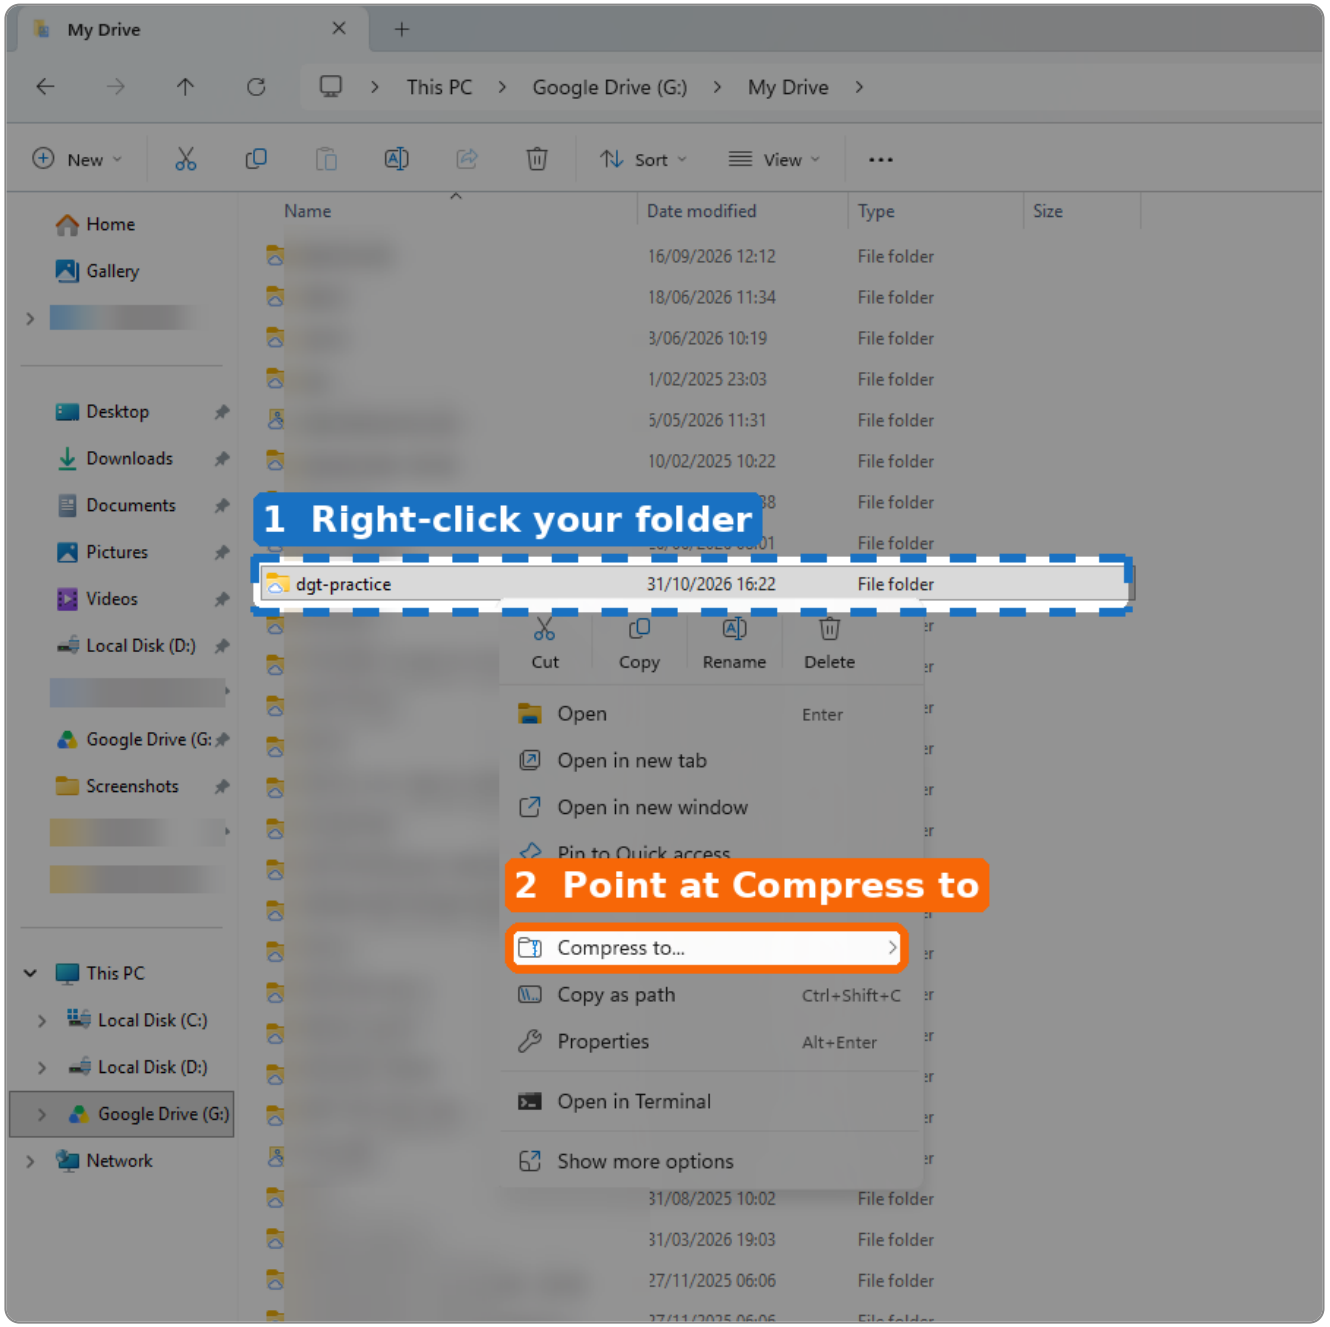

2

File Explorer › My Drive

Right-click your project folder, for example `dgt-practice`.

Point at **Compress to...**

Right-click the folder itself, not the files inside it.

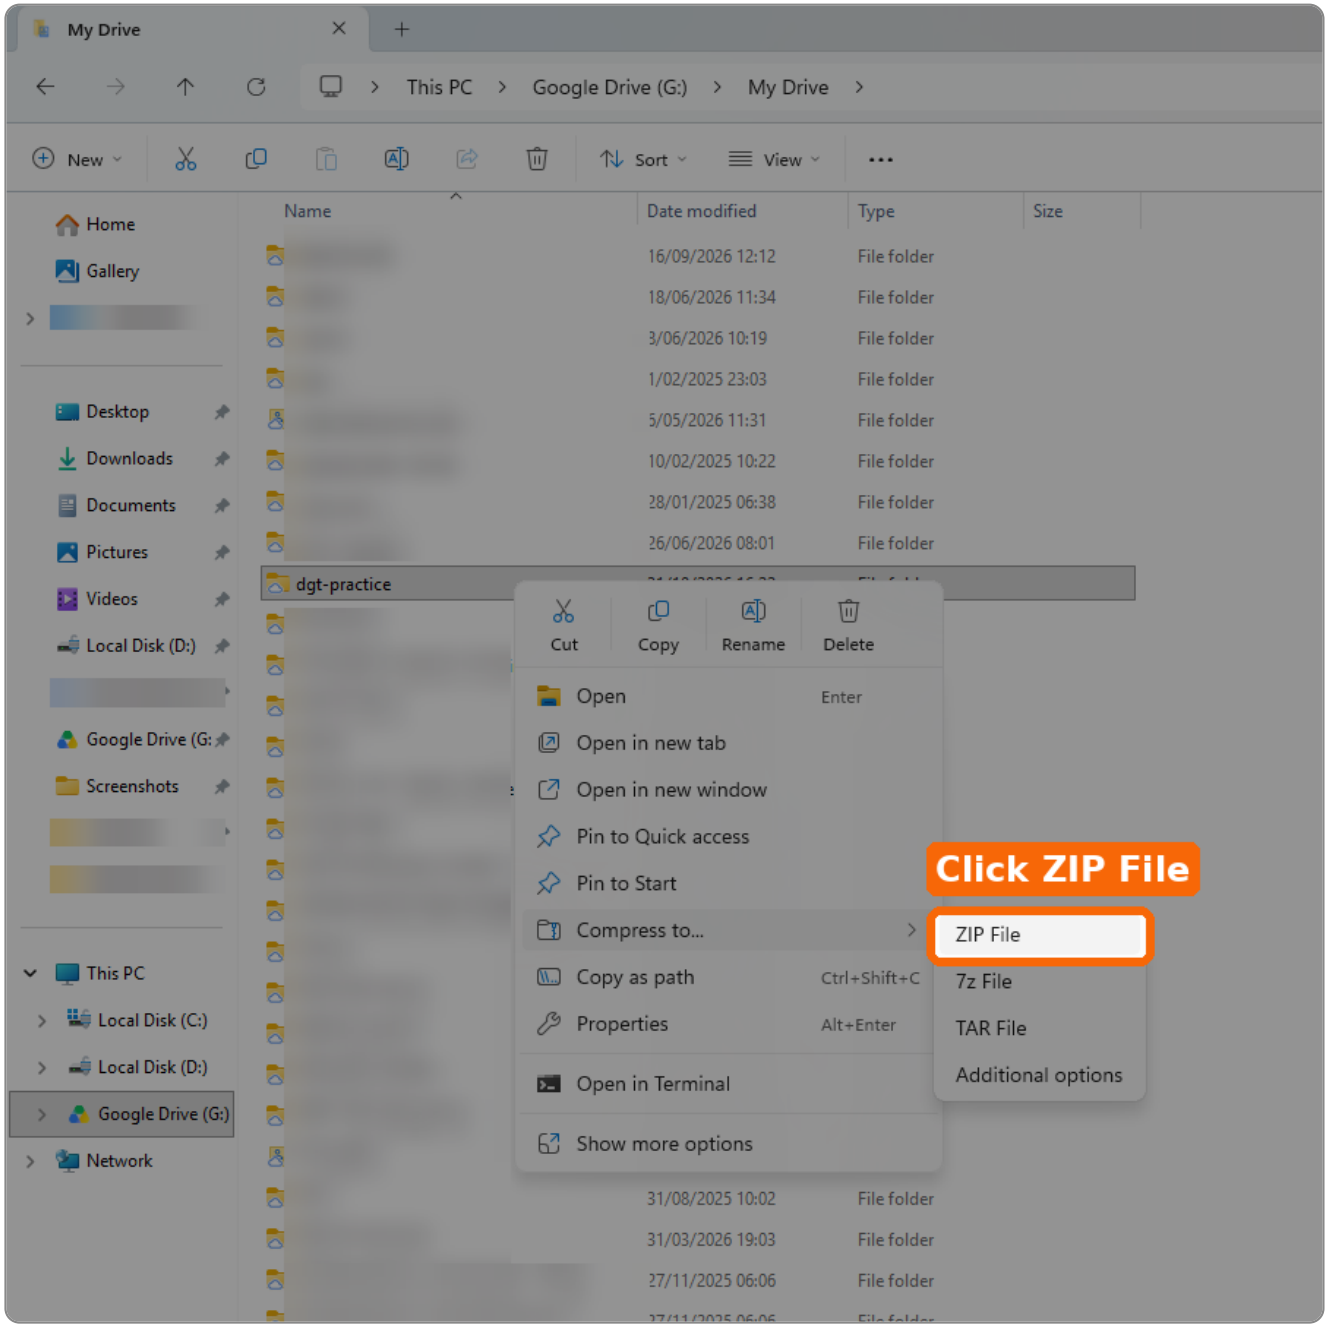

3

File Explorer › My Drive

Click **ZIP File**.

If something goes wrong
No Compress to...: click **Show more options**, then **Send to › Compressed (zipped) folder**.

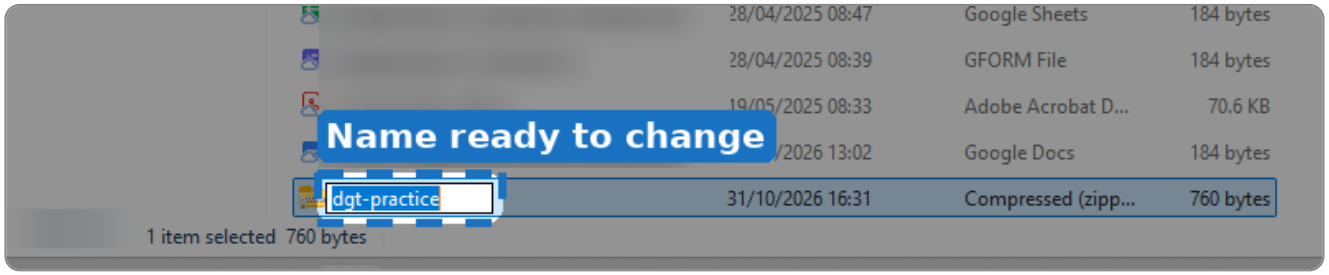

4

File Explorer › My Drive

A new zip appears, with its name ready to change.

It may appear at the bottom of the list.

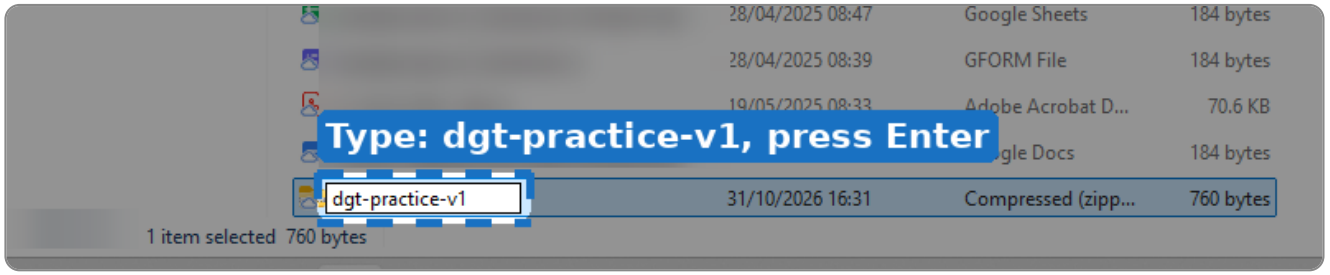

5

File Explorer › My Drive

Type `dgt-practice-v1`.

Press `Enter`.

Don't type `.zip`. Windows adds it for you. Next lesson, use `-v2`, then `-v3`.

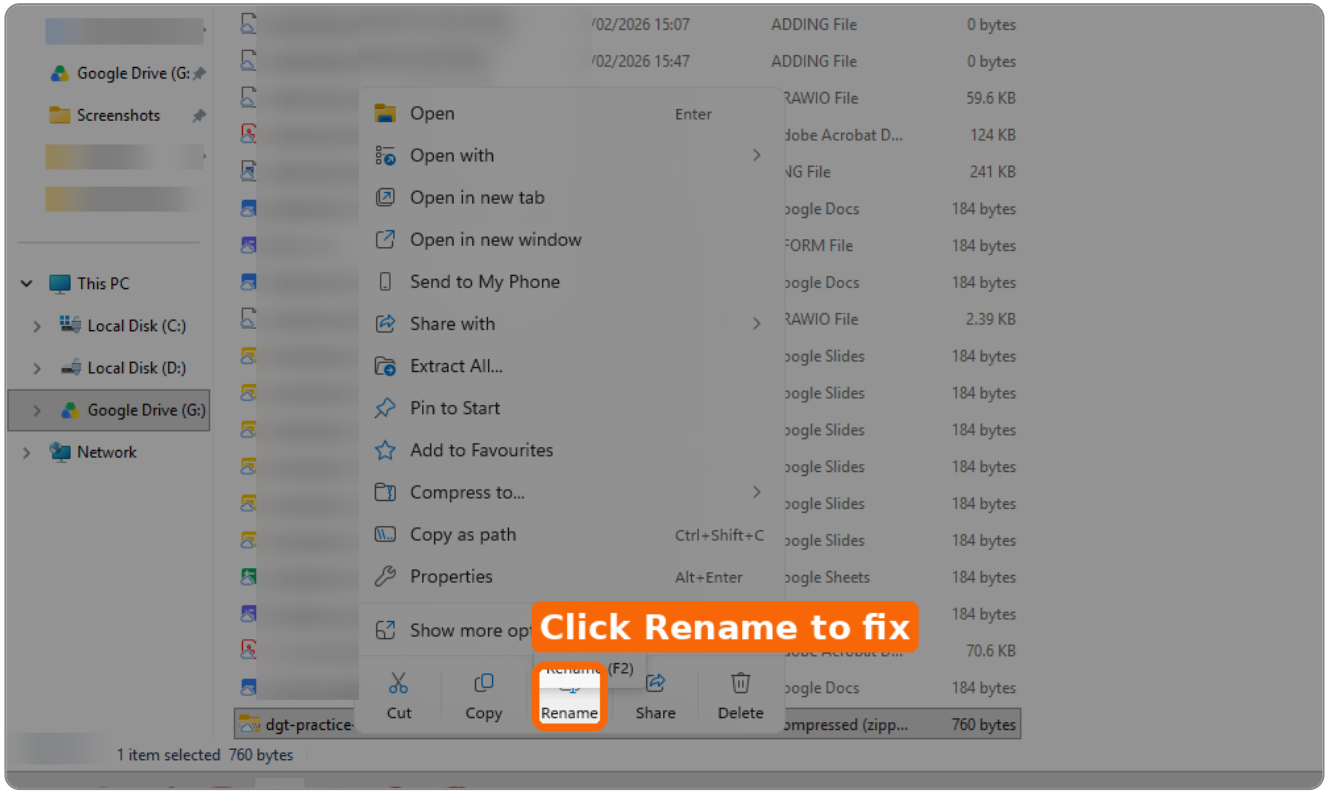

6

File Explorer › My Drive

Check the zip's name.

Wrong name? Right-click the zip and click **Rename**, or press F2.

> **Check:** the zip is called `dgt-practice-v1`.

A version every lesson
At the end of every lesson, zip your folder with the next number. If something breaks, you can go back to an older version.

Hand it in
Attach your newest zip to your assignment and turn it in (see the guide Hand in on Google Classroom).

Keep working in the folder
Don't open the zip to work in it. The zip is a copy for saving and handing in.

Checkpoint

- [ ] I zipped my project folder.
- [ ] I named the zip with a version number, like `-v1`.
