Set your Git name and email

Digital Technologies · School and personal computers

You will

- tell Git your name and school email
- check Git has saved them

You need

- VS Code with a folder open
- Git installed (it is on school computers)
- your school email address

Before you start

- Do this once on each computer you use. Your name and email go on every commit you make, so your kaiako can see your work.

 Click here  Look here

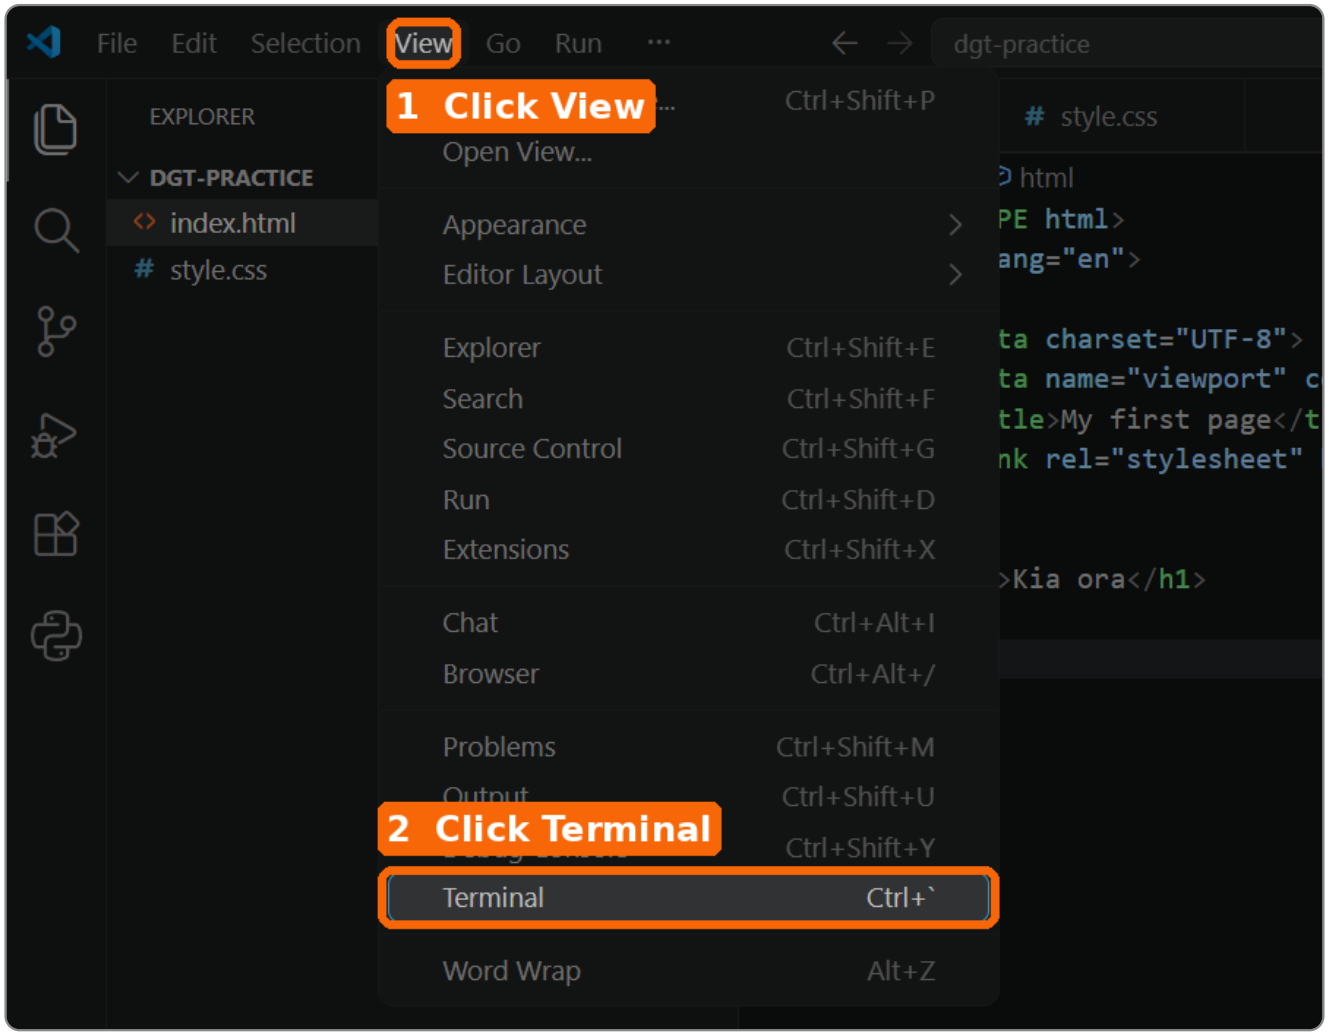

1

VS Code

Click **View**.

Click **Terminal**.

The shortcut is Ctrl + `.

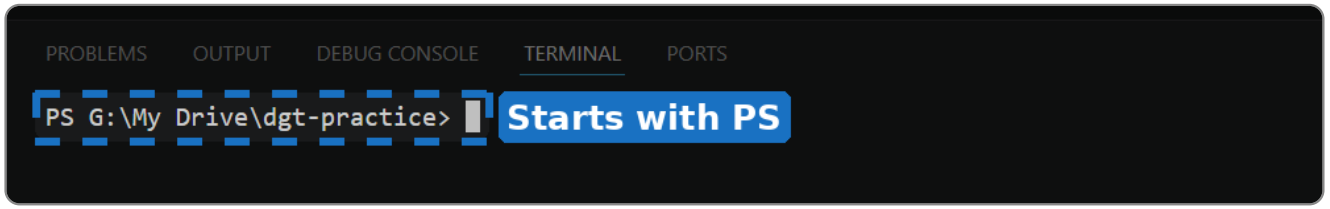

2

VS Code › Terminal

Look at the panel at the bottom.

This is the terminal. You type commands here and press Enter to run them.

> **Check:** a line starts with `PS` and ends with `>`.

3

VS Code › Terminal

Type this, with your first and last name inside the quotes:

```
git config --global user.name "Your Name"
```

Press `Enter`.

> **Check:** a new empty line appears. No message means it worked.

4

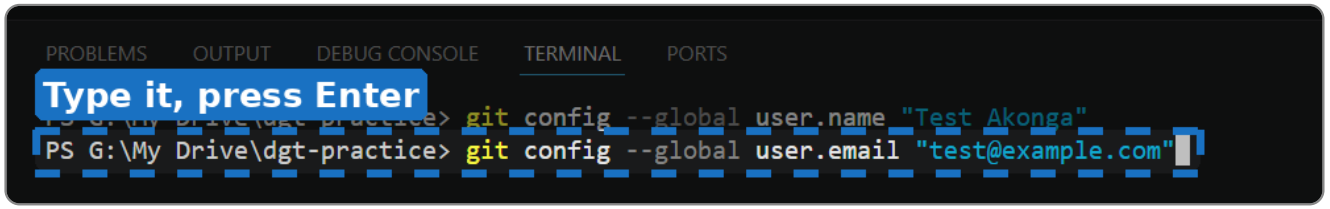

VS Code › Terminal

Type this, with your school email inside the quotes:

```
git config --global user.email "you@school.nz"
```

Press `Enter`.

Use the same school email as your GitHub account.

5

VS Code › Terminal

Type this to check:

```
git config --global --list
```

Press `Enter`.

6

VS Code › Terminal

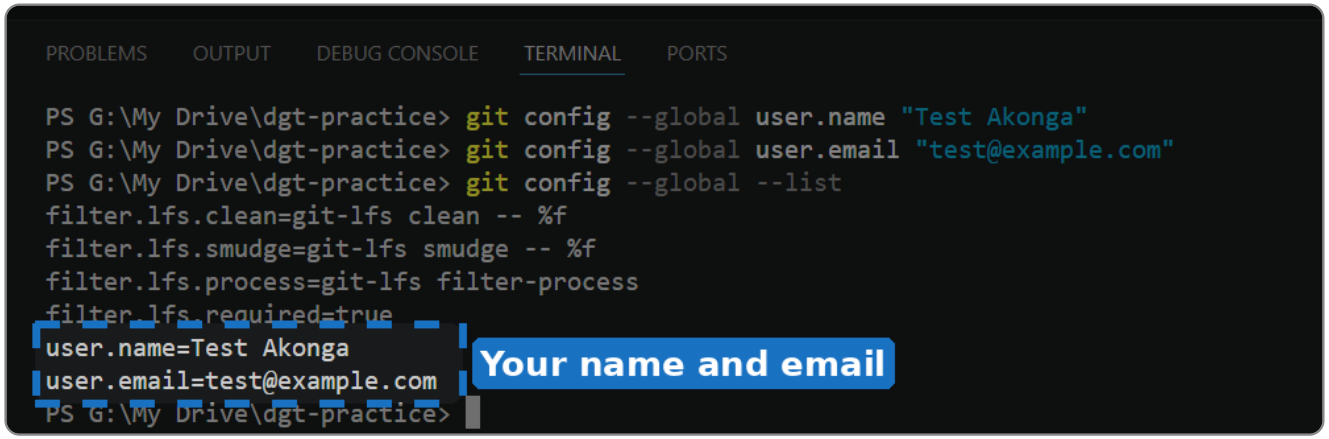

Find the `user.name=` and `user.email=` lines.

You may see other lines too. That's fine.

> **Check:** they show your name and your school email.

If something goes wrong

A spelling mistake: type the same command again with the right spelling. It replaces the old one.

Once on each computer

Git remembers your name and email on this computer. On a different computer, do this guide again.

Copying commands

Type commands exactly, including the spaces, dashes and quotes. Capitals matter.

Checkpoint

- [ ] I set my Git name and school email.
- [ ] I checked them with `git config --global --list`.
