# Screenshot and paste

Digital Technologies · School and personal computers

**You will**

- take a screenshot of part of your screen
- paste it into a Google Doc, such as your evidence template

**You need**

- a Windows computer
- the thing you want to capture, open on screen
- a Google Doc to paste into

 Click here

 Look here

1

Chrome › the page you want

Open the page or app you want to capture.

Press Windows + Shift + S.

Hold the Windows and Shift keys, then press S.

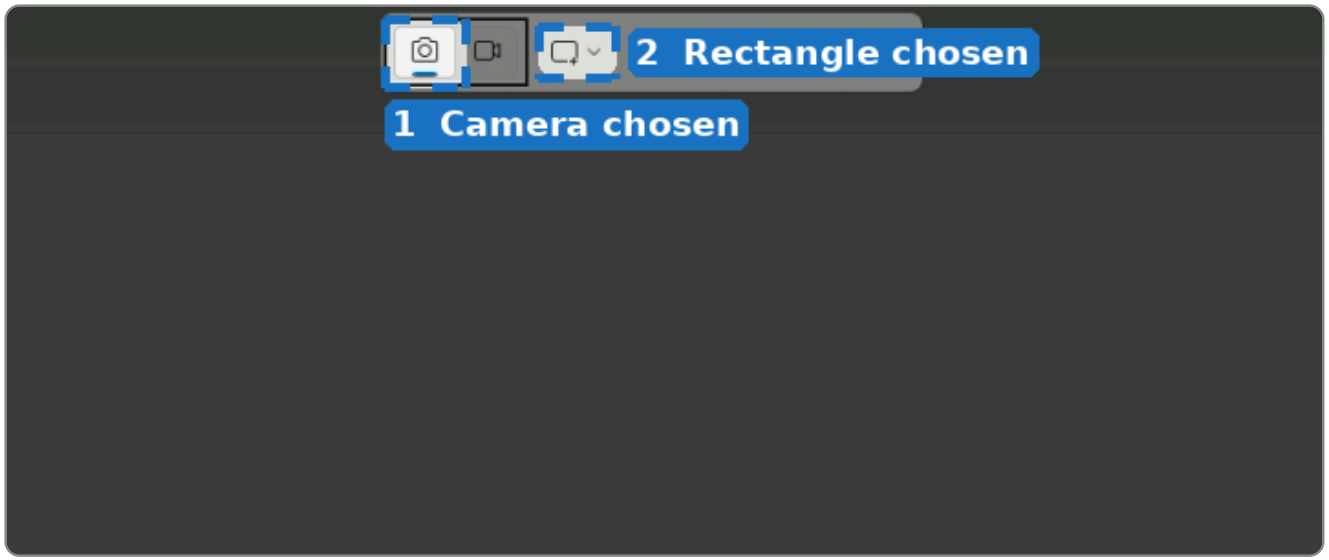

**2**

Windows › Snipping bar

The screen goes darker and a bar appears at the top.

Check the camera and the **Rectangle** shape are chosen.

Your mouse pointer becomes a cross.

**If something goes wrong**
**Nothing happens:** some school computers block this shortcut. Press `PrtScn` on its own instead. Still nothing? Click **Start**, type `snipping tool`, open **Snipping Tool** and click **New**.

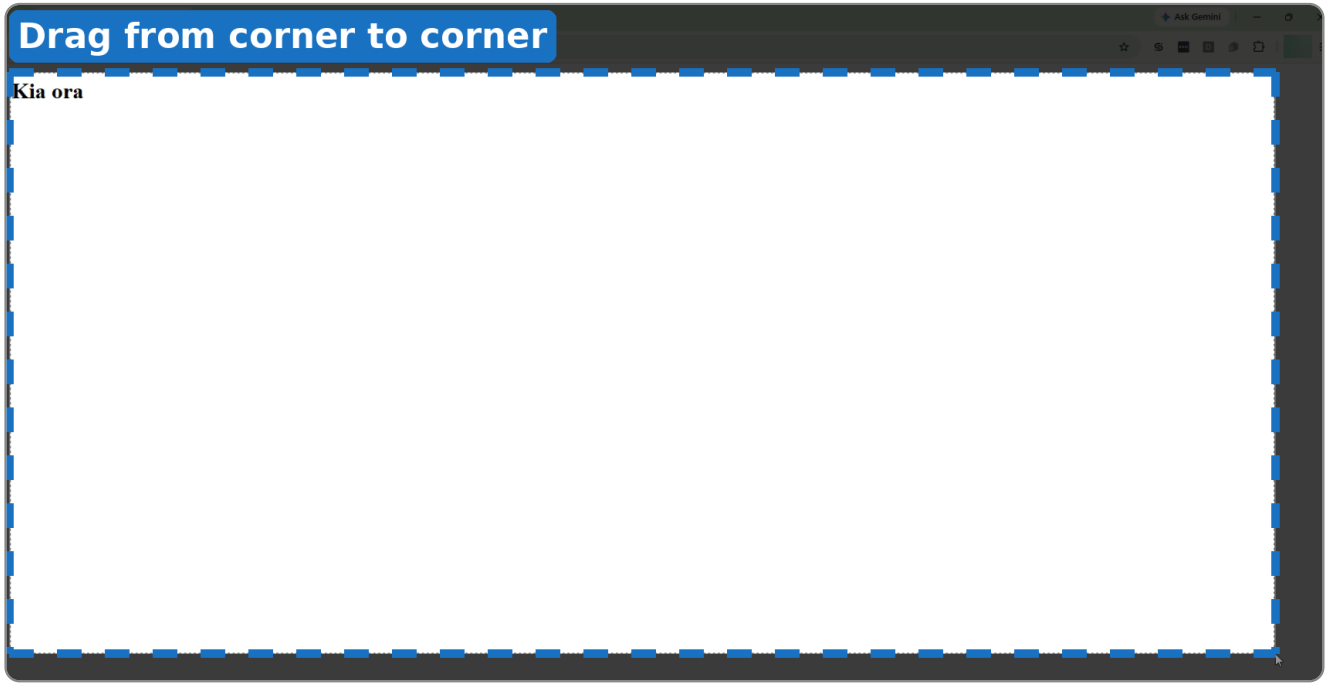

3

Windows › Snipping

Drag from one corner of what you want to the opposite corner.

Let go of the mouse.

The part inside the box is copied. You won't see a picture yet.

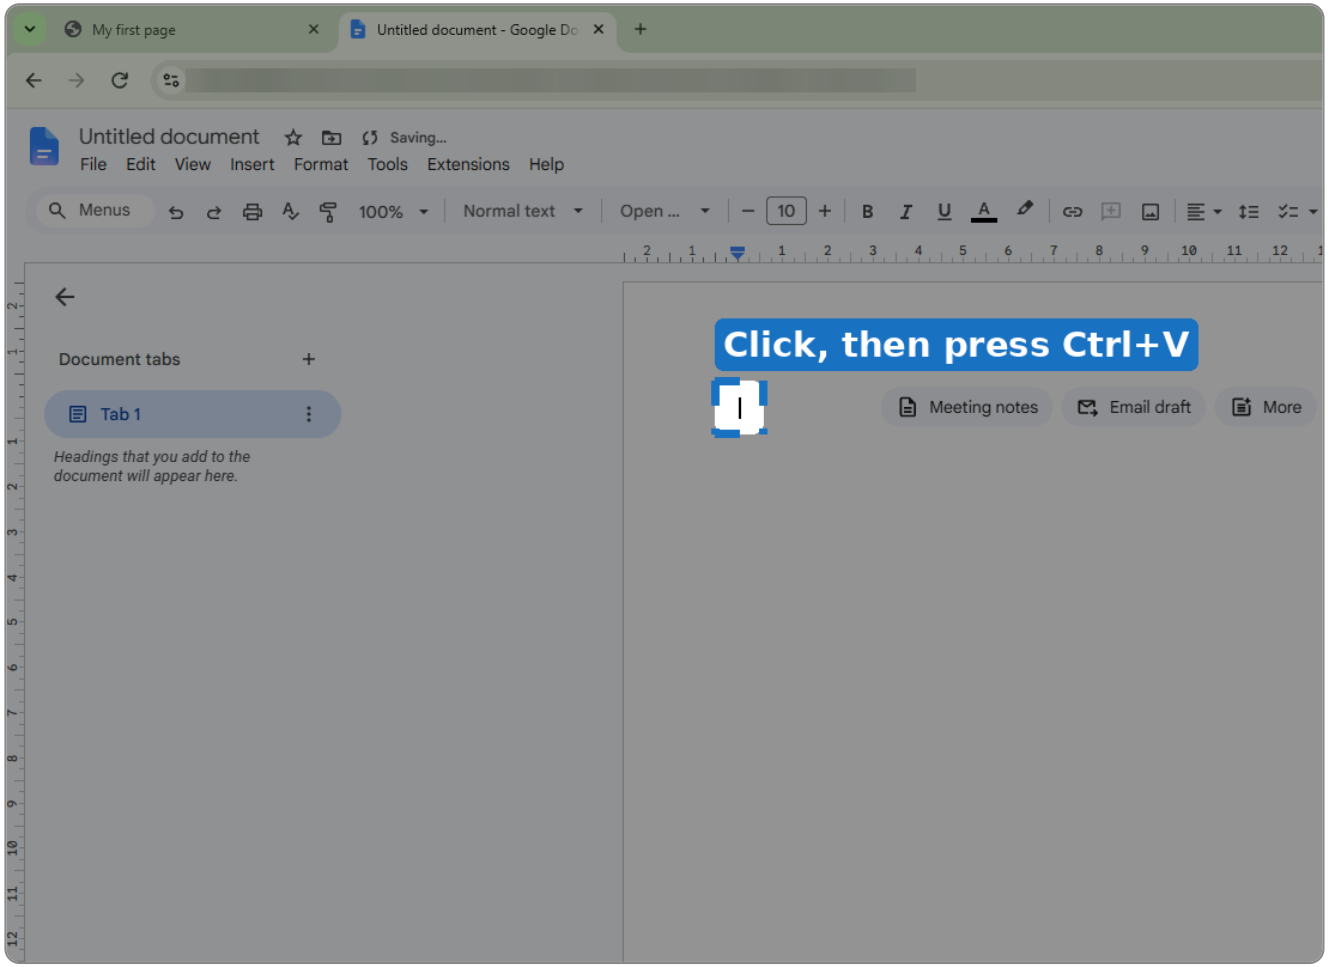

4

Google Docs › your document

Click where you want the picture to go.

Press Ctrl + V.

**5**

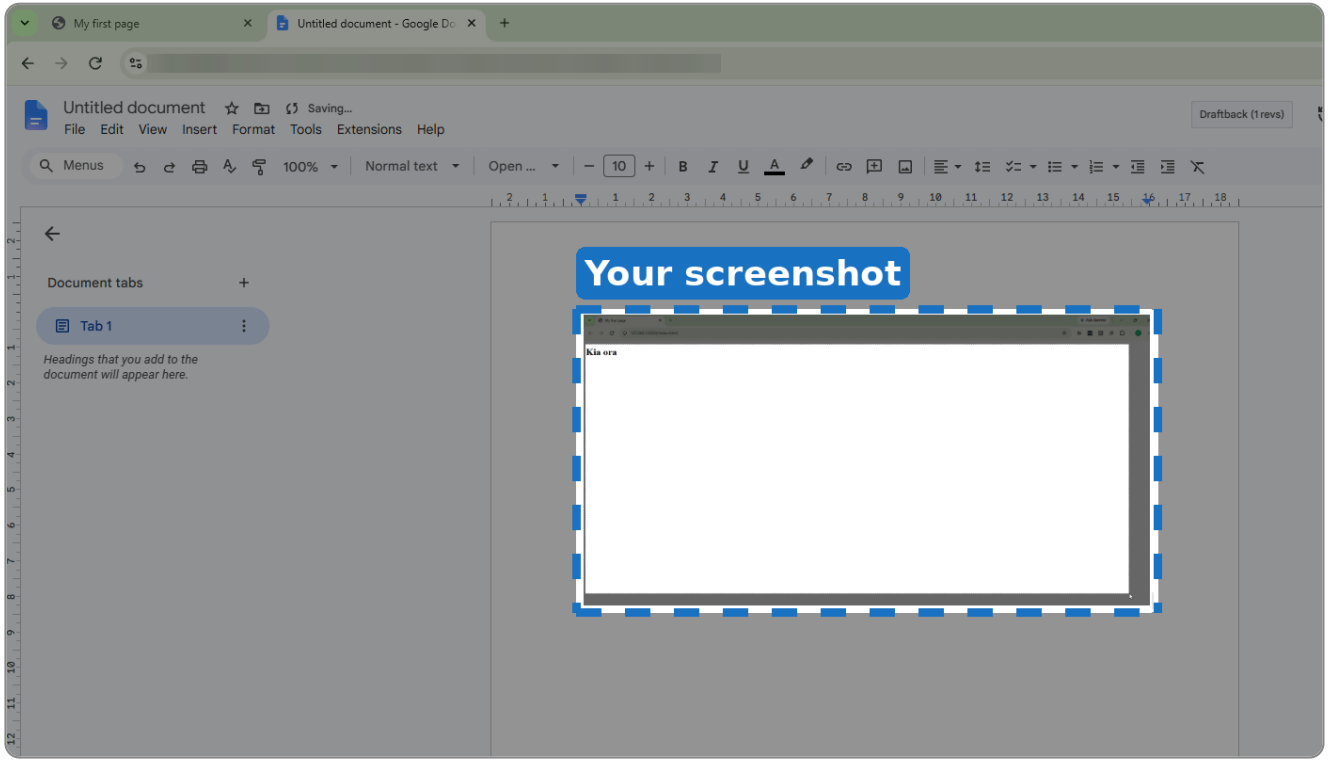

Google Docs › your document

Look at your picture.

> **Check:** your screenshot appears in the document.

**If something goes wrong**

**Nothing pastes:** the screenshot was lost. Take it again, then press Ctrl + V straight away.

**Capture only what you need**
Drag the box around just the part that shows your work, so it's easy to read.

**Shortcut not working?**
Press `PrtScn` on its own. It opens the same snipping bar. Or use the **Snipping Tool** app: **Start**, type `snipping tool`, open it and click **New**.

**Check before you paste**
Make sure the screenshot doesn't show anyone's name, email or personal information.

**Checkpoint**

- [ ] I can take a screenshot with `Windows` + `Shift` + `S`.
- [ ] I can paste it into a Google Doc with `Ctrl` + `V`.
